   Calculation: 648 \div 4 = 400 \div 4 + 200 \div 4 + 48 \div 4 = 100 + 50 + 12 = 162

   Check: 162 \times 4 = 648

   Answer: Frank had £162.

a) How much money could Neil have? He has more than £50 but less than £100. He could change his money exactly into £2 coins or £5 notes.

If divisible by 5, numbers must have units digit 5 or 0, but if all divisible by 2, they cannot have units digit 5. Possible amounts: £60, £70, £80, or £90.

b) How many pupils can be in this class? There are less than 30 pupils. The pupils can sit in groups of 2 or 3 or 4 without any pupil being left out.

Number in class must be a multiple of 2, 3, and 4. Possible numbers: 12 or 24.

Is it possible to answer the question with the data given? If it is, solve it.

a) 10 kg of bananas costs £9.40. What is the price of 1 kg of bananas?

£9.40 = 940 p; 940 ÷ 10 = 94 p

b) Steve bought 10 different bars of chocolate and paid £12.00 altogether. What was the price of 1 bar of chocolate?

Cannot be solved. Different bars might have different prices.

c) Karen is 9 years old. She weighs 27 kg. What did she weigh when she was 1 year old?

There is no direct proportion between age and mass.

d) 3 men worked steadily and painted a 540 m fence in 9 days. How many days would it have taken 1 man to paint the same fence?

3 men → 9 days, 1 man → 9 days × 3 = 27 days

3. How could a 3-scoop ice-cream be made from vanilla or strawberry or lemon?
1. Write the data. Make a plan. Estimate, calculate, check and write the answer.

4 tickets cost £5.68. How much would 7 of these tickets cost?

Data: \[ \£5.68 = 568 \text{ p} \]

Plan: \[ 568 \div 4 \times 7 \]

\[ 600 \div 4 = 150; \quad 150 \times 7 = 1050 \]

Estimate: \[ 568 \div 4 = 125 + 15 + 2 = 142 \]

Calculation: \[ \frac{568}{4} = 500 \div 4 + 60 \div 4 + 8 \div 4 = 125 + 15 + 2 = 142 \]

\[ 7 \times 142 = 994 \]

Answer: 7 tickets would cost £9.94.

3. A marble is dropped into this maze. It has an equal chance of falling to the left or to the right.

a) In how many ways can the marble come out at:
   i) A 1 way
   ii) B 3 ways
   iii) C 3 ways
   iv) D 1 way

b) Where is it more likely to come out?
   B or C as each has a 3 out of 8 chance of happening

c) What is the ratio of the chance of it coming out at A, B, C or D?
   \[ A : B : C : D = 1 : 3 : 3 : 1 \]

4. Do the operations in the correct order. Do the calculations in your exercise books.

a) \[ 1500 \div 5 + 25 \times 4 = 400 \]
   b) \[ (712 - 268) \div 2 + 20 = 242 \]
   c) \[ 20 \times 90 - 640 \div 8 = 1720 \]
   d) \[ 735 \div 7 \times 3 = 315 \]
   e) \[ 591 - 9 \times 50 + 41 = 182 \]
   f) \[ 111 - 68 - 180 \div 6 = 13 \]
   g) \[ 1827 \div 3 - 360 \div 40 = 600 \]
   h) \[ (823 - 157) \div 3 \times 2 = 444 \]

5. Colour equal values in the same colour.

\[ \begin{align*}
1 \text{ tenth of } 200 & = 160 \div 8 \\
1800 \div 90 & = 200 \div 5 = 40 \\
2 \text{ thirds of } 300 & = 450 \div 5 - 70 \\
\end{align*} \]
Write these numbers as Roman numerals. Follow the example.

a) \( 743 = (500 + 200) + (50 – 10) + 3 = \text{DCC} + \text{XL} + \text{III} = \text{DCCXLIII} \ldots \)

b) \( 287 = 200 + (50 + 30) + (5 + 2) = \text{CC} + \text{LXXX} + \text{VII} = \text{CCLXXXVII} \ldots \)

c) \( 934 = (1000 - 100) + 30 + (5 – 1) = \text{CM} + \text{XXX} + \text{IV} = \text{CMXXXIV} \ldots \)

d) \( 1099 = 1000 + (100 - 10) + (10 – 1) = \text{M} + \text{XC} + \text{IX} = \text{MXCIX} \ldots . \)

a) Change the Roman numerals to Arabic numbers.

\[
\begin{align*}
\text{DIX} & = 509 \\
\text{MCMXLV} & = 1945 \\
\text{CMIV} & = 904 \\
\text{CDXVI} & = 416 \\
\text{MCXI} & = 1111 \\
\text{CMXCIX} & = 999
\end{align*}
\]

b) Write the Arabic numbers in decreasing order.

\[1945 > 1111 > .999 > .904 > .509 > .416\] Counting from left to right, \(999 - 509 = 490\)

\[= \text{CDXC} \]

c) Subtract the 5th number from the 3rd number. Write the difference as Roman numerals.

\[999 - 509 = 490\]

\[= \text{CDXC} \]

d) Divide the 2nd number by 11. Write the quotient as Roman numerals.

\[111 \div 11 = 101\]

\[= \text{CIX} \]

a) When do you think the church was built? \[1791\]

b) What Roman number is on the crypt if it was built 153 years before the main church? \[\text{MDCXXXVIII} \ldots (1638) \ldots \]

\end{align*}
\]

b) Use the rule to find the secret numbers and the missing signs. \((<, =, >)\)

\[
\begin{align*}

Correct the equations.

\[ \text{XII} + \text{III} = \text{X} \]
\[ \text{XI} + \text{XXX} = \text{X} \]
\[ \text{VII} - \text{IV} = \text{III} \]
\[ \text{XII} - \text{III} = \text{IX} \]
\[ \text{XL} - \text{XXX} = \text{X} \]

Join up the equal values.

\[ \text{CCXXXV} \times \text{III} = \text{DCCV} \]

d) \[ 847 + 7 = 700 \div 7 + 140 \div 7 + 7 \div 7 = 100 + 20 + 1 = 121 \]

\[ \text{DCCCXLVII} \div \text{VII} = \text{CXXI} \]

a) Which Roman numerals could be written instead of the shapes to make the statements true?

\[ \begin{array}{c|c|c|c|c}

Make a plan. Do the calculation, check it and write the answer in a sentence.

a) Tim has £648, 6 times the amount Laura has. How much does Laura have?

Plan:

Laura: £648 \div 6

Calculation: 648 \div 6 = 600 \div 6 + 48 \div 6 = 100 + 8 = 108

Check:

£108 \times 6 = £648

Answer: Laura has £108.

b) Gordon has £648. Lenny has twice as much. How much does Lenny have?

Plan:

Lenny: 2 \times £648

Calculation: 648 \times 2 = 600 \times 2 + 40 \times 2 + 8 \times 2 = 1200 + 80 + 16 = 1296

Check:

£1296 \div 2 = £648

Answer: Lenny has £1296.

Calculation: 1547 \div 7 = 1400 \div 7 + 147 \div 7 = 200 + 21 = 221

Check:

£2.21 \times 7 = £15.47

Answer: Each ticket cost £2.21.

b) John had to fill an empty 540 litre container from a 1200 litre container full of water. He used a 4 litre and a 5 litre bucket to transfer the water each time. How many journeys did he make?

Plan:

540 litres \div (4 litres + 5 litres)

Calculation: 540 \div 9 = 60

Check:

60 \times 9 = 540

Answer: John made 60 journeys.
