3 Henry cannot make up his mind which cinema, B or C, to go to from his house at A.

a) Which cinema did Henry go to? [ ]

b) When did he change his mind? [ ]

c) When did he start to run? [ ]

The graph shows what Henry did.
1 Two groups of pupils are in a competition to see which of them does better in a maths test out of 8 marks.

Both groups contain 8 pupils but their marks are similar. They need one overall mark for each group to make the comparison easier and decide to use the mean value.

Calculate the mean mark for each group and compare them. Fill in the missing sign.

Group A: 8, 8, 7, 5, 6, 8, 6, 7 (marks)  
Group B: 6, 6, 6, 7, 7, 7, 8, 8

Mean:  
Mean:

2 Solve the problem in your exercise book and write the answer here.

Two groups of children collected blackberries. There were 6 children in Group A and 8 children in Group B.

The members of Group A collected these amounts of blackberries:

1.2 kg, 0.8 kg, 1.6 kg, 2.4 kg, 0.6 kg, 0.9 kg

The members of Group B collected these amounts of blackberries:

0.9 kg, 1.4 kg, 1.2 kg, 0.6 kg, 2 kg, 1 kg, 0.45 kg, 0.7 kg

Which group worked harder?

Answer: .................................................................

3 Draw graphs to show the data from Question 2.

Draw a red horizontal line at each mean.

Group A

Mean:

Group B

Mean:
The ages of the members of the *Cabbage* family are:
1 year, 3 years, 33 years, 34 years and 65 years

The ages of the members of the *Parsnip* family are:
10 years, 12 years, 19 years, 21 years, 42 years and 43 years.

a) Calculate the **mean** age of each family.

*Cabbage* family:

*Parsnip* family:

b) Both families are working in their gardens. Which family do you think will be able to do more work? Give a reason for your answer.

---

One summer's day in Budapest, the temperature was noted every two hours and recorded in this table.

<table>
<thead>
<tr>
<th>Time (hours)</th>
<th>0</th>

**HMC 2002, I Age 10**

In this addition, different letters stand for different digits and the same letters stand for the same digits. A is not less than 3.

b) What is: i) the smallest  

ii) the greatest  

possible sum?
Practise addition.

a)  
   i) \(3 + 2 = \)  
   ii) \(3 + 0 = \)  
   iii) \(3 + (-2) = \)  
   iv) \(3 + (-4) = \)  
   v) \(3 + (-6) = \)

b)  
   i) \(-3 + (-2) = \)  
   ii) \(-3 + 0 = \)  
   iii) \(-3 + 2 = \)  
   iv) \(-3 + 4 = \)  
   v) \(-3 + 6 = \)

c)  
   i) \(25 + (-41) + 12 + (-10) = \)  
   ii) \(-100 + (-30) + 78 + (-48) = \)  
   iii) \(5000 + (-2000) + (-3000) = \)  
   iv) \(-85000 + (-15000) + (-20000) = \)  
   v) \(-236700 + 0 = \)

Write an operation and calculate the answer.

a) Ian had £1500 in cash and was £400 in debt, then £300 of his debt was cancelled. What is his balance now?

   Balance: ____________________________

b) Lucy had £1500 in cash and was £400 in debt. She went on holiday and spent £1200. What is her balance now?

   Balance: ____________________________

Practise calculation.

a)  
   i) \(20 - (+14) = \)  
   ii) \(20 - (+36) = \)  
   iii) \(40 - (+40) = \)  
   iv) \(35 - (-20) = \)  
   v) \(-30 - (-10) = \)  
   vi) \(-30 - (-30) = \)  
   vii) \(-20 - (-50) = \)  
   viii) \(-20 - (+30) = \)

b)  
   i) \(20 + (-14) = \)  
   ii) \(20 + (-36) = \)  
   iii) \(40 + (-40) = \)  
   iv) \(35 + (+20) = \)  
   v) \(-30 + (+10) = \)  
   vi) \(-30 + (+30) = \)  
   vii) \(-20 + (+50) = \)  
   viii) \(-20 + (-30) = \)

What is the smallest possible, 3-digit, positive integer which fulfils these conditions?

- If it is multiplied by 3, the result is also a 3-digit number.
- If it is multiplied by 4, the result is a 4-digit number.
Practise rounding:

a) to the nearest 10  
   6208 ≈ 6200
   14 035 ≈ 14 000
   90 455 ≈ 90 000
   383 ≈ 400
   9999 ≈ 10 000

b) to the nearest 100  
   6208 ≈ 6200
   14 035 ≈ 14 000
   90 455 ≈ 90 000
   383 ≈ 400
   9999 ≈ 10 000

 c) to the nearest tenth  
   6208 ≈ 62.0
   14 035 ≈ 140.3
   90 455 ≈ 904.5
   383 ≈ 3.8
   9999 ≈ 99.9

KS2A 1999 Q.9  
Calculate 538 – 396  [1 mark]

Calculator allowed

KS2B 1999 Q.5  
Write in the four missing digits.  
Put one digit in each box.  
\[\square + \square = 198\]  [1 mark]

KS2A 1999 Q.20  
Here is a graph.  
a) The points A, B and C are equally spaced.  
   What are the coordinates of the point B?  
   \[(\ , \ )\]  [1 mark]

b) Point D is directly below point C.  
   What are the coordinates of the point D?  
   \[(\ , \ )\]  [1 mark]

HMC 2002, I Age 10  
In a race, the runners are started 1 minute after each other. The first runner covers 174 m each minute and the second runner covers 182 m each minute.  
What distance will be between the two runners:  
a) 10 minutes after the first runner started  
b) 30 minutes after the first runner started?
### 1. Practise calculation.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a) ( \frac{3}{5} + \frac{4}{5} + \frac{7}{10} )</td>
<td>b) ( \frac{3}{8} + \frac{1}{7} )</td>
</tr>
<tr>
<td>c) ( 3 \frac{3}{4} + \frac{3}{8} )</td>
<td>d) ( \frac{5}{7} - \frac{3}{7} )</td>
</tr>
<tr>
<td>e) ( 1 \frac{5}{6} - \frac{2}{3} )</td>
<td>f) ( \frac{7}{9} - \frac{1}{3} - \frac{1}{9} )</td>
</tr>
</tbody>
</table>

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a) ( 3 \times 4 = )</td>
<td>b) ( \frac{3}{4} \times 8 = )</td>
</tr>
<tr>

<td>d) ( \frac{1}{3} \div 2 = )</td>
</tr>
<tr>
<td>e) ( 6 \div 3 = )</td>
<td>f) ( \frac{5}{9} \div 5 = )</td>
</tr>
</tbody>
</table>

### 2. Practise calculation.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a) ( 2 \times 4 = )</td>
<td>b) ( \frac{3}{4} \times 8 = )</td>
</tr>
<tr>
<td>c) ( \frac{3}{8} \times 5 = )</td>
<td>d) ( \frac{1}{3} \div 2 = )</td>
</tr>
<tr>
<td>e) ( 6 \div 3 = )</td>
<td>f) ( \frac{5}{9} \div 5 = )</td>
</tr>
</tbody>
</table>

### 3. What is the largest possible, 3-digit, positive integer which fulfils **both** conditions?

- If it is multiplied by 3, the result is also a 3-digit number.
- If it is multiplied by 4, the result is a 4-digit number.

### 4. In a school the ratio of boys to girls in Year 5 is 5 : 7. There are 12 more girls than boys in Year 5. How many pupils are in Year 5?

### 5. What is the smallest possible natural number that has a remainder of 1 when divided by 2, 3, 4, 5 or 6 but which can be divided by 7 exactly?

### 6. What are the four consecutive **odd** numbers which add up to 80?
Practise calculation.

1. a) \(37 - 80 + 43 + 64 - 44 = \)
   b) \(3.7 - 8 + 4.3 + 6.4 - 4.4 = \)
   c) \(5 \times 31 \times 25 \times 20 \times 4 = \)
   d) \(2 \times 50 \div 4 \times 27 = \)

2. Practise calculation.
   a) \(30 - 16 \div 4 + 9 \times 5 + 15 = \)
   b) \(72 \div 8 - 20 \times 6 \div 5 + 300 \div 100 = \)
   c) \(20 \div 8 \times 6 + 3 \times 12 \div 9 + 15 \div 5 - 5 = \)

3. Do each calculation in two different ways.
   a) \(650 - (450 + 120) = \)
      or:
      b) \(650 - (450 - 120) = \)
      or:
      c) \(50 \times (12 + 38) = \)
      or:
      d) \((200 - 180) \times 7 = \)
      or:
      e) \((90 + 72) \div 18 = \)
      or:
      f) \(600 \div (25 \times 6) = \)
      or:

4. Which positive, whole numbers make all three inequalities true at the same time?
   - \(3 \times (5 + \square) < 35\)
   - \(8 + \square > 11\)
   - \(20 - 3 \times \square \leq 9\)

\[\square: \text{...............}\]

Mr. Jones has two sizes of square paving stones. He uses them to make a path.

The path measures 1.55 metres by 3.72 metres. Calculate the width of a small paving stone. Show your method. You may get a mark. [2 marks]

**HMC 2002, II Age 10**

Solve the problem in your exercise book.

Some children and their Dads went on a journey by train. There were 10 Dads with 1 child each, 10 Dads with 2 children each and 10 Dads with 3 children each. The group took up the 3 coaches at the front of the train and each child was in the same coach as his or her father.

How could they sit so that the number of Dads and the number of children were the same in each of the 3 coaches?
Fill in the missing numbers and signs. \( 843 + 157 = 1000 \)

a) \( 843 + (157 + 36) = 1000 + \)  

b) \( 843 + (157 + k) = 1000 + k \)

c) \( (843 + 41) + 157 = 1000 + 41 \)

d) \( (843 + n) + 157 = 1000 + \)  

e) \( 843 + (157 - 69) = 1000 - 69 \)

f) \( 843 + (157 - t) = 1000 - \)  

g) \( (843 - 55) + 157 = 1000 - 55 \)

h) \( (843 - u) + 157 = 1000 - u \)

i) \( (843 + 16) + (157 + 16) = 1000 \)

j) \( (843 + x) + (157 + x) = 1000 \)

k) \( (843 + 72) + (157 - 72) = \)  

l) \( (843 + y) + (157 - y) = \)  

Fill in the missing numbers and signs. \( 685 - 185 = 500 \)

a) \( (685 + 15) - 185 = 500 + \)  

b) \( (685 + a) - 185 = 500 + a \)

c) \( 685 - (185 + 23) = 500 - 23 \)

d) \( 685 - (185 + b) = 500 - \)  

e) \( (685 - 45) - 185 = 500 - 45 \)

f) \( (685 - c) - 185 = 500 - c \)

g) \( 685 - (185 - 30) = 500 - 30 \)

h) \( 685 - (185 - d) = 500 + \)  

i) \( (685 + 51) - (185 + 51) = \)  

j) \( (685 + e) - (185 + e) = \)  

k) \( (685 + 4) - (185 - 4) = 500 \)  

l) \( (685 + f) - (185 - f) = 500 \)

m) \( (685 - 10) - (185 + 10) = 500 \)

n) \( (685 - g) - (185 + g) = 500 \)

   Calculate  $286 \times 53$

   Show your working.
   You may get a mark.

   [2 marks]

4. What is the greatest 3-digit natural number in which the product of its digits is 108?
1. Do each calculation in two different ways.
   a) \[ 720 - (320 + 150) = \]
      or:
   b) \[ 720 - (320 - 150) = \]
      or:
   c) \[ 40 \times (11 + 29) = \]
      or:
   d) \[ (300 - 270) \times 7 = \]
      or:
   e) \[ (90 + 60) \div 15 = \]
      or:
   f) \[ 500 \div (20 \times 5) = \]
      or:

2. Compare the amounts. Fill in the missing signs. (\(<\, >\, \text{or}\, =\))
   a) \[ \frac{1}{2} \text{ of } 60 \quad \square \quad 50\% \text{ of } 60 \]
   b) \[ 40\% \text{ of } 50 \text{ m} \quad \square \quad 20\% \text{ of } 100 \text{ m} \]
   c) \[ \frac{3}{4} \text{ of } £100 \quad \square \quad 70\% \text{ of } £100 \]
   d) \[ 30\% \text{ of } 90 \text{ kg} \quad \square \quad 20\% \text{ of } 150 \text{ kg} \]
   e) \[ 20\% \text{ of } 5 \text{ km} \quad \square \quad \frac{2}{10} \text{ of } 5 \text{ km} \]
   f) \[ \frac{3}{5} \text{ of } £70 \quad \square \quad 60\% \text{ of } £75 \]
   g) \[ 75\% \text{ of } 2 \text{ litres} \quad \square \quad 1.75 \text{ litres} \]
   h) \[ \frac{1}{10} \text{ of } 42 \text{ km} \quad \square \quad 0.42 \text{ km} \]
   i) \[ 105\% \text{ of } 10 \text{ litres} \quad \square \quad 1 \frac{1}{5} \text{ of } 10 \text{ litres} \quad \square \quad 10.5 \text{ litres} \]

3. What is the greatest 3-digit, natural number in which the product of its digits is 72?
   \[ \text{Check:} \quad \square \quad \square \]

4. In a **magic square**, the sum of the numbers in each row, column and diagonal is the same. Complete these magic squares.
   a) \[
   \begin{array}{cc}
   11 & 7 \\
   9 & \\
   5 & 10 \\
   \end{array}
   \]
   b) \[
   \begin{array}{cc}
   10 & 3 \\
   5 & \\
   11 & 4 \\
   \end{array}
   \]
   c) \[
   \begin{array}{cc}
   14 & 12 \\
   10 & \\
   8 & \\
   \end{array}
   \]
These are the times when letters are collected from a post box.

What is the latest time that letters are collected on **Wednesdays**?  

Carla posts a letter at **10 a.m. on Monday**.  
How long will it be before it is collected?  

Gareth posts a letter on **Saturday at 4 p.m.**.  
When will it be collected from the post box?  

---

This diagram shows the distances of different towns from Birmingham.

Write the name of a town which is **between 30 and 50 miles** from Birmingham.

Use the diagram to estimate the distance in **miles** from **Birmingham** to **Mansfield**.

---

Emma parks her car at **9.30 am**.  
She collects the car at **1.20 pm**.  
How much does she pay?  

---

Dan and Mark both use the car park.  
Dan says, 'I paid exactly twice as much as Mark but I only stayed 10 minutes longer.'  
In your exercise book, explain how Dan could be correct.

---

Here is a sketch of a triangle. It is not drawn to scale.  
Draw the full size triangle **accurately**.  
Use an angle measurer (**protractor**) and a ruler.
1

**KS2A 1999 Q.2**

The line on the grid is one side of a square.

On the grid, draw the other three sides of the square.

Use a ruler.

**Decide whether the statements are true or false, then list their letters below.**

a) All rectangles are quadrilaterals.  
   
   **True:** ..........................  
   
   **False:** ..........................

b) All quadrilaterals are rectangles.
   
   **True:** ..........................
   
   **False:** ..........................

c) Every quadrilateral is a rectangle but not every rectangle is a quadrilateral.
   
   **True:** ..........................
   
   **False:** ..........................

d) The diagonals of a rectangle are equal in length.
   
   **True:** ..........................
   
   **False:** ..........................

e) The adjacent sides of any rectangle are equal to each other.
   
   **True:** ..........................
   
   **False:** ..........................

f) The opposite sides of any rectangle are equal and parallel to each other.
   
   **True:** ..........................
   
   **False:** ..........................

g) Every trapezium has only 1 pair of parallel sides.
   
   **True:** ..........................
   
   **False:** ..........................

h) Every quadrilateral which has parallel sides is a trapezium.
   
   **True:** ..........................
   
   **False:** ..........................

i) All quadrilaterals with equal angles are rectangles.
   
   **True:** ..........................
   
   **False:** ..........................

j) There is a trapezium with equal sides which is not a rhombus.
   
   **True:** ..........................
   
   **False:** ..........................

4

**KS2B 1999 Q.6**

Here are five shapes on a square grid.

![Grid with shapes](image)

Write in the **missing** letters.

Shape □ has 2 pairs of parallel sides.  

[1 mark]

Shape □ is a pentagon.  

[1 mark]

Shape □ has reflective symmetry.  

[1 mark]
Use a ruler to draw the reflection of this shape in the mirror line.

You may use a mirror or tracing paper.

Draw mirror lines on the diagrams which have reflective symmetry.

Draw the reflection of each shape in its mirror line.

Follow the instructions.

a) Reflect shape ① in the x axis.
   Label it ②. Label the vertices A', etc.
   Write the coordinates of shapes ① and ② in your exercise book.

b) Reflect shape ② in the y axis.
   Label it ③. Label the vertices A", etc.
   Write its coordinates.

c) Reflect shape ② in line z.
   Label it ④. Label the vertices A"", etc.
   Write its coordinates.

d) Rotate shape ① by 90° around point O.
   Label it ⑤. Label the vertices A°, etc.
   Write its coordinates.
Fill in the missing coordinates.

A (1, 1)  A' (2, )
B (5, )  B' (10, )
C ( , 3)  C' ( , 6)
D ( , )  D' ( , )

What is the length of the model? Give your answer in centimetres, correct to one decimal place.

The height of the model is 2.9 centimetres. The height of the real car is 50 times the height of the model. What is the height of the real car? Give your answer in metres.

Show your method.
You may get a mark.

Solve the problem in your exercise book.

The lengths of the sides of a rectangle are whole centimetres. The perimeter of the rectangle is 20 cm.

a) How many different such rectangles are possible? Give the length of their sides.

b) Which of them has the smallest and greatest areas and what are these areas?
1

Decide whether the statements are true or false. Write T or F in the boxes.

a) All squares are rectangles.  

b) All squares are parallelograms.  

c) The diagonals of any parallelogram are not equal in length.  

d) Every parallelogram which has perpendicular diagonals is a square.  

e) Not every parallelogram with equal sides is a square.  

f) A parallelogram with equal sides and equal angles is a square.  

2

Follow these instructions.

a) Write the coordinates of A and B.

A ( , ), B ( , )  

b) Reflect shape 1 in the y axis. Label it 2.

Label A' and B'.

Write their coordinates.

A' ( , ), B' ( , )  

c) Reflect shape 2 in the x axis. Label it 3.

Label A" and B". Write their coordinates.

A" ( , ), B" ( , )  

d) Which single transformation will take shape 1 to shape 3?  

3

A travelling salesman is planning his weekly trip to all the towns on this map.

On the map, the letters are the towns, the lines are the roads and the numbers are the distances in km between towns.

The salesman must start and finish at A and must visit every town at least once.

a) Find a route for him and calculate its total distance.

Route:  

Total distance:  

b) Find the route which has the shortest possible distance.

Route:  

Total distance:  

Page 165
1. Draw one line from each shape to the rectangle which has the same area.

KS2A 1999 Q.5

[2 marks]

2. On the grid, draw a triangle which has the same area as the shaded rectangle.

KS2A 1999 Q.19

[1 mark]

3. Lindy has 4 triangles, all the same size. She uses them to make a star.

KS2B 1999 Q.20

Not to scale

Calculate the perimeter of the star.
Show your method. You may get a mark.

[2 marks]

4. The numbers represented by the square must be even and greater than 6. List all the numbers which make the inequality true.

HMC 2002. II Age 10

24 < (□ ÷ 2 - 3) × 2 < 50
This cuboid is made from centimetre cubes. It is 4 cm by 3 cm by 2 centimetres.
What is the **volume** of the cuboid?

\[ \square \text{ cm}^3 \quad [1 \text{ mark}] \]

Another cuboid is made from centimetre cubes. It has a volume of **30 cubic centimetres**.
What could the **length**, **height** and **width** be?

length: \[ \square \] cm  height: \[ \square \] cm  width: \[ \square \] cm  [1 mark]

---

**2**

a) Draw the net of a cuboid with sides 4 cm, 3 cm, and 2 cm.

b) Calculate its surface area.

---

**3**

Use each of the digits 0, 1, 2, 3, 4, 5, 6, 7, 8 and 9 **only once** to make **five** whole numbers, so that one number is twice, another number is three times, another number is four times and the last number is five times the smallest number.
### 1. Mass and Cost in Pence

This table shows the cost of sending a letter.

<table>
<thead>
<tr>
<th>Mass</th>
<th>Cost in pence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 60 g</td>
<td>26</td>
</tr>
<tr>
<td>61 g to 100 g</td>
<td>39</td>
</tr>
<tr>
<td>101 g to 150 g</td>
<td>49</td>
</tr>
<tr>
<td>151 g to 200 g</td>
<td>60</td>
</tr>
<tr>
<td>201 g to 250 g</td>
<td>70</td>
</tr>
</tbody>
</table>

Paul is sending a letter. It costs **38 p second class**.

How much would it cost him to send it **first class**?

Jenny has a letter with a mass of **170 g**. What does it cost to send it **first class**?

### 2. Bar Chart and Money Collection

Five children collect money to plant trees. Here is a bar chart of the amounts they have raised so far. Their target is **£40 altogether**.

How much more money do they need to reach the target?

*Show your working in your exercise book.*

### 3. Boat Trip Cost and Time

Tom, Amy and Helen want to go on a boat trip. There are three boats.

- **Lark**: 50 minute trip, Tickets £2.75 each
- **Heron**: 70 minute trip, Tickets £3.50 each
- **Kestrel**: 90 minute trip, Tickets £4.20 each

How much does it cost altogether for three people to go on the **Lark**?

Tom and Amy go on the **Heron**. They leave at **2.15 pm**. At what time do they return?

Helen goes on the **Kestrel** and gets back at **4.15 pm**. At what time did the boat leave?

### 4. Spinner and Probability

The inner ring on this spinner is divided into 12 equal sections.

- **a)** On which number is the pointer most likely to stop? Explain your answer in your exercise book.
- **b)** What is the probability of getting an even number?
Rob has some number cards. He holds up a card. He says, 

'If I multiply the number on this card by 5, the answer is 35.'

What is the number on the card? [1 mark]

He holds up a different card. He says,

'If I divide the number on this card by 6, the answer is 4.'

What is the number on the card? [1 mark]

August 1998

Simon's birthday is on August 20th.
In 1998 he had a party on the Sunday after his birthday.

What was the date of his party? [1 mark]

Tina's birthday is on September 9th.
On what day of the week was her birthday in 1998? [1 mark]

The same number is missing from each box. Write the missing numbers in the boxes.

\[ \square \times \square \times \square = 1331 \] [1 mark]

Parveen buys 3 small bags of peanuts. She gives the shopkeeper £2 and gets 80 p change. What is the cost in pence of one bag of peanuts?
Show your working in your exercise book.

In the year 2002, a man's age in years was equal to the sum of the digits of the year in which he was born. How old was he in 2002?
1. On the grid, draw 3 different rectangles which have the same area as the shaded triangle. Calculate the **perimeter** of each rectangle.

What are the lengths of the sides of the rectangle which has the shortest possible perimeter? \[ a = \quad b = \quad \]

2. The numbers represented by the square must be a multiple of 3 and greater than 12. List all the natural numbers which make the inequality true.

\[ 11 < (\underline{\quad} \div 3 - 4) \times 3 < 31 \]

3. How many triangles can you see in each of these diagrams?

   a) \hspace{2cm} b) \hspace{2cm} c) 

   \begin{align*}
   \text{triangles} & \quad \text{triangles} & \quad \text{triangles} \\
   \end{align*}

   How many triangles do you think will be in the next triangle in the sequence? \begin{align*}
   \text{triangles} \\
   \end{align*}

4. Which of the numbers 1 to 9 should be written in each square so that the **sum** of the four 2-digit numbers formed (two across and two down) is 67? (You may repeat a digit.)

5. Continue the sequence in both directions. Write the rule.

   a) \hspace{2cm} 1.25, 6.25, 31.25, \hspace{2cm} \hspace{2cm} Rule: \hspace{2cm} . . . .

   b) \hspace{2cm} 0.27, 0.81, 2.43, \hspace{2cm} \hspace{2cm} Rule: \hspace{2cm} . . . .
Milly and Ryan play a number game: *What's my number?*

**Milly**
- *Is it under 20?* Yes
- *Is it a multiple of 3?* Yes
- *Is it a multiple of 5?* Yes

What is the number? [1 mark]

Milly and Ryan play the game again.

**Ryan**
- *Is it under 20?* No
- *Is it under 25?* Yes
- *Is it odd?* Yes
- *Is it a prime number?* Yes

What is the number? [1 mark]

Here are two bags.

Each bag has 3 white balls and one black ball in it. A ball is taken from one of the bags without looking.

What is the probability that it is a black ball?

Give your answer as a fraction.

Put a cross (x) on this line to show the probability of taking a black ball from the new bag.

Write the positive whole numbers which are not greater than 20 in the Venn diagram.

List the whole numbers greater than 500 and less than 900 in which the digits are increasing. Try it out in your exercise book first.

When we add two numbers from four natural numbers, the sums are: 3, 3, 4, 5, 6 and 6. What are the four numbers?
### Extra questions

1. Factorise 172 and list its positive factors.

2. The digits of a 4-digit number greater than 5000 follow each other in increasing order. Another 4-digit number has those digits too, but in decreasing order. A third 4-digit number has those digits too. What are the three numbers if we know that their sum is 26352?

3. We want to place 12 spotlights in the ceiling so that they are in 6 straight lines and there are 4 spotlights in each line. Draw different arrangements.

4. The edges of a cube are to be coloured either red or blue so that each face has at least one red edge. What is the least number of edges which should be coloured red? Draw a diagram to show your answer.

5. Each diagram is the map of a field in which there are 4 wells. Show how the field could be divided into 4 congruent parts so that each part has exactly one well.

![Diagram](image.png)
1. Fill in the missing numbers so that the product of any two adjacent numbers is the number directly above them.

```
|   60   |
| 10    |
|   2   |
|   3   |
```

2. Sannir spins a fair coin and records the results.
In the first four spins, 'heads' comes up each time.
Sannir says, 'A head is more likely than a tail.'
Is he correct? Circle Yes or No. [1 mark]
YES / NO [1 mark]
Give a reason for your answer.

3. Calculator allowed
A shop sells sheets of sticky labels.
On each sheet there are 36 rows and 18 columns of labels.
How many labels are there altogether in 45 sheets?
Show your method. You may get a mark.

4. Harry has six tins of soup.
The labels have fallen off.
Here are the labels and tins.

Harry chooses a tin.
What is the probability that it is a tin of Pea Soup?
Give your answer as a fraction.

What is the probability that the tin he chooses is not a tin of Tomato Soup? Give your answer as a fraction.
1. Factorise 174 and list its positive factors.

2. **Freddy Fox** decided that from that day forward he would always tell the truth on Mondays, Wednesdays and Fridays but he would always tell lies on the other days of the week.

   One day he said, 'Tomorrow I will tell the truth.'

   On which day of the week do you think he said this?

3. Two barrels of equal size contain oil. One of the barrels is full and the other is half full. Their masses are 86 kg and 53 kg.

   What is the mass of an empty barrel?

4. Andy, Betty, Cindy and Danny are walking down a mountain and need to go through a narrow, dark tunnel but have to overcome these difficulties.

   - They have a torch which has only 12 minutes of power left.
   - Andy is able to walk through the tunnel in 1 minute, Betty in 2 minutes, Cindy in 4 minutes and Doris in 5 minutes.
   - They are all scared of the dark, so each of them will need the torch.
   - The tunnel is so narrow that only 2 of them can walk through it at the same time.

   Is it possible for them all to get through the tunnel? If so, how could they do it? If not, why not?

5. Write the natural numbers from 1 to 9 into a 3 by 3 grid so that:

   - the sum of the 3-digit numbers formed in the top and middle rows is equal to the 3-digit number in the bottom row;
   - the sum of the 3-digit numbers formed in the left and middle columns is equal to the 3-digit number formed in the right column.

   **Trials:**

<p>| | | |</p>

</tbody>
</table>
Use each of the natural numbers from 1 to 16 only once to form 8 pairs of numbers so that the sum of each pair is a square number.

For example, (2, 14) is a possible pair, as \(2 + 14 = 16 = 4 \times 4\)

\[
(\ , \ ), (\ , \ ), (\ , \ ), (\ , \ ), (\ , \ ), (\ , \ ), (\ , \ ), (\ , \ )
\]

A group of boys and girls were all brothers and sisters from the same family.
Each boy had as many sisters as he had brothers. Each girl had half as many sisters as she had brothers.

How many girls and boys were in the group?

\[
\text{Girls } \text{Boys }
\]

A school had a class reunion. Five old friends, Amy, Bill, Carrie, Dan and Eddie met up again for the first time since they had left school and found out that:

- they lived in different countries: Finland, Greece, Holland, Ireland and Japan;
- they had different jobs: engineer, lawyer, teacher, doctor and model;
- one had 4 children, one had 3 children, one had 2 children, one had 1 child and one had no children.

During the conversation, they also found out that:

- The lawyer was living in Japan.
- Bill was living in Greece and had 2 children.
- Amy had no children.
- The doctor lived in Finland and had some children.
- Dan was an engineer living in Holland.
- Eddie did not have 4 children.
- Carrie was a model and had one child.

Use the information to answer these questions.

a) How many children had the person living in Holland?

b) Where was Eddie living?

c) What was the name of the lawyer?

d) How many children did the doctor have?

e) What was Bill's job?

A lock on a safe needs a 6-letter code to open it. The code uses each of the letters A to F only once.

Jim tried to guess the code. Here are his guesses.

If we know that each of the 6 letters is in the correct place once in Jim's guesses and that the code starts with A, what is the code?

**Jim's guesses**

- CBADFE (1 letter is correct)
- AEDCBF (2 letters are correct)
- EDFACB (3 letters are correct)

Code:
