Problem 3

Let's use the same idea to solve this problem

If 2 children can paint 18 eggs in 2 hours, how many eggs can 4 children paint in 4 hours?

C, what do you think we should do? Who agrees? Who thinks something else? Allow Ps to explain their thinking first, then if no P has suggested it, T directs them through this method of solution.

BB:

$$\begin{array}{l} \times 2 \left(\begin{array}{l} 2 \text{ children} \quad 2 \text{ hours} \rightarrow 18 \text{ eggs} \\ 4 \text{ children} \quad 2 \text{ hours} \rightarrow 18 \times 2 = 36 \text{ (eggs)} \\ 4 \text{ children} \quad 4 \text{ hours} \rightarrow 36 \times 2 = 72 \text{ (eggs)} \end{array} \right) \times 2 \left(\right) \times 4 \end{array}$$

Answer: 4 children can paint 72 eggs in 4 hours.

19 min

Notes

Whole class activity

T repeats slowly while Ps think. Ps note data in *Ex. Bks* or on 'slates'.

Involve several Ps
Reasoning, agreement
Praise all contributions.

T explains, encouraging Ps to help when they understand.

Praising only

5

Graph

Frank was doing an experiment. He put a snail on a board at a starting line, then measured how far it had gone after every minute.

He made this graph to show his data but now he wants to show it in a table too.

Let's help him!

First discuss or elicit the components of the graph. (Ps come out to point and explain.)

- The *x*-axis (the horizontal line with arrow) represents the time (measured in minutes) from 0 minutes to 11 minutes.
- The *y*-axis (vertical line with arrow) represents the distance (measured in mm) from 0 mm to 700 mm.
- The thick vertical lines with the bars on top show how far the snail has moved after every minute.

Ps come to BB to point to 1 minute (2 minutes, etc) on the *x*-axis and move their finger vertically to the top of the line. Then they move their finger to the left along the horizontal grid lines until they reach the *y*-axis. Ps read out the distance (with T's help if necessary) and write it in the relevant column in the table. Class points out errors.

BB:

Time (minutes)	0	1	2	3	4	5	6	7	8	9	10
Distance (mm)	0	60	120	180	240	300	360	420	480	540	600

Who can write the rule? Who agrees? Who can write it another way? etc.

Do you think that the snail moved at the same speed throughout the 10 minutes? (Yes, because it travelled the same distance every minute, i.e. 60 mm every minute, or 1 mm every second.)

We can say that the time taken and the distance travelled are in direct proportion to one another, so we can join up the points with a straight line like this to show the snail's path.

Extension

How far would the snail have gone after 11 minutes? (660 mm)

25 min

Whole class activity

Graph and table drawn on BB or use enlarged copy master or OHP

(Ps could have copies on desks too.)

Discussion, revision, agreement, praising

Involve several Ps.

T (or Ps) points to relevant parts of graph.

At a good pace

Agreement, praising

Agree that the snail moves 60 mm each minute, so each column is 60 mm more than the previous one.

BB: Rule: $D = T \times 60$ (mm)
 $T = D \div 60$ (min)
 $D \div T = 60$

Y3

Lesson Plan 141

Activity

6

PbY3b, page 141

Q.1 Read: *Alan went on a cycling tour. He kept a note of how far he had cycled every 10 minutes. He made this graph to show his data. Use the graph to help you complete the table.*

How do you think Alan knew how far he had cycled? (Ps might know about a milometer for bicycles but if not T explains or shows one or demonstrates with a real bicycle.)

Elicit or point out similarities to (differences from) previous graph.

Review at BB with whole class. Ps dictate results to T.

If disagreement, Ps come to BB to check.

Solution:

Time (minutes)	0	10	20	30	40	50	60	70	80
Distance (km)	0	5	10	15	20	25	30	35	40

What is the rule? Who can write it another way? etc.

Rule: $D = T \div 2$, $T = D \times 2$, $T \div D = 2$

Do you think that Alan is travelling at the same speed all the time? (Yes, because he cycles the same distance every 10 minutes.)

We can say that the time taken and the distance travelled are in direct proportion to one another, so we can join up the points with a straight line like this. (T joins up points on graph.)

We could also show the graph in other ways, e.g.

a) with only the graph line

b) with only the data points.

Do you think that in real life Alan would be able to cycle at the same speed for 80 minutes? (Elicit that 80 min = 1 h 20 min) (e.g. No, there would be hills to cycle up and down, there could be other traffic on the road, he could get tired; or Yes, if he was cycling round and round a track and was so fit that he did not get tired – but then he would have to stop for a few seconds every 10 minutes to note down the data!)

33 min

Notes

Individual work, monitored, helped

Graph and table drawn on BB or use enlarged copy master or OHP

Initial discussion with the whole class to clarify context.

Axes show the same measures (distance and time) but here the distance is measured in km and the time interval is 10 min.

Reasoning, agreement, self-correcting, praising

Whole class discussion on the rule. Agreement, praising

Discussion, agreement

e.g. if the time taken is multiplied by 3, then the distance covered is also multiplied by 3, and vice versa.

Draw on blank graph or use enlarged copy master or OHP.

Stress that all 3 graphs show the same data.

Whole class discussion

Ask several Ps what they think.

Praise all contributions.

Extension

Lesson Plan 141

Activity

7

PbY3b, page 141, Q.2

Read: *This graph shows the approximate height above sea level of famous places. Use the graph to help you fill in the missing numbers.*

T explains the graph. Elicit that there is a horizontal grid line at every 100 m, that the positive numbers show height above sea level and the negative numbers show the depth below sea level.

Deal with one place at a time. Where is this place? What is it? Who has been there? Who has never heard of it? T could show location on an appropriate map and talk about it briefly.

Ps come to BB to point to relevant rectangle, read its height to the nearest 100 m and write it in the appropriate box. Class agrees/disagrees.

Solution:

- | | |
|--|--|
| 1. Ben Nevis \approx <u>1300</u> m
(= 1343 m) | 4. Hay Tor, Dartmoor \approx 500 m
(= 454 m) |
| 2. Mount Snowdon \approx 1100 m
(= 1085 m) | 5. Death Valley, USA \approx - 100 m
(= - 86 m) |
| 3. The Dead Sea \approx - 400 m
(- 397 m) | 6. Straits of Gibraltar \approx - 1200 m
(- 1181 m: deepest place on sea bed) |

Let's list the heights in decreasing order. (Ps dictate to T.)

BB: 1300 m, 1100 m, 500 m, - 100 m, - 400 m, - 1200 m

Are these heights in proportion? Is there a rule? (e.g. No, they are decreasing by different amounts each time, so they are not in proportion and there is no rule, so the rectangles cannot be joined up.)

40 min

Notes

Whole class activity

Graph drawn on BB or use enlarged copy master or OHP

Discussion, explanation but T asking for Ps' help where appropriate.

T could also have pictures to show to class.

With T's help if necessary

Agreement, praising

Ps write approximate heights in *Pbs* too if they wish.

Exact heights are given in brackets in case Ps ask about them.

Whole class in unison

Discussion, agreement, praising

8

Making a graph

This table shows the price of different quantities of cherries.

BB:

	100	300	800	600	500	1000
Quantity (g)	100	300	800	600	500	1000
Price (pence)	30	90	240	180	150	300

Let's show the data in this graph. Ps come to BB to choose a column in the table, put RH finger on matching quantity on *x*-axis and LH finger on appropriate price on *y*-axis, then P moves fingers along grid lines until they meet. P draws a dot at that point. Class agrees/disagrees.

BB:

Do you think that the quantity and price are in direct proportion to one another? (Yes, because if the quantity increases by 3 times, etc. then the price also increases by 3 times, etc. so we can join up the dots.)

Extension

What is the price of 200 g (700 g) of cherries?

What quantity of cherries would you get for £1.20 (£2.70)?

45 min

Whole class activity

Table and graph drawn on BB or use enlarged copy master or OHP

Ps could have copies on desks too.

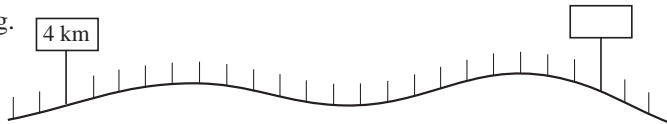

Initial discussion on table and relationship of rows to *x*-axis and *y*-axis on graph. Elicit that there is a horizontal grid line at every 10 p.

At a good pace

Demonstration, agreement, praising

Discussion, reasoning, agreement

Reading from graph or by calculation. Praising only.

<h1>Y3</h1>	<p>R: Calculation C: Perimeter and area of a rectangle E: <i>Volume of cuboids. Distance on a map (km)</i></p>	<h2 style="text-align: center;">Lesson Plan 142</h2>																								
<p>Activity</p> <p>1</p>	<p>Complete the table</p> <p>A spider can run 165 cm in 1 minute. Let's complete the table to show how far the spider can run in several minutes.</p> <p>BB:</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td>Time (minutes)</td> <td>1</td> <td>2</td> <td>3</td> <td>4</td> <td>5</td> <td>6</td> <td>7</td> <td>8</td> <td>9</td> <td>10</td> <td>0</td> </tr> <tr> <td>Distance (cm)</td> <td>165</td> <td>330</td> <td>495</td> <td>660</td> <td>825</td> <td>990</td> <td>1155</td> <td>1320</td> <td>1485</td> <td>1650</td> <td>0</td> </tr> </table> <p>Ps come to BB to choose a column and fill in the missing value, explaining reasoning. Class agrees/disagrees.</p> <p>Ps might notice connections between the columns to make the calculations easier, e.g.</p> $165 \times 4 = 165 \times 2 \times 2; \quad 165 \times 3 = 165 \times 2 + 165;$ $165 \times 9 = 165 \times 10 - 165 = 1650 - 165 = 1485$ <p style="text-align: right;">5 min</p>	Time (minutes)	1	2	3	4	5	6	7	8	9	10	0	Distance (cm)	165	330	495	660	825	990	1155	1320	1485	1650	0	<p>Notes</p> <p>Whole class activity Drawn on BB or use enlarged copy master or OHP At a good pace Ps may do calculations in <i>Ex. (4 km to <u>5 km</u>) T elicits or reminds Ps that 'kilo' means 'thousand' (from Ancient Greek), so 'kilometre' means 'thousand metres'.</p> <p>What other unit of distance do you see on road signs in this country? (miles) Is a mile shorter or longer than a kilometre? (longer) T writes on BB.</p> <p style="text-align: right;">13 min</p>	<p>Whole class activity Drawn on BB or use enlarged copy master or OHP (19 markers but 20 spaces)</p> <p>Agreement, praising BB: $20 \times 50 \text{ m} = 2 \times 500 \text{ m} = \underline{1000 \text{ m}}$ 1000 metres = 1 <u>kilometre</u></p> <p>Discussion, agreement $5 \text{ km} \approx 3 \text{ miles}$ or $3 \text{ miles} \approx 1 \text{ and } 2 \text{ thirds km}$</p>																								

Y3

Lesson Plan 142

Activity

4

Distances on a map

Ps have a copy of map on desks. (If using copy master, Ps could suggest names for the towns.)

- a) T says two places at a time. BB: e.g.
Ps find them on the map and read out (or total) the distance along the roads between them.

- b) Now look at this map. What is different about it? (Same places but no roads) What does the scale mean? (1 mm on this map means 2 km in real life.) What would 10 mm (25 mm, 150 mm) on this map mean in real life? (20km, 50 km, 300 km)

Imagine you are a bird and can fly through the air in a straight line from one town to the next and do not have to stick to the roads. How far apart in real life are, e.g. A and D (C and E, etc.) 'as the crow flies'?

Ps find letters on the map, draw a straight line between them and measure from the centre of one town to the centre of the next one in mm. Then they calculate the actual distance by multiplying by 2 and changing mm to km. Ps write actual distances below lines.

Why are the distances not exactly the same as the map in a)? (Roads in first map are not straight, so the more winding the road, the further you have to travel.) Elicit that the shortest distance between two points is always a straight line.

Notes

Whole class activity

Use enlarged copy masters or OHP (or a simple local map, amending scale to miles if necessary)

Differentiated questions

Ps can say the places too!

Individual drawing and measuring but T keeps class together

Agreement, praising

T might choose only 2 or 3 pairs of towns, depending on ability of Ps.

Accept small variation in measurements.

e.g. Scale: 1 mm → 2 km

20 min

5

Quadrilaterals

T has various shapes stuck (or drawn) on BB, e.g. BB:

What questions can you think of to ask about these shapes? e.g.

- Which of these shapes are quadrilaterals? (2, 3, 4, 7, 8)
(Elicit that a quadrilateral has 4 straight sides.)
 - Which of these shapes are rectangles? (2, 3, 7, 8)
(Elicit that rectangles are quadrilaterals with opposite sides equal and parallel and with square corners or right angles.)
 - Which of these shapes are squares? (2, 7)
(Elicit that a square is a regular rectangle i.e. all sides of equal length)
- Who can come and point to a vertex (corner), side, right angle?
 - Who can show us pairs of perpendicular (parallel) lines? etc.

Whole class activity

Shapes cut from coloured paper and stuck to BB or use enlarged copy master or OHP

Give Ps the chance to think of questions about the shapes first.

Ps can shout the numbers of the shapes in unison, or come to BB to point and explain.

Elicit that they are all plane (flat) shapes, so have only 2 dimensions: height and width (Ps might mention that they all have just 1 face.)

Extra praise for 'clever' questions!

Feedback for T

24 min

Y3

Lesson Plan 142

Activity

6

Area and volume

- a) Study this rectangle. e.g.
 What is the length of its perimeter?
 Ps dictate what T should write.

BB: $P = 3 + 4 + 3 + 4 = 2 \times (3 + 4) = 2 \times 7 = \underline{14}$ (units)

What is its area? Ps dictate what T should write.

BB: $A = 3 + 3 + 3 + 3 = 4 + 4 + 4 = 3 \times 4 = \underline{12}$ unit squares

- b) Study this cuboid. e.g.
 What is the area of all its faces?
 (i.e. area of its surface)

What is its volume?

Ps dictate what T should write.

BB: $A = 4 \times 3 + 2 \times 3 + 4 \times 3 + 2 \times 3 + 4 \times 2 + 4 \times 2$
 $= (4 \times 3) \times 2 + (2 \times 3) \times 2 + (4 \times 2) \times 2$
 $= (4 \times 3 + 2 \times 3 + 4 \times 2) \times 2$
 $= (12 + 6 + 8) \times 2$
 $= 26 \times 2$
 $= \underline{52}$ (unit squares)

$V = (4 + 4 + 4) \times 2$
 $= 4 \times 3 \times 2 = 12 \times 2$
 $= \underline{24}$ (unit cubes)

29 min

Notes

Whole class activity

T has rectangle drawn on BB and large cuboid made from unit cubes for demonstration.

Revisen perimeter and area of a rectangle and surface area and volume of a cuboid.

Ps could have $4 \times 3 \times 2$ cuboids on desks too.

T leads Ps through calculation if Ps are unsure.

At each stage T demonstrates which face is being noted.

Stress importance of units:

BB: *Perimeter:* units

Area: unit squares

Volume: unit cubes

Agreement, praising

7

PbY3b, page 142

Q.1 What are the perimeter and area of each of these diagrams if:

- i) the perimeter is measured in these units and the area in these square units. . . . ?

Deal with one part at a time. Ps work out number of unit lengths and units squares by counting or calculating in *Ex. Bks.*

Make sure that in part ii) Ps know that the unit length is 2 segments long, i.e. twice as long as in i), and the unit square is comprised of 4 small squares, i.e. 4 times as big as in i).

Review at BB with whole class after every part. Ps come to BB or dictate results to T. Mistakes discussed and corrected.

Solution:

i) $P = (8 + 5) \times 2$
 $= \underline{26}$ — units
 $A = 8 \times 5 = \underline{40}$  units

$P = (7 + 4) \times 2$
 $= \underline{22}$ — units
 $A = 7 \times 4 = \underline{28}$  units

ii) $P = (4 + 2 \text{ and a half}) \times 2$
 $= \underline{13}$ — units
 $A = 4 \times 2 \text{ and a half}$
 $= \underline{10}$  units

$P = (3 \text{ and a half} + 2) \times 2$
 $= \underline{11}$ — units
 $A = 3 \text{ and a half} \times 2$
 $= \underline{7}$  units

35 min

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

T explains task with reference to diagrams on BB.

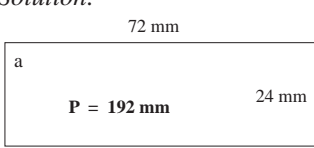

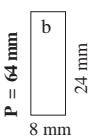

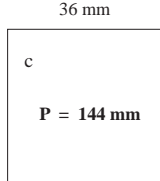

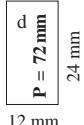

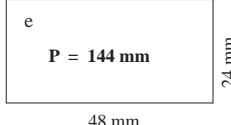

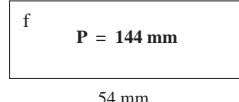

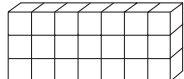

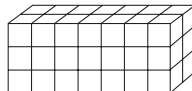

Ps can do calculations in *Ex. Bks* if necessary.

Discussion, reasoning, agreement, self-correction, praising

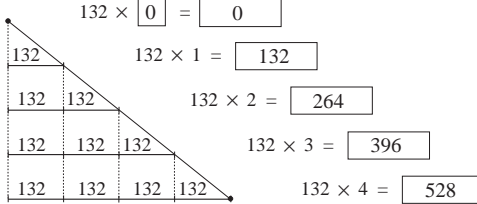

Feedback for T

Ps could colour each 

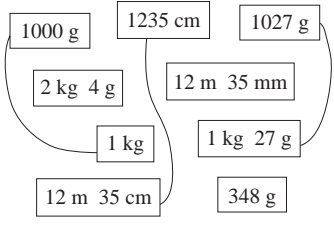

a different colour, then count them as a check.

<h1>Y3</h1>		<p><i>Lesson Plan 142</i></p>
<p>Activity</p> <p style="text-align: center;">8</p> <p>Extension</p>	<p><i>PbY3b, page 142</i></p> <p>Q.2 Read: <i>Measure the sides of each rectangle in mm and write the lengths beside them.</i></p> <p style="text-align: center;"><i>Calculate the perimeter of each rectangle in mm and write it inside the shape.</i></p> <p>T could ask several Ps for estimates of the sides and write the responses on the BB. Let's see who is nearest!</p> <p>Set a time limit. Ps measure and label sides and calculate the perimeters, doing calculations in <i>Ex. Bks.</i> if necessary.</p> <p>Review at BB with whole class. Mistakes corrected. Compare with estimates. Extra praise for closest estimate.</p> <p><i>Solution:</i></p> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  <p>a</p> </div> <div style="text-align: center;">  <p>b</p> </div> <div style="text-align: center;">  <p>c</p> </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-start; margin-top: 10px;"> <div style="text-align: center;">  <p>d</p> </div> <div style="text-align: center;">  <p>e</p> </div> <div style="text-align: center;">  <p>f</p> </div> </div> <p>Ps also give perimeters in cm and mm (or just cm, e.g. 19.2 cm)</p> <p>Ps calculate the area of one or two of the rectangles.</p> <p>e.g. b) $A = 8 \text{ mm} \times 24 \text{ mm} = (160 + 32) \text{ mm squares}$ $= \underline{192} \text{ mm squares (or mm}^2\text{)}$</p> <p style="text-align: right;"><i>40 min</i></p>	<p style="text-align: center;">Notes</p> <p>Individual work, monitored, helped</p> <p>Use enlarged copy master or OHP for discussion and demonstration only.</p> <p>Whole class estimation first. In good humour!</p> <p>Differentiation by time limit</p> <p>Ps measure rectangles in letter order.</p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>If problems, write calculation on BB: e.g.</p> <p>d) $P = (12 + 24) \times 2$ $= 36 \times 2$ $= 60 + 12 = 72 \text{ (mm)}$</p> <p>Whole class activity</p> <p>Ps choose the rectangles and come to BB or dictate to T.</p> <p>T reminds Ps of short way to write 'mm squares'.</p>
<p style="text-align: center;">9</p> <p>Extension</p>	<p><i>PbY3b, page 142</i></p> <p>Q.3 Read: <i>How many unit cubes does each of these cuboids contain? This is their volume.</i></p> <p>Ps could have models already made up on desks, or T has large models to show to class.</p> <p>Ps count unit cubes and write multiplications in their <i>Pbs.</i></p> <p>Review at BB with whole class. Ps come to BB, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  <p>a)</p> </div> <div style="text-align: center;"> <p>Volume = 7 unit cubes</p> </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-start; margin-top: 10px;"> <div style="text-align: center;">  <p>b)</p> </div> <div style="text-align: center;"> <p>Volume = $7 \times 3 = \underline{21}$ unit cubes</p> </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-start; margin-top: 10px;"> <div style="text-align: center;">  <p>c)</p> </div> <div style="text-align: center;"> <p>Volume = $7 \times 3 \times 2 = \underline{42}$ unit cubes</p> </div> </div> <p>What is the <u>surface area</u> of each cuboid? (Elicit or explain that surface area is the number of unit squares which cover it.)</p> <p>T writes what Ps dictate (or Ps come to write on BB). Refer to each face on the model as it is dealt with.</p> <p style="text-align: right;"><i>45min</i></p>	<p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>Feedback for T</p> <p><i>Solution to Extension:</i></p> <p>a) $A = 7 \times 4 + 1 \times 3 + 2$ $= 28 + 2$ $= \underline{30}$ unit squares</p> <p>b) $A = (7 \times 3 + 1 \times 3 + 7 \times 1) \times 2$ $= (21 + 3 + 7) \times 2$ $= \underline{62}$ unit squares</p> <p>c) $A = (7 \times 3 + 2 \times 3 + 7 \times 2) \times 2$ $= (21 + 6 + 14) \times 2$ $= \underline{82}$ unit squares</p>

<h1>Y3</h1>	<p>R: Calculation C: Quantities (mass, capacity, length) E: Exchange of units</p>	<h2>Lesson Plan 143</h2>
<p>Activity 1</p>	<p>Missing values</p> <p>Let's see how much you remember. Who can fill in these values? Ps come out to BB to fill in numbers, saying the whole equation. Class points out errors.</p> <p>BB: a) $1425\text{ m} = \boxed{1}\text{ km } \boxed{425}\text{ m}$ b) $1840\text{ g} = \boxed{1}\text{ kg } \boxed{840}\text{ g}$ $1007\text{ m} = \boxed{1}\text{ km } \boxed{7}\text{ m}$ $1016\text{ g} = \boxed{1}\text{ kg } \boxed{16}\text{ g}$</p> <p>c) $1618\text{ mm} = \boxed{1}\text{ m } \boxed{618}\text{ mm}$ d) $1276\text{ ml} = \boxed{1}\text{ litre } \boxed{276}\text{ ml}$ $1010\text{ mm} = \boxed{1}\text{ m } \boxed{10}\text{ mm}$ $1042\text{ ml} = \boxed{1}\text{ litre } \boxed{42}\text{ ml}$</p> <p>e) $1328\text{ mm} = \boxed{1}\text{ m } \boxed{328}\text{ mm} = \boxed{1}\text{ m } \boxed{32}\text{ cm } \boxed{8}\text{ mm}$ $157\text{ cm} = \boxed{1}\text{ m } \boxed{57}\text{ cm} = \boxed{1}\text{ m } \boxed{570}\text{ mm}$ $1\text{ km } 65\text{ m} = \boxed{1065}\text{ m}$</p> <p style="text-align: right;">6 min</p>	<p>Notes</p> <p>Whole class activity Written on BB or SB or use enlarged copy master or OHP At a good pace Reasoning, agreement, praising Revise relationships: BB: $1\text{ litre} = 100\text{ cl} = 1000\text{ ml}$ $1\text{ cl} = 10\text{ ml}$ $1\text{ km} = 1000\text{ m}$ $1\text{ m} = 100\text{ cm} = 1000\text{ mm}$ $1\text{ cm} = 10\text{ mm}$ $1\text{ kg} = 1000\text{ g}$</p>
<p>2</p>	<p>Scale</p> <p>Ps have 'maps' on desks. BB: T has large copy for demonstration only.</p> <p>How long are the paths?</p> <p>Ps measure each path and write its length beside it (in cm).</p> <p>Ps dictate measurements for T to write on enlarged map on BB.</p> <p>If 1 cm on the map means 100 m in real life, what are the real distances?</p> <p>Ps come to BB to write real distances in metres (or class shouts out in unison as T points to each).</p> <div data-bbox="667 996 1066 1209" data-label="Diagram"> </div> <p style="text-align: right;">10 min</p>	<p>Whole class activity, but individual work in measuring.</p> <p>Use copy master (or any similar simple 'map' prepared by T)</p> <p>Encourage accurate measuring</p> <p>Agreement, praising</p> <p>BB: <u>Scale: 1 cm → 100 m</u> $2.5\text{ cm} \rightarrow 250\text{ m}$ $3\text{ cm} \rightarrow 300\text{ m}$ $4\text{ cm} \rightarrow 400\text{ m}$</p>
<p>3</p>	<p>PbY3b, page 143</p> <p>Q.1 Read: <i>A, B, C and D are places on a map. 1 mm on the map means 20 m in real life.</i></p> <p>What would 10 mm on the map be in real life? (200 m) What would 60 m in real life be on the map? (3 mm)</p> <p>a) Read: <i>Measure each line on the map in mm and write its length beside it.</i></p> <p>Review at BB with whole class. Mistakes corrected. As each is dealt with, Ps also calculate real distance and write on their maps. T writes on BB map what Ps dictate.</p> <p>b) Read: <i>In how many ways can you get from A to D? What distance is each route?</i></p> <p>Do first route on BB, with Ps' help, as a model for Ps to follow. Rest done as individual work, with necessary calculations done in Ex. Bks.</p> <p>Review with whole class. Ps come to BB to show and write their routes. Class agrees/disagrees. Mistakes corrected.</p> <p>Which is the shortest (longest) route? (ABD, ABCD)</p> <p style="text-align: right;">18 min</p>	<p>Whole class activity to start Drawn on BB or use enlarged copy master or OHP for demonstration only!</p> <p>Individual work, monitored, (helped)</p> <p>Agreement, self-correction, praising</p> <div data-bbox="1141 1702 1468 1848" data-label="Diagram"> </div> <p>BB: (680 m) (600 m) 34 mm 30 mm (320 mm) 16 mm 28 mm 38 mm (760 m)</p> <p>Reasoning, agreement, self-correction, praising</p> <p>Solution:</p> <p>ABD: 64 mm 1280 m ABCD: 78 mm 1560 m ACBD: 84 mm 1680 m ACD: 66 mm 1320 m</p>

<p>Y3</p>		<p><i>Lesson Plan 143</i></p>
<p>Activity</p> <p>4</p>	<p>PbY3b, page 143</p> <p>Q. 2 Read: <i>Study the diagram. Fill in the missing numbers.</i></p> <p>T explains the diagram. (e.g. Think of a giant stepping along the number line 132 units at a time. The top dot shows where he starts (i.e. he has not moved yet!) The line segment below the dot shows 1 step, the line below that shows 2 steps, etc. and the dot at the bottom RHS shows where he finished.)</p> <p>Fill in the missing numbers so that the equations show how far the Giant has gone after different numbers of steps.</p> <p>Review at BB with whole class. Mistakes discussed/corrected.</p> <p><i>Solution:</i></p>  <p>Ps point out relationships, (e.g. $132 \times 4 = 132 \times 2 \times 2$) and that each line is 132 more than the line above.</p> <p style="text-align: right;"><i>22 min</i></p>	<p>Notes</p> <p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Whole class discussion about meaning of diagram first.</p> <p>Reasoning, agreement, self-correction, praising</p> <p>Discussion, praising</p>
<p>5</p>	<p>Mass</p> <p>T has various small packets at front of class (e.g. spices, herbs, cornflour, baking powder, etc.). Ps come out to choose one and read out its mass in grams. Agree that 1 gram is very light in weight!</p> <p>T shows a hollow 1 cm glass cube and fills it with water (or shows the 'l' rod from Cuisenaire). This amount of water is <u>1 millilitre</u> and its mass is 1 gram*.</p> <p>BB: 1 cm cube of water (1 cc) → 1 ml → 1 gram</p> <p>How many grams are in 1 kilogram? (1000) Remind Ps that 'kilo' and 'milli' are Ancient Greek words. Elicit their meaning. (BB)</p> <p>BB: 1 <u>kilogram</u> = <u>1000</u> grams 1000 g = 1 kg</p> <p>This cube (T shows) has edge of length 10 cm. How many 1 cm cubes do you think it can hold?</p> <p>($10 \times 10 \times 10 = 100 \times 10 = 1000$ cm cubes)</p> <p>If a 1 cm cube holds 1 millilitre of water, how much water do you think 1000 cm cubes can hold? (1000 ml or 1 litre)</p> <p>T shows litre jug. If I filled this jug with water, what would the mass of the water be? (1000 g) What other unit of capacity do you know? (centilitre: 'centi' means hundredth) Elicit relationship to litre and ml.</p> <p>[*Note for T: using pure water at 4°C]</p> <p style="text-align: right;"><i>27 min</i></p>	<p>Whole class activity</p> <p>Pass items round class so that Ps can get an idea of what 50 g, 100 g, etc. feels like.</p> <p>[Revision/comparison of units of length, capacity and mass]</p> <p>BB: <u>kilo</u>: thousand <u>milli</u>: thousandth</p> <p>T could have strips of 10 and layers of 100 cubes already prepared as confirmation.</p> <p>BB: 1 cc → 1 ml → 1 g 1000 cc → 1000 ml → 1000 g 1 litre → 1 kg</p> <p>1 litre = 100 cl 1 cl = 10 ml</p>
<p>6</p>	<p>Capacity</p> <p>Work out the capacity of these containers in your <i>Ex. Bks.</i> Remember to write the unit too! Review with whole class. Ps explain reasoning.</p> <p>a) It can be filled with four 50 litre cans. (200 litres)</p> <p>b) It can be filled with twenty 16 litre cans. (320 litres)</p> <p>c) It can be filled with five 25 litre cans and five 15 litre cans. (200 litres)</p> <p>d) It can be filled with twelve 9 litre and fifteen 4 litre jugs. (168 litres)</p> <p style="text-align: right;"><i>31 min</i></p>	<p>Individual work, monitored, helped</p> <p>Ps could show answers on scrap paper or 'slates' on command.</p> <p>Reasoning (in detail) , agreement, self-correcting, praising</p>

Y3		<i>Lesson Plan 143</i>
Activity 7	<p>PbY3b, page 143</p> <p>Q.3 Read: <i>Do the calculations in your Ex. Bks. Fill in the missing numbers.</i></p> <p>Set a time limit. Review at BB with whole class. Ps come to BB to explain reasoning and show calculations in detail. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) $24 \times 70 \text{ ml} = \underline{1680} \text{ ml} = \underline{168} \text{ cl} = \underline{1} \text{ litre } \underline{68} \text{ cl}$</p> <p>b) $125 \times 6 \text{ cl} = 750 \text{ cl} = \underline{7} \text{ litres } \underline{50} \text{ cl} = \underline{7} \text{ litres } \underline{500} \text{ ml}$</p> <p>c) $174 \times 9 \text{ cl} + 135 \times 3 \text{ cl} = \underline{19} \text{ litres } \underline{71} \text{ cl} = \underline{19} \text{ litres } \underline{710} \text{ ml}$</p> <p style="text-align: right;">36 min</p>	<p style="text-align: center;">Notes</p> <p>Individual work, monitored, helped (or whole class activity)</p> <p>Written on BB</p> <p>Differentiation by time limit. Reasoning, agreement, self-correction, praising</p> <p>Show calculations in detail, e.g.</p> <p>a) $\begin{array}{r} 240 \times 7 \\ \underline{1680} \\ 2 \end{array}$ b) $\begin{array}{r} 125 \times 6 \\ \underline{750} \end{array}$</p> <p>c) $\begin{array}{r} 174 \times 9 \\ \underline{1566} \end{array}$ $\begin{array}{r} 135 \times 3 \\ \underline{405} \end{array}$ $\begin{array}{r} 1566 \\ + 405 \\ \underline{1971} \end{array}$</p>
8	<p>PbY3b, page 143</p> <p>Q.4 Read: <i>What is the mass of:</i></p> <p>a) <i>8 tablespoons of flour if 1 tablespoon of flour weighs 15 g?</i></p> <p>b) <i>7 tablespoons of sugar if 1 tablespoon of sugar weighs 23 g?</i></p> <p>c) <i>4 tablespoons of salt if 1 tablespoon of salt weighs 28 g?</i></p> <p>d) <i>2 tablespoons of flour, 3 tablespoons of sugar and 4 tablespoons of salt?</i></p> <p>Set a time limit. Calculations done in <i>Ex. Bks</i> or on scrap paper. Review at BB with whole class. Ps explain reasoning in detail. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) $8 \times 15 \text{ g} = 80 \text{ g} + 40 \text{ g} = \underline{120} \text{ g}$</p> <p>b) $7 \times 23 \text{ g} = 140 \text{ g} + 21 \text{ g} = \underline{161} \text{ g}$</p> <p>c) $4 \times 28 \text{ g} = 80 \text{ g} + 32 \text{ g} = \underline{112} \text{ g}$</p> <p>d) $2 \times 15 \text{ g} + 3 \times 23 \text{ g} + 4 \times 28 \text{ g} = 30 \text{ g} + 69 \text{ g} + 112 \text{ g} = \underline{211} \text{ g}$</p> <p style="text-align: right;">41 min</p>	<p>Individual work, monitored, helped (or whole class activity, with responses shown in unison on command)</p> <p>T could have tablespoons to show to class.</p> <p>Differentiation by time limit. Reasoning, agreement, self-correction, praising</p>
9	<p>Revision practice</p> <p>What is the mass of, e.g.:</p> <p>a) 1 ml (3 ml, 51 ml, etc.) of water? (1 g, 3 g, 51 g, etc.)</p> <p>b) 1 cl (6 cl, 10 cl, etc.) of water? (10 g, 60 g, 100 g, etc.)</p> <p>c) 1 litre (1 and a half litres, half a litre, 5 litres, etc.) of water? (1000 g or 1 kg, 1500 g or 1 and a half kg, 500 g or half a kg, 5000 g or 5 kg, etc.)</p> <p style="text-align: right;">45 min</p>	<p>Whole class activity</p> <p>T chooses Ps at random.</p> <p>At a good pace</p> <p>If Ps answer incorrectly, the next P corrects it.</p> <p>In good humour!</p> <p>Praising, encouragement only</p>

<h1>Y3</h1>	<p>R: Mental and written operations C: Calculations with quantities. Time. E: <i>Leap year</i></p>	<h2>Lesson Plan 144</h2>
<p>Activity</p> <p>1</p> <p>Equal values</p> <p>Let's join up the equal quantities. BB:</p> <p>Ps come to BB to draw joining lines, or rearrange cards, explaining reasoning. Class agrees/disagrees.</p> <p>Extension</p> <p>Who can think of values equal to those which are <u>not</u> joined up?</p> <p>(e.g. 12 m 35 mm = 12 m 3 cm 5 mm = 1203 cm 5 mm; 2 kg 4 g = 2004 g; 348 g = 0.348 kg)</p>	 <p style="text-align: center;">4 min</p>	<p>Notes</p> <p>Whole class activity</p> <p>Written on BB or use enlarged copy master or OHP, or flash cards stuck to BB.</p> <p>At a good pace</p> <p>Agreement, praising</p> <p>Feedback for T</p>
<p>2</p> <p>Missing numbers</p> <p>Let's write in the missing numbers. Nod your head if you agree with the answer and put your hands on your head if you disagree!</p> <p>A, come and fill in the first missing number. Is A correct? Show me . . . now! B, what do you think it should be? Why? etc.</p> <p>BB:</p> <p>a) 1 third of a year = <input type="text" value="4"/> months 1 quarter of a year = <input type="text" value="3"/> months</p> <p>1 year 3 months = <input type="text" value="15"/> months <input type="text" value="1 half"/> of a year = 6 months</p> <p>1 year = <input type="text" value="4"/> seasons <input type="text" value="2 thirds"/> of a year = 8 months</p> <p>b) 1 quarter of a day = <input type="text" value="6"/> hours 1 eighth of a day = <input type="text" value="3"/> hours</p> <p>3 days = <input type="text" value="72"/> hours 3 quarters of a day = <input type="text" value="18"/> hours</p> <p><input type="text" value="2"/> days = 48 hours <input type="text" value="7 eighths"/> of a day = 21 hours</p>	<p style="text-align: center;">10 min</p>	<p>Whole class activity (Or other pre-agreed actions)</p> <p>Written on BB or SB or use enlarged copy master or OHP</p> <p>Responses given in unison</p> <p>At a good pace</p> <p>Reasoning, agreement, praising</p> <p>Details given where necessary: 3 hours = 1 eighth of a day 21 hours = <u>7 eighths</u> of a day</p> <p>Feedback for T</p>
<p>3</p> <p>Open sentences</p> <p>Let's complete these sentences.</p> <p>Ps come to BB to fill in missing items, then read the sentence aloud. Class points out errors. Ps copy important statements into <i>Ex. Bks.</i></p> <p>BB:</p> <p>a) 1 year = 4 seasons 1 year = <u>12</u> months 1 year = <u>365</u> days, or 1 leap year = <u>366</u> days <u>Leap years</u> are the years divisible by 4. Only every 4th whole hundred is a <u>leap year</u>. The year 2000 was a <u>leap year</u>. The year 2000 was the <u>last</u> year of the 20th century. The first year of the 21st century is <u>2001</u>. The first day of the 21st century is <u>1st January 2001</u>. Years are counted from the birth date of <u>Jesus Christ</u>.</p> <p>b) 31 day months: <u>January, March, May, July, August, October, December</u></p> <p>30 day months: <u>April, June, September, November</u></p> <p>28 or 29 day months: <u>February</u></p> <p>c) 1 week = <u>7</u> days 1 day = <u>24</u> hours 1 hour = <u>60</u> minutes 1 minute = <u>60</u> seconds 1 year = <u>52</u> weeks + 1 or 2 days</p>	<p style="text-align: center;">18 min</p>	<p>Whole class activity</p> <p>Written on BB or SB or use enlarged copy masters or OHP</p> <p>At a good pace.</p> <p>Agreement, praising</p> <p>T might discuss other systems apart from the Christian one: (Hindu, Jewish, Muslim, etc.)</p> <p>Tell or elicit that: a century is 100 hundred years ('cent' means 'hundred'); the 20th century is the 2nd thousand years or the 200th decade (1 decade = 10 years)</p> <p>Ps list on BB, rest of class in <i>Ex. Bks.</i></p> <p>Encourage neat written work.</p> <p>T could show short notation for minute and second.</p> <p>BB: 1' = 1 minute 1" = 1 second</p>

Y3		<i>Lesson Plan 144</i>
Activity 4	<p>Find the mistake</p> <p>Which of these statements are correct? Let's find the mistakes and correct them. Ps come to BB to write a tick or a cross and correct mistakes, explaining reasoning. Class agrees/disagrees.</p> <p>BB:</p> <p>a) 37 minutes + 63 minutes = 1 hour. ✗ (e.g. 37 min + 23 min)</p> <p>b) 1 minute – 26 seconds = 34 seconds ✓</p> <p>d) 65 minutes + 12 minutes < 1 hour ✗ (e.g. > 1 hour)</p> <p>e) 86 seconds – 26 seconds > 1 minute ✗ (e.g. = 1 minute)</p> <p style="text-align: right;"><i>21 min</i></p>	<p style="text-align: center;">Notes</p> <p>Whole class activity</p> <p>Written on BB or SB or OHT</p> <p>At a good pace</p> <p>Reasoning, agreement, praising</p> <p>Ps write corrected statements in <i>Ex. Bks.</i></p> <p>Feedback for T</p>
5	<p>Telling the time?</p> <p>a) T sets a model (or real) clock to certain times (or draws hands on clock face on BB or OHT). Ps say the time in different ways. Who can write the time on the BB? Who can write it in another way? Talk about am and pm and the 24 hour clock.</p> <div style="display: flex; justify-content: space-around; align-items: flex-end;">  </div> <p style="text-align: center;">12:00 4:00 5:15 7:10 6:50 8:58 11:45 9:40 00:00 16:00 17:15 19:10 18:50 20:58 23:45 21:40</p> <p>b) T (or Ps) says a time. Ps show the time on their model clocks on command. How would a 24 hour clock show this time? etc.</p> <p style="text-align: right;"><i>26 min</i></p>	<p>Whole class activity</p> <p>T chooses Ps at random</p> <p>At a good pace</p> <p>Agreement, praising</p> <p>e.g. ten past seven, 7.10 a.m</p> <p>Mention midnight and midday as being neither am nor pm.</p> <p>Use copy master <i>Y2 LP 103/1</i></p> <p>e.g. 9.40 am would be 09:40</p> <p>Agreement, praising</p>
6	<p>PbY3b, page 144</p> <p>Q.1 Read: <i>Write each of these times in a different way. Follow the example.</i></p> <p>T explains task using completed part a).</p> <p>Review at BB with whole class. Mistakes discussed and corrected. Ps could show the times on their model clocks.</p> <p><i>Solution:</i></p> <p>a) 13:45 = <u>1.45 pm</u> b) 16:30 = <u>4.30 pm</u></p> <p>c) 20:12 = <u>8.12 pm</u> d) 22:58 = <u>10.58 pm</u></p> <p>e) 23:04 = <u>11.04 pm</u> e) 00:00 = <u>midnight</u></p> <p style="text-align: right;"><i>30 min</i></p>	<p>Individual work, monitored, helped</p> <p>T has digital and analogue clocks to demonstrate and explain.</p> <p>Reasoning, agreement, self-correcting, praising</p> <p>In what other ways could we say these times?</p> <p>(e.g. 'a quarter to one', 'half past four', etc.)</p>
7	<p>PbY3b, page 144, Q.2</p> <p>Read: <i>How many hours and minutes have passed from:</i></p> <p>a) 08:20 to 10:10 b) 07:45 to 09:15</p> <p>c) 10:42 to 14:10 d) 18:20 one day to 08:30 the next day?</p> <p>C, how would you work out part a)? Who would do the same? Who would do it a different way? Ps come to BB to explain and demonstrate on model clock. e.g.</p> <p>08:20 to 10:10 : 2 hours – 10 minutes = 1 hour 50 minutes</p> <p>or 1 hour + 40 min + 10 min = 1 hour 50 minutes.</p> <p><i>Solution:</i></p> <p>a) 08:20 to 10:10 = <u>1 h 50 min</u> b) 07:45 to 09:15 = <u>1 h 30 min</u></p> <p>c) 10:42 to 14:10 = <u>3 h 28 min</u> d) 18:20 to 32:30 = <u>14 h 10 min</u></p> <p style="text-align: right;"><i>35 min</i></p>	<p>Whole class activity</p> <p>(or individual work if Ps wish, in which case Ps could have model clocks on desks to help them).</p> <p>Reasoning, agreement, praising</p> <p>Details of reasoning given.</p> <p>e.g. d)</p> <p>18:20 to 19:00 = 40 min</p> <p>19:00 to 24:00 = 5 h</p> <p>00:00 to 08:30 = 8 h 30 min</p> <hr/> <p>18:20 to 08:30 = 13 h 70 min</p> <p style="text-align: right;">= <u>14 h 10 min</u></p>

Y3**Lesson Plan**
145**Activity****Notes**

Tables practice, revision, activities, consolidation

PbY3b, page 145**Solutions:**

Q.1 a)

Time (seconds)	0	10	20	30	40	50	60	70	80	90	100	110
Water level (mm)	0	30	60	90	120	150	180	210	240	270	300	330

c) $L = T \times 3$ (mm) $T = L \div 3$ (sec) $L \div T = 3$

Q.2

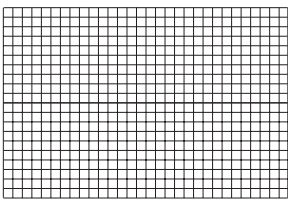

Quantity (kg)	1	6	4	9	5	7	1 and a half
Price (pence)	208	1248	832	1872	1040	1456	312
	£2.08	£12.48	£8.32	£18.72	£10.40	£14.56	£3.12

Q.3 a) $V = 6 \times 4 \times 9 = 6 \times 36 = \underline{216}$ (unit cubes)

b) $V = 5 \times 5 \times 5 = 5 \times 25 = \underline{125}$ (unit cubes)

Elicit that it is also a cube.

<h1>Y3</h1>	<p>R: Calculations C: Division. Properties of division E: <i>Divisibility</i></p>	<h2>Lesson Plan 146</h2>
Activity 1	<p>Written exercises</p> <p>T dictates operations. Ps write them down and do the calculations in <i>Ex. Bks.</i></p> <p>Review at BB with whole class. Ps explain their methods of calculation. Who made a mistakes? What kind of mistake? etc.</p> <p>Confirm order of operations (operations inside brackets first, then multiplication, then subtraction).</p> <p>BB:</p> <p>a) $413 - 127 \times 3 = \underline{32}$ b) $413 \times 3 - 127 = \underline{1112}$</p> <p>c) $(413 - 127) \times 3 = \underline{858}$ d) $413 \times 3 - 127 \times 3 = \underline{858}$</p> <p style="text-align: right;">5 min</p>	Notes Individual work, monitored, helped T also has questions written on BB or SB or OHT. Reasoning, agreement, self-correction, praising Details of calculations written on BB if problems, e.g. <p>a) $\begin{array}{r} 127 \times 3 \\ \hline 381 \end{array}$ $\begin{array}{r} 413 \\ -381 \\ \hline 32 \end{array}$</p>
2	<p>Missing numbers</p> <p>Let's fill in the missing numbers so that the statements are true.</p> <p>Ps do calculations in <i>Ex. Bks</i> or on slates first, then dictate to T or come to BB, explaining reasoning. Class points out errors.</p> <p>BB:</p> <p>a) $248 \times 4 = 496 \times \boxed{2}$ b) $74 \times \boxed{8} = 148 \times 4$</p> <p>c) $93 \times \boxed{9} = 279 \times 3$ d) $132 \times 3 = 132 \times 2 + \boxed{132}$</p> <p>e) $152 \times 4 = 152 \times 3 + \boxed{152}$ f) $108 \times 6 = 108 \times 7 - \boxed{108}$</p> <p>g) $311 \times 4 = 311 \times 6 - \boxed{622}$ h) $142 \times 3 = 71 \times 6 + \boxed{0}$</p> <p>i) $913 - 378 < \overset{\text{e.g.}}{\boxed{a}} < 137 \times 4$ (a: 536, 537, . . . 546, 547)</p> <p>j) $524 + 476 \geq \overset{\text{e.g.}}{\boxed{b}} \geq 250 \times 4$ ($b = 1000$)</p> <p style="text-align: right;">13 min</p>	<p>Whole class activity</p> <p>Written on BB or SB or OHT or use enlarged copy master</p> <p>Reasoning, agreement, praising</p> <p>Ps show calculations in detail if necessary.</p> <p>Feedback for T</p> <p>i) 12 possible whole numbers (536 to 547)</p> <p>i) and j): any letter or symbol would do.</p>
3	<p>Number line</p> <p>a) T has class number line 0 to 100. Ps come out to mark on it:</p> <p>i) multiples of 4 in <i>blue</i> (0, 4, 8, 12, 16, 20, 24, . . .) We could also say that 0, 4, 8, etc. are <u>divisible</u> by 4, i.e. they have no remainder when divided by 4.</p> <p>ii) multiples of 5 in <i>green</i> (0, 5, 10, 15, 20, . . .) We could also say that 0, 5, 10, etc. are <u>divisible</u> by 5, i.e. they have no remainder when divided by 5.</p> <p>b) Let's say the numbers which are marked in <i>blue</i> and <i>green</i>. (0, 20, 40, 60, 80, 100, . . .) What can you tell me about these numbers? (Multiples of 20 or divisible by 20)</p> <p style="text-align: right;">17 min</p>	<p>Whole class activity</p> <p>Use class number line with sticky coloured dots or draw on BB and use coloured chalk.</p> <p>At a good pace</p> <p>Ps say each set of multiples in unison.</p> <p>In unison</p> <p>Agreement, praising</p>

<h1 style="text-align: center;">Y3</h1>		<p><i>Lesson Plan 146</i></p>																										
<p>Activity</p> <p style="text-align: center;">4</p>	<p>True or false?</p> <p>T reads a statement twice. Ps write 'T' for true or 'F' for false on scrap paper or slates and show on command. Ps who answer incorrectly try to give counter examples.</p> <p>a) Every number divisible by 4 is even. Show me . . . now! (T)</p> <p>b) 0 is divisible by 4 and 5. Show me . . . now! (T)</p> <p>c) 4 is divisible by 0. Show me . . . now! (F)</p> <p>d) All whole tens are divisible by 5. Show me . . . now! (T)</p> <p>e) Every number divisible by 5 is a whole ten. Show me . . . now! (F)</p> <p>f) There is a whole ten which is not divisible by 5. (F)</p> <p>g) There are numbers divisible by 5 which are not whole tens. (T)</p> <p style="text-align: right;"><i>21 min</i></p>	<p style="text-align: center;">Notes</p> <p>Whole class activity</p> <p>Responses shown in unison</p> <p>Discussion, agreement, praising</p> <p>b) $0 \div 4 = 0$, $0 \div 5 = 0$ because $0 \times 4 = 0$, etc.</p> <p>c) No number can be divided by zero!</p> <p>e) e.g. 15 is not a whole 10</p> <p>f) Relate to d)</p> <p>g) e.g. 25</p>																										
<p style="text-align: center;">5</p>	<p>What is the rule?</p> <p>Study this table and think what the rule could be. Ps come out to fill in missing numbers and class agrees/disagrees but does not state the rule until the end.</p> <p>BB:</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td style="padding: 2px;"><i>a</i></td> <td style="padding: 2px;">0</td> <td style="padding: 2px;">1</td> <td style="padding: 2px;">2</td> <td style="padding: 2px;">3</td> <td style="padding: 2px;">4</td> <td style="padding: 2px;">5</td> <td style="padding: 2px;">9</td> <td style="padding: 2px;">13</td> <td style="padding: 2px;">17</td> <td style="padding: 2px;">18</td> <td style="padding: 2px;">20</td> <td style="padding: 2px;">24</td> </tr> <tr> <td style="padding: 2px;"><i>b</i></td> <td style="padding: 2px;">0</td> <td style="padding: 2px;">1</td> <td style="padding: 2px;">2</td> <td style="padding: 2px;">0</td> <td style="padding: 2px;">1</td> <td style="padding: 2px;">2</td> <td style="padding: 2px;">0</td> <td style="padding: 2px;">1</td> <td style="padding: 2px;">2</td> <td style="padding: 2px;">0</td> <td style="padding: 2px;">2</td> <td style="padding: 2px;">0</td> </tr> </table> <p>A, what do you think the rule is? Who agrees? Who thinks something else? etc. <i>Rule:</i> <i>b</i> is the remainder after dividing <i>a</i> by 3.</p> <p style="text-align: right;"><i>25 min</i></p>	<i>a</i>	0	1	2	3	4	5	9	13	17	18	20	24	<i>b</i>	0	1	2	0	1	2	0	1	2	0	2	0	<p>Whole class activity</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Give Ps time to think.</p> <p>At a good pace</p> <p>Agreement, praising</p> <p>Discussion, agreement, checking with values in table.</p>
<i>a</i>	0	1	2	3	4	5	9	13	17	18	20	24																
<i>b</i>	0	1	2	0	1	2	0	1	2	0	2	0																
<p style="text-align: center;">6</p>	<p>PbY3b, page 146, Q.3</p> <p>Q.1 Read: <i>Write multiplications and divisions about the diagrams.</i></p> <p>Deal with one part at a time. Elicit the number of squares in each row and column. Ps work out the total, then write operations.</p> <p>Review at BB with whole class. Elicit that the total number of squares is the <u>area</u> of the rectangle. Deal with all cases. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p style="text-align: center;">5 rows, 32 columns</p> <p>a)  e.g. $5 \times 32 = 32 \times 5 = 160$ $160 \div 5 = 32$, $160 \div 32 = 5$</p> <p>b)  $20 \times 30 = 30 \times 20 = 600$ $600 \div 30 = 20$, $600 \div 20 = 30$ $2 \times 10 \times 30 = 2 \times 300 = 600$ $600 \div 2 = 300$, $600 \div 300 = 2$ $6 \times 100 = 100 \times 6 = 600$ $600 \div 6 = 100$, $600 \div 100 = 6$ etc.</p> <p style="text-align: center;">20 rows, 30 columns</p> <p style="text-align: right;"><i>30 min</i></p>	<p>Individual work, monitored helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Discussion, reasoning, agreement, self-correcting, praising</p> <p>Revise correct mathematical terms and encourage Ps to use them:</p> <p>'factors, product, dividend, divisor, quotient, divisible by'</p>																										

<h1>Y3</h1>		<p><i>Lesson Plan 146</i></p>																								
<p>Activity</p> <p>7</p>	<p>PbY3b, Page 146</p> <p>Q.2 Read: <i>Write two divisions about each diagram.</i></p> <p>Set a time limit. Review at BB with whole class. Deal with all cases. Mistakes corrected.</p> <p>When reviewing each part, ask Ps to say the divisions in different ways in context, e.g.</p> <p>a) 'Half of 10 p is 5 p', or 'A 10 p coin can be exchanged for two 5 p coins.', or 'One fifth of 10 p is 2 p.' or 'A 10 p coin can be exchanged for five 2 p coins.'</p> <p><i>Solution:</i> e.g.</p> <table border="0"> <tr> <td>a) i) </td> <td>ii) </td> <td>iii) </td> </tr> <tr> <td>$10 \div 2 = 5$</td> <td>$100 \div 2 = 50$</td> <td>$1000 \div 2 = 500$</td> </tr> <tr> <td>$10 \div 5 = 2$</td> <td>$100 \div 5 = 20$</td> <td>$1000 \div 5 = 200$</td> </tr> </table> <table border="0"> <tr> <td>b) i) </td> <td>ii) </td> <td>iii) </td> </tr> <tr> <td>$50 \div 10 = 5$</td> <td>$500 \div 10 = 50$</td> <td>$2000 \div 10 = 200$</td> </tr> <tr> <td>$50 \div 5 = 10$</td> <td>$500 \div 50 = 10$</td> <td>$2000 \div 200 = 10$</td> </tr> </table> <p style="text-align: right;"><i>35 min</i></p>	a) i) 	ii) 	iii) 	$10 \div 2 = 5$	$100 \div 2 = 50$	$1000 \div 2 = 500$	$10 \div 5 = 2$	$100 \div 5 = 20$	$1000 \div 5 = 200$	b) i) 	ii) 	iii) 	$50 \div 10 = 5$	$500 \div 10 = 50$	$2000 \div 10 = 200$	$50 \div 5 = 10$	$500 \div 50 = 10$	$2000 \div 200 = 10$	<p>Notes</p> <p>Individual work, monitored, helped</p> <p>Coins stuck or drawn on BB or use enlarged copy master or OHP.</p> <p>Differentiation by time limit</p> <p>Discussion, agreement, self-correction, praising</p> <p>Ps who finish quickly can think of other divisions too.</p> <p>e.g. $100 \div 10 = 10$ $1000 \div 100 = 10$ $50 \div 2 = 25$ $500 \div 5 = 100$ $2000 \div 5 = 400$ etc.</p> <p>T (or P) points to divisions, Ps say matching multiplications at speed round class.</p>						
a) i) 	ii) 	iii) 																								
$10 \div 2 = 5$	$100 \div 2 = 50$	$1000 \div 2 = 500$																								
$10 \div 5 = 2$	$100 \div 5 = 20$	$1000 \div 5 = 200$																								
b) i) 	ii) 	iii) 																								
$50 \div 10 = 5$	$500 \div 10 = 50$	$2000 \div 10 = 200$																								
$50 \div 5 = 10$	$500 \div 50 = 10$	$2000 \div 200 = 10$																								
<p>8</p>	<p>PbY3b, Page 146</p> <p>Q.3 Read: <i>Do the divisions. Check them in your head with multiplications.</i></p> <p>Let's see how many of these you can do in 3 minutes! Sit up with your arms folded when you have finished.</p> <p>Review orally round class. Ps change pencils and mark/correct own work. P says whole division, then checks with reverse multiplication. e.g. '1800 \div 90 = 20, because 20 \times 90 = 1800'</p> <p>Evaluate number correct out of 24 and discuss mistakes made.</p> <p>Elicit relationships and connections. Encourage Ps to use correct mathematical terms.</p> <p><i>Solution:</i></p> <table border="0"> <tr> <td>a) $18 \div 6 = \underline{3}$</td> <td>$180 \div 60 = \underline{3}$</td> <td>b) $18 \div 9 = \underline{2}$</td> <td>$180 \div 90 = \underline{2}$</td> </tr> <tr> <td>$180 \div 6 = \underline{30}$</td> <td>$1800 \div 60 = \underline{30}$</td> <td>$180 \div 9 = \underline{20}$</td> <td>$1800 \div 90 = \underline{20}$</td> </tr> <tr> <td>$1800 \div 6 = \underline{300}$</td> <td>$1800 \div 600 = \underline{3}$</td> <td>$1800 \div 9 = \underline{200}$</td> <td>$1800 \div 900 = \underline{2}$</td> </tr> </table> <table border="0"> <tr> <td>c) $54 \div 6 = \underline{9}$</td> <td>d) $32 \div 8 = \underline{4}$</td> <td>e) $72 \div 9 = \underline{8}$</td> <td>f) $56 \div 7 = \underline{8}$</td> </tr> <tr> <td>$540 \div 6 = \underline{90}$</td> <td>$320 \div 8 = \underline{40}$</td> <td>$720 \div 9 = \underline{80}$</td> <td>f) $560 \div 7 = \underline{80}$</td> </tr> <tr> <td>$540 \div 60 = \underline{9}$</td> <td>$320 \div 80 = \underline{4}$</td> <td>$720 \div 90 = \underline{8}$</td> <td>f) $560 \div 70 = \underline{8}$</td> </tr> </table> <p style="text-align: right;"><i>40 min</i></p>	a) $18 \div 6 = \underline{3}$	$180 \div 60 = \underline{3}$	b) $18 \div 9 = \underline{2}$	$180 \div 90 = \underline{2}$	$180 \div 6 = \underline{30}$	$1800 \div 60 = \underline{30}$	$180 \div 9 = \underline{20}$	$1800 \div 90 = \underline{20}$	$1800 \div 6 = \underline{300}$	$1800 \div 600 = \underline{3}$	$1800 \div 9 = \underline{200}$	$1800 \div 900 = \underline{2}$	c) $54 \div 6 = \underline{9}$	d) $32 \div 8 = \underline{4}$	e) $72 \div 9 = \underline{8}$	f) $56 \div 7 = \underline{8}$	$540 \div 6 = \underline{90}$	$320 \div 8 = \underline{40}$	$720 \div 9 = \underline{80}$	f) $560 \div 7 = \underline{80}$	$540 \div 60 = \underline{9}$	$320 \div 80 = \underline{4}$	$720 \div 90 = \underline{8}$	f) $560 \div 70 = \underline{8}$	<p>Individual work, monitored, helped</p> <p>Differentiation by time limit.</p> <p>Checking, agreement, self-correction, praising</p> <p>Stars, stickers, etc. awarded</p> <p>Discussion, agreement, e.g. 'If dividend increases by 10 times and divisor increases by 10 times, then quotient stays the same.' Lesson Plan 147

Activity

7

PbY3b, page 147, Q.3

Read: *What is the rule? Complete the table and the graph.*

What could the letters n and d stand for? Give Ps time to think about it. Ask several Ps what they think. Elicit that n means 'number' and d means 'divisible by', so e.g. 1 is divisible by 1, 2 is divisible by 1 and 2, etc. *Rule: n is divisible by d (or d is a factor of n).*

Ps come to BB to point to completed rows in the table and then to find them on the graph. Elicit that the dots vertically above each number on the x -axis show the numbers on the y -axis by which it is exactly divisible (or which are its factors).

Let's complete the table and graph. Ps come to BB in pairs, one to fill in a row of the table and the other to draw dots on the graph. Rest of class points out errors and complete diagrams in own *Pbs* too.

Solution:

n	d
1	1
2	1, 2
3	1, 3
4	1, 2, 4
5	1, 5
6	1, 2, 3, 6
7	1, 7
8	1, 2, 4, 8
9	1, 3, 9
10	1, 2, 5, 10
11	1, 11
12	1, 2, 3, 4, 6, 12
13	1, 13
14	1, 2, 7, 14
15	1, 3, 5, 15

40 min

Notes

Whole class activity
 Drawn on BB or use enlarged copy master or OHP
 Discussion, agreement

Reasoning, agreement, praising
 Demonstrate by moving fingers along grid lines.

At a good pace
 Agreement, praising

Feedback for T

[Develops visual thinking skills.]

8

PbY3b, page 147

Q.4 Read *Circle the number which you think is the odd one out. Give a reason.*

Deal with one part at a time. Give Ps time limit to think and write, then review with the whole class.

Stand up those who circled 60. T asks a P standing why they chose 60. Who thought the same? Who had different reason? Similarly for the other numbers.

Solution: e.g.

- a) 50, as it is the only number which is not a multiple of 3, or 300, as it is the only whole hundred.
- b) 553, as it is the only number not divisible by 5, or 560, as it is the only number divisible by 4.

45 min

Individual work, monitored

Set a time limit

Encourage Ps to use mathematical terms. T repeats vague reasons correctly.

Agreement, praising

Accept any number for which a valid reason is given.

Extra praise for creative (but correct) thinking!

<h1>Y3</h1>	<p>R: Calculations C: Division E: <i>Mental procedures</i></p>	<h2 style="text-align: center;">Lesson Plan 148</h2>
<p>Activity</p> <p style="text-align: center;">1</p>	<p>Puzzles</p> <p>Study these puzzles. The rule is that the product of any two adjacent numbers is the number directly above them. Let's fill in the missing numbers. Ps come to BB to write numbers and explain reasoning. Class agrees/disagrees.</p> <p>Do the top row of a) and b) only if Ps want to try it. T could give hints to Ps to help them or if Ps are struggling, show how to do it.</p> <p>BB:</p> <p>a) </p> <p>b) </p> <p>c) </p> <p>Top row: e.g.</p> <p>a) $2H \times 8H = 2H \times 8 \times 1H = 16H \times 10 \times 10 = 16Th \times 10 = \underline{160Th} \text{ (160 000)}$</p> <p>b) $4H \times 8T = 4H \times 8 \times 10 = 32H \times 10 = \underline{32Th} \text{ (32 000)}$</p> <p style="text-align: right;"><i>5 min</i></p>	<p style="text-align: center;">Notes</p> <p>Whole class activity Drawn on BB or use enlarged copy master or OHP At a good pace Bold numbers are given. Reasoning, agreement, praising</p> <p>Stress logical deduction rather than trial and error or guess-work!</p> <p>Elicit that $1H \times 10 = 1Th$ Extra praise if Ps can do it but do not worry if they cannot.</p>
<p style="text-align: center;">2</p>	<p>Which statement is true?</p> <p>T asks a P to read each statement, then class decides whether or not it is true. Ps write 'T' for true or 'F' for false on slates or scrap paper and show on command (or use pre-agreed actions). T asks Ps to give an example (or counter example) for each.</p> <p>BB:</p> <p>a) All the multiples of 3 are even numbers. (F) e.g. 9 is odd b) Not all the multiples of 3 are odd numbers. (T) e.g. 6 is even. c) Not all the numbers divisible by 4 are even. (F) <u>All</u> are even. d) A number which is a multiple of 4 is also a multiple of 2. (T)</p> <p style="text-align: right;"><i>8 min</i></p>	<p>Whole class activity Written on BB or SB or OHT Responses shown in unison.</p> <p>Reasoning, agreement, praising Agree that only one counter example is needed to prove that a statement is false.</p>
<p style="text-align: center;">3</p>	<p>Missing numbers</p> <p>Study the diagrams. What do the arrows mean? Ps come to BB to fill in the missing numbers. Class checks that they are correct. Elicit that multiplication and division are opposite operations. What other pairs of operations are opposite operations? (addition and subtraction)</p> <p>BB:</p> <p>a) </p> <p>b) </p> <p>c) </p> <p>d) </p> <p style="text-align: right;"><i>12 min</i></p>	<p>Whole class activity Drawn on BB or use enlarged copy master or OHP At a good pace Agreement, checking, praising</p> <p>Elicit that, e.g.</p> <ul style="list-style-type: none"> • 360 is a <u>multiple</u> of 36 and 10 • 36 and 10 are <u>factors</u> of 360 • 360 is <u>divisible by</u> 36 and 10 etc.

Y3		<i>Lesson Plan 148</i>
Activity 4	Find the mistakes <i>Dizzie Dumble</i> has done his homework in a hurry again! Let's mark it for him and correct his mistakes. Ps come to BB to do calculations, tick the correct operations and correct the wrong ones. Class agrees/disagrees. BB: a) $220 \div 2 = \overset{110}{\cancel{100}} \times$ b) $540 \div 9 = \overset{60}{\cancel{70}} \times$ c) $480 \div 4 = 120 \checkmark$ d) $426 \div 6 = 71 \checkmark$ e) $270 \div 3 = \overset{90}{\cancel{900}} \times$ f) $567 \div 7 = \overset{81}{\cancel{8}} \times$ <div style="text-align: center;">17 min</div>	Notes Whole class activity Written on BB or SB or use enlarged copy master or OHP At a good pace Reasoning, checking, correcting, praising Give details if problems: e.g. $426 \div 6 = 420 \div 6 + 6 \div 6$ $= 70 + 1 = \underline{71}$ $567 \div 7 = 560 \div 7 + 7 \div 7$ $= 80 + 1 = \underline{81}$
5	Division practice T has BB already prepared. Who can work out the quotients? Ps come out to BB to fill in missing numbers explaining reasoning. Ps write details of calculations at side of BB if necessary. Class points out errors. What do you notice? Ps point out connections. (e.g. If dividend is increased by 10 times, then quotient also increases by 10 times.) BB: a) $48 \div 4 = (12)$ b) $96 \div 3 = (32)$ $480 \div 4 = (120)$ $960 \div 3 = (320)$ c) $186 \div 6 = (31)$ d) $128 \div 4 = (32)$ $1860 \div 6 = (310)$ $1280 \div 4 = (320)$ <div style="text-align: center;">21 min</div>	Whole class activity Written on BB or SB or OHT Reasoning, agreement, checking, praising Details, e.g. $128 \div 4 = 120 \div 4 + 8 \div 4$ $= 30 + 2 = \underline{32}$ Ps check orally with mental multiplication, e.g. $32 \times 4 = 120 + 8 = 128 \checkmark$
6	PbY3b, page 148 Q.1 Read: <i>Do the divisions. Check them in your head with multiplications.</i> Review orally round class. Ps give quotients and check with a multiplication. Ps show details on BB if problems, e.g. BB: $1550 \div 5 = 1500 \div 5 + 50 \div 5 = 300 + 10 = \underline{310}$ Mistakes discussed and corrected. <i>Solution:</i> a) $189 \div 9 = \underline{21}$ b) $126 \div 3 = \underline{42}$ $1890 \div 9 = \underline{210}$ $1260 \div 3 = \underline{420}$ c) $168 \div 8 = \underline{21}$ d) $155 \div 5 = \underline{31}$ $1680 \div 8 = \underline{210}$ $1550 \div 5 = \underline{310}$ <div style="text-align: center;">26 min</div>	Individual work, monitored Ps may do calculations in <i>Ex Bks</i> if necessary. Agreement, checking, self-correcting, praising
7	PbY3b, page 148 Q.2 Read: a) <i>Circle the numbers in this list which are divisible by 3.</i> b) <i>Circle the numbers in this list which are multiples of 4.</i> Review at BB with whole class. T has numbers written on BB and circles what Ps dictate. Ps show details on BB if problems: e.g. $1568 \div 3 = 1500 \div 3 + 60 \div 3 + 8 \div 3$ $= 300 + 20 + 2, r 2, \text{ so } 1568 \text{ is } \underline{\text{not}} \text{ divisible by } 3.$ <div style="text-align: center;">$\checkmark \quad \checkmark \quad \times$</div> Mistakes discussed and corrected. <div style="text-align: center;">30 min</div>	Individual work, monitored Set a time limit. Ps do calculations in <i>Ex Bks</i> . Agreement, checking, self-correcting, praising <i>Solution:</i> Numbers circled: a) 0, 9, 60, 69, 1500, 1569 b) 0, 4, 80, 84, 1200, 1284

PbY3b, page 148, Q.3

Read: Write the whole numbers from 0 to 20 in the correct column in the table.

Ps come to BB one after the other BB: to write a number in correct place in table.

Rest of Ps point out errors.

Remainder after dividing by 7						
0	1	2	3	4	5	6
0	1	2	3	4	5	6
7	8	9	10	11	12	13
14	15	16	17	18	19	20

Read: Draw dots in the graph to show the remainders.

Who can explain what the graph means? (x-axis shows the whole numbers from 0 to 20 and y-axis shows the remainders from 0 to 7)

P comes to BB to point to the relevant number on the x-axis with right hand and to relevant remainder on y-axis with left hand, then moves both fingers along the grid lines until they meet.

P draws a large dot at the point where the grid lines meet.

Class points out errors.

Read: Are these statements true? Write a tick if it is true and a cross if it is false.

T chooses a P to read each. Ps draw a tick or a cross in Pbs and show responses on command by pre-agreed actions, e.g. both hands in the air for a cross, knock on desk for a cross.

- a) If we divide a number by 7, the remainder is less than 7. (✓)
- b) If we divide a number by 7, the remainder can be 7. (X)
- c) If the remainder is 0 after dividing a number by 7, the number is a multiple of 7. (✓)
- d) If we divide a number by 7, then 7 different remainders are possible. (If we count 0 as a remainder too.) (✓)

38 min

Notes

Whole class activity

Drawn on BB or use enlarged copy master or OHP

At a good pace

Ps complete table in Pbs too.

Agreement praising

Discussion, explanation with reference to graph.

Involve several Ps.

At a good pace

Agreement, praising

Ps could write numbers at every grid line if they have difficulty identifying the correct one.

Read each statement twice to give Ps time to think.

Responses shown in unison.

Ps who respond incorrectly try to give an example.

Discussion, agreement, praising

Discussion on whether zero can be counted as a remainder.

$7 \div 7 = 1$, remainder 0, is not incorrect, just not needed!

9

PbY3b, page 148

Q.4 Read: Write the whole numbers from 10 to 25 in the correct number sets.

Talk about what is required for each diagram. Elicit that:

- n means a whole number which is more than 10 and less than 25: 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24 (BB)
- the RH diagram is a combination of the first 2 diagrams but where the ellipses overlap, Ps should write those numbers which are multiples of both 3 and 4.

Review after each part if Ps are unsure. Mistakes corrected.

Which of the numbers is:

- a) divisible by 3 but not by 4? (e.g. 18)
- b) divisible by 4 but not by 3? (e.g. 16)
- c) a multiple of 3 and 4? (e.g. 24)
- d) not divisible by 3 and not divisible by 4? (e.g. 17)

Individual work, monitored, helped

Sets drawn on BB or use enlarged copy master or OHP

Discussion. Agree that numbers not multiples of 3 or 4 are written inside the square but outside the ellipses.

BB: ellipse

Activity

4

PbY3b, page 149

Q.1 Read: *Peter, Rob and Sally have the same amount of money in their bank accounts. Altogether, they have £969. Circle what each of them has.*

Ps draw around each person's money (or colour with 3 different colours). Elicit that each person has £323 (3H + 2T + 3U).

Read: *Complete the calculation.*

Ps fill in missing numbers in *Pbs*, then check against diagram.

Review at BB with whole class. Ps dictate what T should write. Mistakes discussed and corrected.

BB: $969 \div 3 = 900 \div 3 + 60 \div 3 + 9 \div 3 = 300 + 20 + 3 = 323$

Let's show it in a place value table. T explains table (with Ps' help) then shows it without HTU and in the form of long division.

BB:

The diagrams show three ways to represent the division of 969 by 3. The first is a place value table with columns H, T, U. The second is a long division table with columns 9, 6, 9, +, 3, =, 3, 2, 3. The third is a vertical long division table with columns 3, 2, 3 and rows 3, 9, 6, 9.

22 min

Notes

Individual work, monitored, helped

Money drawn or stuck on BB or use enlarged copy master or OHP

BB

Discussion, reasoning, agreement, self-correcting, praising

Whole class activity

Drawn on BB or use enlarged copy master or OHP

Either explain each step referring to relevant parts of completed tables, or build up blank tables gradually (with Ps' help if they begin to understand).

5

PbY3b, page 149

Q.2 Read: *Fill in the missing numbers*

Do parts a) and b) with whole class first as a model for Ps to follow. Ps dictate what to write at each step. T writes on BB and Ps in *Pbs*.

Rest done as individual work under a time limit.

Review parts c) and d) with whole class. Ps come to BB or dictate what to write. Class agrees/disagrees. Mistakes corrected.

Solution:

- a) $840 \div 4 = 800 \div 4 + 40 \div 4 = 200 + 10 = 210$
 $630 \div 3 = 600 \div 3 + 30 \div 3 = 200 + 10 = 210$
- b) $650 \div 5 = 500 \div 5 + 150 \div 5 = 100 + 30 = 130$
 $768 \div 4 = 400 \div 4 + 360 \div 4 + 8 \div 4 = 100 + 90 + 2 = 192$
- c) $840 \div 6 = 600 \div 6 + 240 \div 6 = 100 + 40 = 140$
 $459 \div 3 = 300 \div 3 + 150 \div 3 + 9 \div 3 = 100 + 50 + 3 = 153$
- d) $910 \div 7 = 700 \div 7 + 210 \div 7 = 100 + 30 = 130$
 $960 \div 8 = 800 \div 8 + 160 \div 8 = 100 + 20 = 120$

Details of the division opposite: $4H \div 3 = 1H$, and 1H remains
 $1H = 10T$, $10T + 5T = 15T$
 $15T \div 3 = 5T$
 $9U \div 3 = 3U$

29 min

Whole class activity to start
 Written on BB or use enlarged copy master or OHP

Discuss the 'clever' way that the 3-digit numbers have been broken down into numbers which are easily divisible by the divisor.

Involve several Ps.

Reasoning, agreement, checking with multiplication, self-correcting, praising

T shows vertical form for one of the divisions, explaining details of each step:

BB:

The diagram shows a vertical long division table for 969 divided by 3. The columns are 1, 5, 3 and the rows are 3, 4, 5, 9. Arrows point to the steps: 3 x 1H, 3 x 5T, and 3 x 3U.

Y3

Lesson Plan 149

Activity

6

Different methods of division

Let's divide £527 into 3 equal parts in different ways. First, let's estimate each part. Agree that it will be more than £100 and less than £200.

a) Using a model

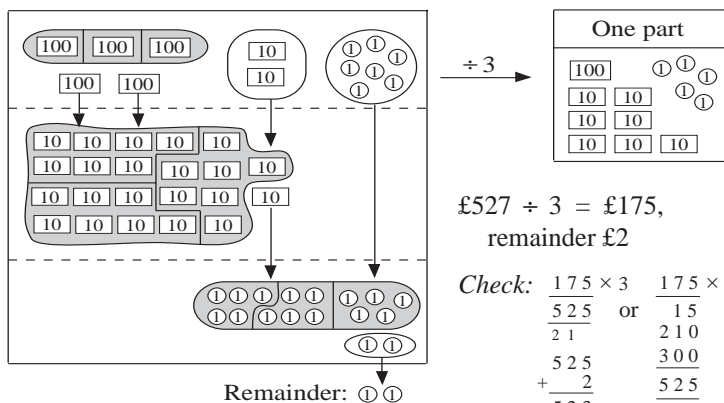

Let's start by dividing up the hundreds. 3 Ps come to BB to take 1H each and stick on their part of BB.

How many hundreds remain? (2H) How can we divide 2H among 3 people? (Change the 2H into 20T and add the 2T already there: $20T + 2T = 22T$.) The 3 Ps each take 7T and stick to their part of BB.

How many tens remain? (1T) How can we divide 1T among 3 people? (Change the 1T to 10U and add the 7U already there.

$10U + 7U = 17U$) The 3 Ps each take 5U and stick to their part of the BB. How many units remain? (2U) Can we divide 2U among 3 people? (Not unless we divide them into fractions) So there will be a remainder of 2U.

BB: £: £100 < one part < £200

$$£527 \div 3 = £175, \text{ remainder } £2$$

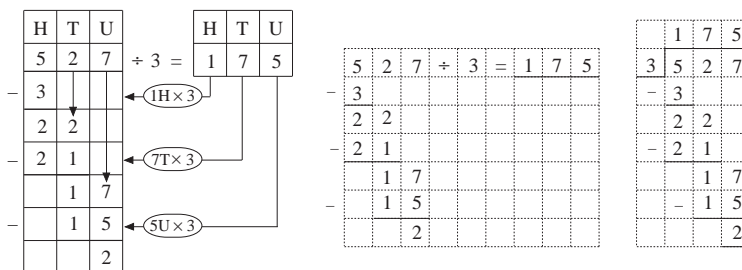

Check: $175 \times 3 = 525$ or $175 \times 3 = 525$

$$\begin{array}{r} 175 \times 3 \\ 525 \\ + \quad 2 \\ \hline 527 \end{array}$$

b) Vertical division

We could show it in a shorter way like this. T explains each step in relation to the diagram above.

BB:

c) Horizontal division

T has BB or SB or OHT already prepared. Ps come to BB to fill in missing numbers, explaining reasoning. Class agrees/disagrees.

BB: $527 \div 3 = 300 \div 3 + \square \div 3 + \square \div 3$
 $= \square + \square + \square = \square$
 r 2 r 2

T reminds Ps that 'r' (or 'R') can be written instead of 'remainder'.

Notes

Whole class activity

Table drawn on BB and model money stuck to it (or use completed enlarged copy master or OHP and T explains, referring to diagram at each step)

Discussion, agreement, praising
 T leads Ps through, with Ps' help if they understand

BB: $527 \div 3 = ?$

Calculation:

$5H \div 3 = 1H$, as $1H \times 3 = 3H$
 remainder 2H $2H = 20T$

$20T + 2T = 22T$

$22T \div 3 = 7T$, as $7T \times 3 = 21T$
 remainder 1T $1T = 10U$

$10U + 7U = 17U$

$17U \div 3 = 5U$, as $5U \times 3 = 15U$
 remainder 2U

Drawn on BB or use enlarged copy master or OHP

Uncover each part as it is dealt with.

T sets a language model for long division, e.g.

'3 divides into 5 1 time, so I write 1 in the H column in the answer. $1H \text{ times } 3 = 3H$, $5H - 3H = 2H = 20T$. I bring down the 2T to make 22T.

3 divides into 22T 7 times, so I write 7 in the T column in the answer. $7T \text{ times } 3 = 21T$, $22T - 21T = 1T = 10U$. I bring down 7U to make 17U.

3 divides into 17U 5 times, so I write 5 in the U column in the answer. $5U \text{ times } 3 = 15U$, $17U - 15U = 2U$, which is the remainder.

$527 \div 3 = 175, \text{ remainder } 2'$

<h1>Y3</h1>		<p>Lesson Plan 149</p>																								
<p>Activity</p> <p>6</p>	<p>(Continued)</p> <p>d) George did it this way. BB: $\begin{array}{r} 3 \ 5 \ 2 \ 7 \\ - \quad 3 \ 0 \quad 1 \ 0 \\ \hline 4 \ 9 \ 7 \\ - \ 3 \ 0 \ 0 \ 1 \ 0 \ 0 \\ \hline 1 \ 9 \ 7 \\ - \ 1 \ 8 \ 0 \quad 6 \ 0 \\ \hline \quad 1 \ 7 \\ \hline \quad - \ 1 \ 2 \quad 4 \\ \hline \quad \quad 5 \\ \hline \quad \quad - \ 3 \quad 1 \\ \hline \quad \quad \textcircled{2} \ 1 \ 7 \ 5 \ r \ 2 \end{array}$</p> <p>Do you think that he is correct? Can you explain what he has done? Ask several Ps what they think. T gives hints if no P understands, or leaves open to give Ps more time to think and reviews it in <i>Lesson 150</i>. Agree that it is correct but very slow and George has not done it very cleverly.</p> <p><i>Method:</i> George thinks of a number divisible by 3 and writes its quotient on RHS of vertical line. Then he subtracts the multiple and continues with what is left in a similar way. When there are no more multiples of 3, he adds up all the quotients to give the final result, remembering to write what is left as the remainder.</p> <p>Extension Ps think of a more efficient way to use this method.</p> <p style="text-align: right;">38 min</p>	<p>Notes</p> <p>Whole class activity Drawn on BB or use enlarged copy master or OHP. Ps could have copies on desks too. Give Ps time to think and discuss with neighbours. Praise all contributions. T helps Ps express their explanations if necessary. Involve several Ps</p> <p>[Practice in visual analysis and creative thought.]</p> <p>e.g. Use 300, then 210, then 15</p>

4

Written exercises

T dictates two operations. Ps write in *Ex. Bks.* Which of them is more? How many more? Do the calculations in whichever way you wish. Review at BB with whole class. Ps come to BB to write whole inequality, explaining reasoning. Class agrees/disagrees. e.g.

a) One fifth of 525 or 1 eighth of 472?

e.g. $525 \div 5 = 500 \div 5 + 25 \div 5 = 100 + 5 = 105$
 $472 \div 8 = 400 \div 8 + 72 \div 8 = 50 + 9 = 59$
 $105 - 59 = 46$
 so $525 \div 5 > 472 \div 8$

b) One sixth of 546 or 1 third of 963?

e.g. $546 \div 6 = 540 \div 6 + 6 \div 6 = 90 + 1 = 91$
 $963 \div 3 = 900 \div 3 + 60 \div 3 + 3 \div 3 = 300 + 20 + 1 = 321$
 $321 - 91 = 230$
 so $546 \div 6 < 963 \div 3$

c) One seventh of 735 or 1 fifth of 735?

e.g. $735 \div 7 = 700 \div 7 + 35 \div 7 = 100 + 5 = 105$
 $735 \div 5 = 500 \div 5 + 200 \div 5 + 35 \div 5 = 100 + 40 + 7 = 147$
 $147 - 105 = 42$
 so $735 \div 7 < 735 \div 5$

22 min

Notes

Individual work in calculating, monitored

Whole class discussion of results and methods of calculation.

T shows various written procedures for division.

e.g.

	1	4	7
5	7	3	5
-	5		
	2	3	
-	2	0	
		3	5
-		3	5
			0

BB:

This form develops estimating skills and is good for less able Ps.

5	7	3	5			
-	5	0	0	1	0	0
	2	3	5			
-	1	0	0		2	0
	1	3	5			
-	1	0	0		2	0
		3	5			
-		3	5			7
			0	1	4	7

5

Find the mistakes

Mr. Silly did his divisions like this. Let's check if he has calculated them correctly. Ps identify mistakes by estimation or in other ways. Ps come to BB to point and explain. Class agrees/disagrees that there is an error. Ps write the calculations again correctly.

BB:

Deduction

Correct calculation:

a) Answer: ~~15~~, r 2

	1		5
3	3	1	7
-	3		
	0	1	7
-		1	5
			2

e.g. $3 \times 15 = 45 \neq 317$
 $317 \div 3 \approx 100$
 He forgot to write 0 in the tens column in the answer.
 Check: $317 = 3 \times 105 + 2$

Answer: 105, r 2

	1	0	5
3	3	1	7
-	3		
	0	1	7
-		1	5
			2

b) Answer: ~~24~~, r 3

	2	4	0
4	9	6	3
-	8		
	1	6	
-	1	6	
		0	3

$4 \times 24 < 963$
 $963 \div 4 \approx 200$
 He did not finish it. He should have written 0 in the units column in the answer.
 Check: $963 = 4 \times 240 + 3$

Answer: 240, r 3

	2	4	0
4	9	6	3
-	8		
	1	6	
-	1	6	
		0	3

Whole class activity

Written on BB or use enlarged copy master or OHP

Praise clever methods of deduction.

Reasoning, agreement, correcting, checking, praising

Ps write calculation correctly in any way they choose.

Show each calculation in different ways. (vertical and horizontal division or subtracting known multiples)

Praising, encouragement only

Feedback for T

Answer: 197 litres of water were poured out.

Extension

Ps calculate how many litres were left for each part.

- a) 14 litres b) 266 litres c) 1379 litres

39 min

Notes

Whole class activity

Ps come to BB to show different methods of doing the calculation.

Class decides whether they are correct or suggests alternative methods.

Reasoning, agreement, praising

Ps write plan, horizontal method of calculation and answer in *Pbs*.

Individual work in *Ex. Bks*. Monitored and reviewed with whole class.

8

PbY3b, page 151

Q.4 Read: *Share the amount equally among the groups of people. Complete the table.*

Talk about the table first. Make sure that Ps know what each row means. Relate to the mathematical terms for division.

Let's see how much of the table you can complete in 4 minutes! You can do the columns in any order. You may do the calculations in your *Ex. Bks*. Start . . . now! . . . Stop!

Review at BB with whole class. Ps come to BB or dictate results to T, explaining reasoning. Who had the same answer but worked it out in a different way? Who thinks something different? etc. How can we check it? (By multiplication and addition – done orally or on BB.) Mistakes discussed and corrected.

Solution:

Total amount	501	374	895	764	771	995	984	753	Dividend
Number of people	5	3	7	4	6	9	8	2	Divisor
Amount each	100	124	127	191	128	110	123	376	Quotient
Amount remaining	1	2	6	0	3	5	0	1	Remainder

Details of calculations: e.g. $110 \times 9 + 5 = 995$, or

	1	1		

Individual work, monitored, helped

Table drawn on BB or use enlarged copy master or OHP

Differentiation by time limit and by choice of columns.

Discussion, reasoning, checking, agreement, self-correcting, praising

Accept any correct form of calculation.

Check: e.g.

$$124 \times 3 + 2 = 372 + 2 = \underline{374}$$

$$768 + 3 = \underline{771}$$

$$752 + 1 = \underline{753}$$

45 min

<h1>Y3</h1>	R: Calculation C: Contextual problems for division E: <i>To one from more. (To more from more.)</i>	<h2>Lesson Plan 152</h2>
Activity 1	True or false? T has these number cards stuck to BB. 0 8 12 20 24 36 If I put them in a box and took one out without looking, would these statements be true or false? Write 'T' for true or 'F' for false and show me your answer when I say. a) It is certain that the number will be a multiple of 4. Show me . . . now! (T) All the numbers are multiples of 4. b) It is possible that the number will be divisible by 3. Show me . . . now! (T) e.g. 0, 12, 24 and 36 are divisible by 3 c) It is not certain that the number will be divisible by 2. Show me . . . now! (F) e.g. all multiples of 4 are divisible by 2 d) It is impossible that the number will be a multiple of 5. Show me . . . now! (F) e.g. 20 is a multiple of 5 e) It is possible that the number will be a multiple of 8. Show me . . . now! (T) e.g. 8 and 24 are multiples of 8 f) It is certain that the number will be divisible by 6. Show me . . . now! (F) e.g. 8 and 20 are not divisible by 6 <p style="text-align: right;">5 min</p>	Notes Whole class activity Responses written on scrap paper or slates and shown on command in unison. Ps explain the reason for their decisions, giving examples or counter examples as appropriate. Agreement, praising Feedback for T
2	Secret numbers I am going to think of some numbers and give you clues about them. You can write notes in your <i>Ex. Bks</i> (or on slates or scrap paper) to help you if you wish. Show me the numbers when I say. Which number could I be thinking of? a) It is greater than 20, less than 30 and a multiple of 4 and 8. Show me . . . now! (24) b) It is less than 30 and is divisible by 3 and 9. Show me . . . now! (0, 9, 18, 27) c) It is a 2-digit number greater than 80 and a multiple of 2 and 5. Show me . . . now! (90) d) It is less than 40 and divisible by 2 and 3. Show me . . . now! (0, 6, 12, 18, 24, 30, 36) <p style="text-align: right;">10 min</p>	Individual trial in <i>Ex. Bks</i> first Give Ps time to think and write. Responses written on scrap paper or slates and shown on command in unison. Ps explain reasoning and class agrees/disagrees or points out possible numbers not listed. Praising, encouragement only Ps could make up some statements too!
3	PbY3b, page 152 Q.1 Read: a) <i>How much money could Neil have? He has more than £50 but less than £100. He could change his money exactly into £2 coins or £5 notes.</i> b) <i>How many pupils can be in this class? There are less than 30 pupils. The pupils can sit in groups of 2 or 3 or 4 without any pupils being left out.</i> Ps read problems themselves then write possible numbers in <i>Pbs</i> . Review with whole class. Ps give their answers, explaining their reasoning. Who agrees? Who thinks something else? etc. <i>Solution:</i> a) If divisible by 5, numbers must have units digit 5 or 0, but if also divisible by 2, they cannot have units digit 5. Possible amounts: £60, £70, £80 or £90 b) Number in class must be a multiple of 2, 3 and 4: Possible numbers: 12 or 24 <p style="text-align: right;">15 min</p>	Individual work, monitored, helped Discussion at BB, reasoning, agreement, self-correcting, praising Encourage Ps to explain using mathematical terms. Agree that 24 is probably more likely in real life.

Y3

Lesson Plan 152

Activity

4

Missing values

Listen carefully and think what equation you would write to find the missing whole numbers.

a) *What is the dividend if the divisor is 6, the quotient is 9 and the remainder is 5?*

A, come and show us what you would write. Who agrees? Who thinks something else? etc.

BB: e.g. $\square \div 6 = 9$, remainder 5
so $\square = 9 \times 6 + 5 = 54 + 5 = \underline{59}$

b) *What is the quotient if the dividend is 45, the divisor is 7 and the remainder is 3?*

B, come and show us what you would write. Who agrees? Who thinks something else? etc.

BB: e.g. $45 \div 7 = \square$, remainder 3
so $\square = (45 - 3) \div 7 = 42 \div 7 = \underline{6}$

Extension

c) *What is the quotient if the dividend is 45, the divisor is 7 and the remainder is 6?*

C, come and show us what you would write. Who agrees? Who thinks something else? etc.

BB: e.g. $45 \div 7 = \square$, remainder 6
so $\square = (45 - 6) \div 7 = 39 \div 7 = ?$

Agree that 7 is not a factor of 39 (or 39 is not divisible by 7), so the quotient cannot be a whole number.

20 min

Notes

Whole class, activity

T repeats each part slowly.

Reasoning, agreement, checking, praising

Check:

		9
6	5	9
-	5	4

<p style="text-align: center;">7</p>	<p>PbY3b, page 152</p> <p>Q.2 Read: <i>Is it possible to answer the question with the data given? If it is, solve it.</i></p> <p>Deal with one part at a time. Set a time limit.</p> <p>Review with whole class. T chooses a P to read the question. Stand up if you could solve it! How did you solve it? etc. Solutions shown on BB. Mistakes corrected.</p> <p><i>Solution:</i></p> <p>a) <i>10 kg of bananas costs £9.40. What is the price of 1 kg of bananas?</i> (£9.40 = 940 p; 940 p ÷ 10 = <u>94 p</u>)</p> <p>b) <i>Steve bought 10 different bars of chocolate and paid £12.00 altogether. What was the price of 1 bar of chocolate?</i> (Cannot be solved. Different bars might have different prices.)</p> <p>c) <i>Karen is 9 years old. She weighs 27 kg. What did she weigh when she was 1 year old?</i> (Cannot be solved. There is no direct proportion between age and mass.)</p> <p>d) <i>3 men worked steadily and painted a 540 m fence in 9 days. How many days would it have taken 1 man to paint the same fence?</i> (3 men → 9 days, 1 man → 9 d × 3 = <u>27 d</u>)</p> <p style="text-align: right;"><i>36 min</i></p>	<p>Individual worked, monitored, helped</p> <p>Questions could be written on BB or SB or OHT.</p> <p>Discussion, reasoning, agreement, self-correcting, praising</p> <p>Price per kg is the same for <u>any</u> quantity of bananas.</p> <p><u>Inverse proportion:</u> The fewer the workmen, the longer it takes to do the same job – 1 third less men take 3 times more days.</p>																																

Y3*Lesson Plan 152***Activity****8****PbY3b, pag 152**

Q.3 Read: *Write the data. Make a plan. Estimate, calculate, check and write the answer.*

Deal with one part at a time. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes corrected. T reminds Ps about direct proportion.

a) *A spider has 8 legs. How many spiders have 864 legs?*

Data: 1 spider: 8 legs *Plan:* $864 \div 8$

? spiders: 864 legs *Estimate:* ≈ 100

Calculation: $864 \div 8 = 800 \div 8 + 64 \div 8 = 100 + 8 = 108$

Answer: 108 spiders have 864 legs.

b) *A flower has 5 petals. How many flowers have 685 petals?*

Data: 1 flower: 5 petals *Plan:* $685 \div 5$

? flowers: 685 petals *Estimate:* ≈ 100

Calculation: e.g. $685 \div 5 = 500 \div 5 + 150 \div 5 + 35 \div 5$

$= 100 + 30 + 7 = 137$

or using vertical division:

	1	3	7
5	6	8	5
-	5		
	1	8	
-	1	5	
		3	5
		-	3
			5
			0

Answer: 137 flowers have 685 petals.

*42 min***Notes**

Individual work, monitored, helped

Discussion, reasoning, agreement, self-correction, praising

BB: Direct proportion

$\times 108$ 1 spider \rightarrow 8 legs $\times 108$

108 spiders \rightarrow 864 legs

Check: $108 \times 8 = 864$ ✓

$\times 137$ 1 flower \rightarrow 5 petals $\times 137$

137 flowers \rightarrow 685 petals

Check: $\frac{137}{685} \times 5$
 $\frac{685}{13}$ ✓

Feedback for T

9**Direct proportion**

Listen carefully and think how you would work out the answer to this problem

3 tickets cost £6.30. How much do 5 tickets cost?

T asks several Ps what they think. If nobody knows, T leads Ps through solution using direct proportion:

BB:

T gives other problems for Ps to calculate mentally as consolidation.

Ps write problems in form given above. e.g.

- If 5 pencils cost 55 p, how much will 7 pencils cost? (77p)
- If 10 m of ribbon cost 80 p, how much can you buy for 48p? (6 m)

45min

Whole class activity

Discussion, reasoning, agreement, praising

Ps come to BB to write and explain.

Agree that if two things are in direct proportion, if one increases (decreases) by a certain number of times, then the other increases (decreases) by the same number of times.

Ps could think of a problem too!

Y3

R: Calculation
 C: **Probability: simple experiments**
 E: Estimation of chance (probability)

Lesson Plan 153

Activity

1

Missing numbers and signs 1

What is missing from these diagrams? Ps come to BB to write in missing numbers and operation signs, explaining reasoning. (Ps can do calculations in *Ex. Bks* first before coming to BB.) Class agrees/disagrees. What do you notice?

6 min

Notes

Whole class activity

Drawn on BB or use enlarged copy master or OHP

At a good pace

Reasoning, agreement, praising

Agree that:

- if the dividend increases by 2 times, the quotient also increases by 2 times.
- division is the inverse operation of multiplication.

What is the inverse operation of addition? (subtraction)

2

Missing numbers and signs 2

Let's write the missing numbers and operation signs in these diagrams.

P can do calculations in *Ex. Bks* first before coming to BB.

What do you notice? (Dividing by 2 and then dividing by 3 is the same as dividing by 6, etc.)

10 min

Whole class activity

Drawn on BB or use enlarged copy master or OHP

At a good pace

Reasoning, agreement, praising

Ps write details of calculations at side of BB.

Accept any correct method.

Feedback for T

3

Order of operations

T has BB already prepared. First revise order of operations.

(Operations inside brackets first, then multiplication or division (L to R), then addition or subtraction (L to R). If only multiplication or division, or only addition or subtraction, operations done from L to R.)

Deal with one part at a time. Which operation should we do first?

Ps come to BB to point, explaining choice. Class agrees/disagrees.

Copy the operations in your *Ex. Bks* and calculate the results.

Review with whole class. Mistakes discussed and corrected.

- BB: a) $624 \div 8 - 6 =$ [78 - 6 = 72]
 $624 \div (8 - 6) =$ [624 \div 2 = 312]
 $624 \div 6 - 8 =$ [104 - 8 = 96]
- b) $116 \times 8 \div 4 =$ [928 \div 4 = 232]
 $116 \times (8 \div 4) =$ [116 \times 2 = 232]
 $116 \div 4 \times 8 =$ [29 \times 8 = 232]
- c) $1600 \div 8 \div 2 =$ [200 \div 2 = 100]
 $1600 \div (8 \div 2) =$ [1600 \div 4 = 400]
 $1600 \div 2 \div 8 =$ [800 \div 8 = 100]

Lesson Plan 153

Activity

4

Probability

This is a diagram of a game. If I put a marble in the top, where could it fall? Ps come to BB to show the different ways. (Or T and/or Ps have models of the game and Ps note the different ways.)

Let's write down all the possible ways it could fall. T starts but Ps continue when they understand. Elicit that there are 4 possible ways but in 2 of them the marble will come out at B.

BB:

Possible ways

- Left → Left → A
 - Left → Right → B
 - Right → Left → B
 - Right → Right → C
- 4 possible ways

Listen carefully to what I say and show me whether you think it is possible, impossible or certain by writing 'P', 'I' or 'C'.

- a) *The marble can get to A and B at the same time.* (I)
- b) *If I dropped the marble 20 times, it will come out at A 2 times.* (P)
- c) *The marble will come out at A, B or C.* (C)

If we dropped the marble 4 times, how many times might it come out at A? (most likely 1 time) Why do you think so? Ps explain in own words and T repeats by referring to the 4 possible ways above. We say that it has 1 chance out of 4 possible ways, or that it has a probability of 1 in 4.

Repeat for B and C. (Expected outcomes: B: 2 in 4, C: 1 in 4)

If we dropped the marble 8 (20, 40, 100) times, how many times do you think it might come out at A (B, C)? Ask several Ps what they think and why. Write summary on BB. Relate to direct proportion.

NOTE:

e.g.

If T has this game in the classroom, do the experiment of dropping the marble 20 times, noting where it comes out in a tally chart, as opposite, then compare the results with the expected outcome.

	Tally of 20 drops	Totals
A		5
B		11
C		4
		20

Extension

Talk about the fact that the more times you do the experiment, the closer you will get to the expected outcome (result). If you did the experiment 1000 times, what would you expect the outcome to be?

25 min

5

PbY3b, page 153, Q.1

Let's do another experiment! If possible, T has 3 opaque bags of marbles to match those described in the question.

Read: *I have 3 bags of marbles. Bag A contains 10 marbles, Bag B contains 20 marbles and Bag C contains 30 marbles. One marble in each bag is red.*

A P comes to front of class for each part and reads the statement. Allow time for thought, then Ps show flash cards (or slates) on command. P at front demonstrates statement and checks correct response.

Solution:

- a) i) Possible, not certain; ii) Impossible; iii) Possible but not certain, as we don't know if the bag contains blue marbles;
- b) Bag A

30 min

Notes

Whole class activity

Drawn on BB or use enlarged copy master or OHP

Or T has real game in classroom for demonstration or Ps work in pairs with one game per pair.

Ps dictate to T and T writes on BB.

Responses written on scrap paper or slates (or use flash cards from Y2 LP 154/2) and shown in unison.

Ps who responded correctly explain to those who did not.

Discussion, explanation, agreement, praising

BB: Probability

A: 1 in 4 = 2 in 8 = 5 in 20
 B: 2 in 4 = 4 in 8 = 10 in 20
 C: 1 in 4 = 2 in 8 = 5 in 20

If there are enough games for 1 between two, Ps could work in pairs and make own tally chart, then add to data from other pairs to give a class total.

[A computer simulation would be ideal for 1000 times.]

About: A: 250, B: 500, C: 250
 Praising, encouragement only

Whole class activity

(Or individual work, monitored and reviewed with whole class)

T could have bags drawn or stuck on BB and labelled.

BB: A B C
 10 20 30

Cards shown in unison.

Agreement, checking, praising

BB: Probability of red

A B C
 1 in 10 1 in 20 1 in 30

Y3

Lesson Plan 153

Activity

6

PbY3b, page 153

Q.2 a) Read: *Toss a £1 coin and a £2 coin at the same time. Do this 15 times.*

i) *Keep a note of how each coin lands in this table. Total each row.*

T explains task. Ps have real or model coins and work in pairs, taking turns to toss the coins. Ps tick appropriate boxes in the table. Ps count the number of ticks in each row and write the totals in the *Pupil Total* column.

(Keep class together at each toss if Ps are unsure what to do.)

Elicit that the number of Heads and number of Tails for each coin should add up to 15. e.g.

		Tosses															Pupil Total	Class Total
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15		
£1	Head	✓			✓		✓			✓	✓				✓	✓	7	
	Tail		✓	✓		✓		✓	✓			✓	✓		✓		8	
£2	Head	✓		✓		✓				✓	✓		✓		✓	✓	8	
	Tail		✓		✓		✓	✓	✓			✓		✓			7	
Number of tosses																15		

Read: ii) *Collect and write the Class data in the right hand column.*

Ps dictate results to T who writes in similar class table on BB. Ps calculate the Class totals and write in RH column in *Pbs*. e.g. BB:

		Pairs' results															Class Total	
£1	Head	7	8	9	7	6	4	11	8	10	7	4	6					87
	Tail	8	7	6	8	9	11	4	7	5	8	11	9					93
£2	Head	8	8	7	8	5	9	9	8	7	8	10	7					94
	Tail	7	7	8	7	10	6	6	7	8	7	5	8					86
e.g. 12 pairs, 15 tosses, so 180 tosses																180		

What do you notice? (Number of Heads and Tails for each coin add up to number of tosses. Numbers are nearly equal.)

b) Read: i) *Write your own data in this table.*
ii) *Collect and write the Class data in the RH column.*

Ps complete own table, then dictate results to T who writes in a similar table on BB (or Ps come to BB). Ps work out Class totals together and T writes in RH column in table e.g.

£1	£2	Pairs' results															Class Total	
Head and Head		4	3	2	5	3	4	6	5	4	4	4	4					48
Head and Tail		3	4	5	4	4	2	3	4	3	4	3	3					42
Tail and Head		4	3	3	2	3	5	5	4	4	4	5	5					47
Tail and Tail		4	5	5	4	5	4	1	2	4	3	3	3					43
Number of tosses																180		

What do you notice? (All add up to number of tosses. Almost equal numbers for each – about 1 quarter of the total number of tosses.) Who can explain it?

(4 possible outcomes: HH, HT, TH and TT. The chance of each one happening is 1 chance out of 4, so we would expect the number of times we tossed, e.g. HH, to be about 1 quarter of the number of tosses. The same is true for HT, TH and TT.)

Notes

Paired work, monitored, helped

Tables drawn on BB or use enlarged copy master or OHP
Make sure that Ps know which side is Heads and which is Tails. Model coins could identify Heads/Tails with either a picture or initial letter. (If no £1 and £2 coins, use different colours of card coins.)

T could have copy of Ps' table on BB and do one toss and fill in one column as a model for Ps to follow.

Agreement, praising

(Sample data for a pair is shown.)

Whole class activity

Or 1 P from each pair comes to BB to fill in their column. At speed.

(Sample data are shown.)

Calculation done in *Ex. Bks* using addition or multiplication and addition

Agreement, checking, praising

Discussion, agreement, praising

Individual work, monitored, helped

Sample Pupil data:

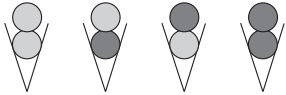

£1	£2	Pupil Total	Class Total
Head and Head		4	
Head and Tail		3	
Tail and Head		4	
Tail and Tail		4	
Number of tosses		15	

Ps fill in RH column in table in *Pbs* too.

Whole class discussion e.g. using sample data

BB: 1 quarter of 180 = 45

HH: 48 ≈ 45

Y3		<i>Lesson Plan 153</i>
Activity 6 Extension	b) (Continued) What is the probability of tossing 1 Head and 1 Tail on any coin? Ask several Ps what they think. Refer to Class data in table. (We would expect to toss a head and a tail 2 times (HT and TH) out of 4, so the probability is 2 in 4, or 2 quarters or 1 half.) e.g. using sample data: BB: 2 Heads: $48 \approx 45 = 1 \text{ quarter of } 180$ 1 Head + 1 Tail: $42 + 47 = 89 \approx 90 = 1 \text{ half of } 180$ 2 Tails: $43 \approx 45 = 1 \text{ quarter of } 180$ <p style="text-align: right;"><i>42 min</i></p>	Notes Whole class activity Discussion, agreement, demonstration, praising T repeats Ps explanations or suggestions in a clear way, checking that it is true for the class data. If we did the experiment lots more times, the data would be closer to what we expect!
7	PbY3b, page 153 Q.3 Read: <i>You asked for a 2-scoop ice-cream, saying 'Chocolate or strawberry please'. Colour the ice-creams to show what you could be given.</i> Review at BB with whole class. Ps come to BB to show their colouring. Who agrees? Who did it a different way? etc. Elicit that there are 4 possible outcomes: SS, SC, CS, CC. Discuss the importance of the word 'Or' as it allows a mixture of the two flavours, or all strawberry or all chocolate. How many different possibilities would there be if if we had asked for: <ul style="list-style-type: none"> • 2 chocolate scoops (1 case: CC) • a strawberry <u>and</u> a chocolate scoop (2 cases: SC, CS) • 2 strawberry scoops (1 case: SS) <p style="text-align: right;"><i>45 min</i></p>	Individual work, monitored, helped Drawn on BB or use enlarged copy master or OHP Discussion, agreement, self-correction, praising <i>Solution:</i>  SS SC CS CC Elicit that the probability of: 2C (2S) is 1 in 4 or 1 quarter 1C + 1S (in any order) is 2 in 4 or 2 quarters or 1 half

PbY3b, page 154

Q.1 Read: *Throw a dice 20 times. Keep a tally in the table. Write the total for each row.*

What can you see in the LH column of the table? (The 6 different faces of a dice, showing the numbers 1 to 6)

What is a tally? P comes to BB to explain: |||| means '5'.

Ps have dice on desks and work in pairs, taking turns to throw the dice. Ps keep a tally in *Pbs* and write the totals for each row in the *Pupil Total* column.

(Keep class together at each throw only if Ps are unsure.)

Ps check that the number of '1's, '2's, etc. add up to 20.

	Tally of 20 throws	Pupil Totals	Class Totals
1		3	
2		4	
3		3	
4		3	
5		2	
6		5	

(20)

Read: *Collect the class data and write them in the RH column.*

Ps come to BB to write their results in similar class table on BB.

Class calculates the totals together and T writes in RH column, e.g.

BB:

	Pair data														Class Totals	
1	3	2	3	4	4	3	3	4	4	3	3	5	4	1	4	50
2	4	3	3	2	3	4	4	3	2	4	5	3	4	3	3	50
3	3	3	3	2	4	4	1	3	3	4	4	3	5	4	3	49
4	3	3	4	4	2	3	4	3	3	4	3	3	4	5	4	52
5	2	4	3	4	3	3	4	5	3	3	2	3	2	5	5	51
6	5	5	4	4	4	3	4	2	5	2	3	3	1	2	1	48
e.g. 15 pairs, 20 throws each pair															Total number of throws	300

What do you notice? (Totals for '1', '2', etc. add up to the total number of throws [sample data: $15 \times 20 = 300$]; almost equal numbers for each – about 1 sixth of the total number of throws) Who can explain it?

(6 possible outcomes: 1, 2, 3, 4, 5 and 6. The chance of each one happening is 1 chance out of 6, so we would expect the number of times we threw, e.g. 3, to be about 1 sixth of the total number of throws. The same is true for each of the other numbers.)

T (or P) reads each question and Ps write answer in *Pbs*. Review with whole class. Ps explain reasoning. Class agrees/disagrees.

a) Read: *How many times would you expect to throw a 4 if you threw a dice:*

- i) 600 times (100 times, as $600 \div 6 = 100$)
- ii) 1200 times? (200 times, as $1200 \div 6 = 200$)

b) Read: *What would be the probability of throwing:*

- i) a 6 (1 out of 6 times, or 1 sixth)
- ii) at least 5 (2 out of 6 times, or 2 sixths = 1 third)
- iii) an even number? (3 out of 6 times, or 3 sixths = 1 half)

Notes

Paired work, monitored, helped

Tables drawn on BB or use enlarged copy masters or OHP

T could have copy of Ps' table on BB, throw the dice a few times and demonstrate how to fill in the table.

Agreement, praising

(Sample data for a pair is shown opposite.)

Whole class activity

Or Ps dictate results to T who writes in appropriate column.

At speed

Ps fill in RH column in table in *Pbs* too and calculate its total in *Ex. Bks*.

Agreement, praising

(Sample data for 15 pairs shown opposite.)

Whole class discussion

Involve several Ps.

e.g. using the sample data:

$$\text{BB: } 1 \text{ sixth of } 300 = 300 \div 6 = 50$$

Each of the totals = or ≈ 50

N.B. Actual class data might not be quite as close. Stress that the more times the dice is thrown, the closer the data will be to what is expected.

[A computer simulation would be very useful here.]

(Or answers can be shown on slates on command.)

'At least 5' means ≥ 5 , i.e. 5, 6

There are 3 even numbers: 2, 4, 6

Y3

Lesson Plan 154

Activity

5

PbY3b, page 154

Q.2 Read: *Throw two dice at the same time 36 times.*
Keep a tally in these tables.

Ps have two different coloured dice on desks (e.g. 1 red, 1 white)

Ps first colour the dice in the tables to match their own dice, e.g. LH dice red, RH dice left as white. What do you think the tables mean? Why do you think we have chosen the number of throws as 36? What are the possible results?

T explains if Ps do not have correct ideas. (LH columns show the possible numbers which can be thrown on the red dice (1–6); middle column shows the possible numbers which can be thrown on the white dice for every number thrown on the red dice, e.g. if a '1' is thrown on the red dice, the numbers 1, 2, 3, 4, 5 or 6 could be thrown on the white dice [as LH table]. Each of the 6 possible numbers on the red dice has its own table showing the 6 possible numbers which could be thrown on the white dice. i.e. 6 tables, each with 6 possible outcomes, so 36 different possible ways in which the two dice could land.)

Let's have a practice first! T throws 2 large dice (in same colours as Ps' dice). P comes out to see which numbers are facing up, finds the appropriate table and row and draws a tally mark. Repeat for more throws until Ps understand what to do.

Ps work in pairs, taking turns to throw the 2 dice, or both Ps have 2 dice and throw together, making 2 tally marks at a time (i.e. Ps throw 18 times each). Ps check that they have 36 tally marks, e.g.

1	1		2	1		3	1		4	1		5	1		6	1	
1	2		2	2		3	2		4	2		5	2		6	2	
1	3		2	3		3	3		4	3		5	3		6	3	
1	4		2	4		3	4		4	4		5	4		6	4	
1	5		2	5		3	5		4	5		5	5		6	5	
1	6		2	6		3	6		4	6		5	6		6	6	

Read: *Collect the Class data. Rub out your tally marks and write the Class data in the tables.*

T points to each row in turn. Ps stand up if they threw that combination of numbers and tell T their total. Ps keep a mental cumulative total (e.g. 1 + 2 + 0 + 3 + 0 + 2 + ... + 1 = 15)

Ps agree on total and T writes Class data in tables on BB. Ps rub out their tally marks in *Pbs* and replace with the Class data, e.g.

1	1	14	2	1	12	3	1	12	4	1	15	5	1	15	6	1	13
1	2	15	2	2	15	3	2	13	4	2	15	5	2	14	6	2	15
1	3	15	2	3	14	3	3	17	4	3	15	5	3	15	6	3	14
1	4	17	2	4	18	3	4	18	4	4	16	5	4	15	6	4	17
1	5	13	2	5	16	3	5	12	4	5	14	5	5	16	6	5	15
1	6	16	2	6	15	3	6	18	4	6	15	5	6	15	6	6	16

What do you notice? (About equal numbers each time) Why? (Each combination has an equal chance of being thrown, so we would expect each of them to be thrown 15 out of 540 times.)

[N.B. With the actual data, the number of expected times will be the same as the number of pairs of Ps.]

Notes

Whole class discussion to start
 Tables drawn on BB or use enlarged copy masters or OHP

Discussion involving several Ps.

Explanation, referring to tables on BB.

BB: $6 \times 6 = 36$ ways

Demonstration at BB first as a model for Ps to follow.

Paired work, monitored, helped

(Sample pair data shown opposite)

Agree that each combination has an equal chance of being thrown, so we would expect each to be thrown once out of 36 times. Why did it not happen? (Experiment not done enough times.)

Whole class collecting of class data. At a good pace.

Agreement, praising

(Sample Class data for 15 pairs are shown opposite.)

Total number of throws: e.g.
 $15 \times 36 = 10 \times 36 + 5 \times 36$
 $= 360 + 180 = 540$

Expected outcome of each:

36 throws \rightarrow 1 time
 15×36 throws \rightarrow 15 times

Agree that the more times the two dice are thrown, the closer the data will get to what is expected.

Y3

Lesson Plan 154

Activity

5

Q.2 (Continued)

Read: *Use the Class data to complete this table.*

Deal with one column at a time. T points to column in table, P comes to BB to show which rows have that sum and write the total in table. Which rows show the sum of both dice as:

- 1 (None, as it is impossible!)
- 2 (Only 1 row is possible: 1 + 1. Ps write value in table.)
- 3 (2 rows: 1 + 2 and 2 + 1. Ps write total in table.)
- ...
- 13 (None, as it is impossible)

BB: e.g. using values from sample data

Sum of both dice	1	2	3	4	5	6	7	8	9	10	11	12	13
Number of cases	—	14	27	42	59	78	92	73	61	48	30	16	—

Ways of making each sum:

1+1 1+2 1+3 1+4 1+5 1+6 2+6 3+6 4+6 5+6 6+6
 2+1 2+2 2+3 2+4 2+5 3+5 4+5 5+5 6+5
 3+1 3+2 3+3 3+4 4+4 5+4 6+4
 4+1 4+2 4+4 5+3 6+3
 5+1 5+2 6+2
 6+1
 [1] [2] [3] [4] [5] [6] [5] [4] [3] [2] [1]

What do you notice? (Not all the same: The more ways there are of making the sum, the more times it happened; numbers are almost symmetrical on either side of '7'; etc.)

[A computer simulation for 100 (1000) times would be very good T could show to class in *Lesson 155*.]

40 min

Notes

Whole class activity
Table drawn on BB or use enlarged copy master or OHP
At a good pace

(e.g. in sample data:
14 times out of 540 throws
15 + 12 = 27 times out of 540 throws

Additions written on BB.
T can check with a calculator.

Discuss what outcomes would be expected for each sum e.g.

'2': 36 throws → 1 time
15 × 36 throws → 15 times
'5': 36 throws → 4 times
15 × 36 throws → 60 times
'7': 36 throws → 6 times
15 × 36 throws → 90 times

Agree that the more throws, the closer the data will get to expected data.

6

PbY3b, page 154

Q.3 Read: *How could a 3-scoop ice-cream be made from vanilla or strawberry or lemon?*

T tells class that the scoops can be in any position. Elicit that the use of the word OR means that they can be mixed or all the same flavour.)

Review at BB with whole class. Ps come to BB to show their colouring. Who agrees? Who did it a different way? etc.

Solution:

Elicit that there are 10 possible outcomes:

VVV VSS SSS LLL
VVS VSL SSL
VVL VLL SLL

What chance would there be of being given a cone containing

- 3 different flavours? (1 chance out of 10 or 1 tenth)
- all the same flavour? (3 chances out of 10 or 3 tenths)

45 min

Individual work, monitored, helped
Drawn on BB or use enlarged copy master or OHP

Discussion, agreement, self-correction, praising

Different Ps show different ways of colouring.

T writes possibilities in logical order on BB.

Whole class activity
Agreement, praising
Ps can think of questions too!

Y3

R: Calculation
C: Roman numerals
E: Puzzles

Lesson Plan
157

Activity

1

Missing numbers

Which numbers are missing from the boxes?

Ps come to BB to write them in, explaining reasoning. Difficult calculations can be written at side of BB. Class points out errors.

BB:

$$1872 \div 2 \rightarrow \boxed{936} \div 3 \rightarrow \boxed{312} \div 4 \rightarrow \boxed{78} \div 6 \rightarrow \boxed{13}$$

$$1872 \div 3 \rightarrow \boxed{624} \div 4 \rightarrow \boxed{156} \div 6 \rightarrow \boxed{26} \div 2 \rightarrow \boxed{13}$$

$$1872 \div 4 \rightarrow \boxed{468} \div 6 \rightarrow \boxed{78} \div 2 \rightarrow \boxed{39} \div 3 \rightarrow \boxed{13}$$

$$1872 \div 6 \rightarrow \boxed{312} \div 2 \rightarrow \boxed{156} \div 3 \rightarrow \boxed{52} \div 4 \rightarrow \boxed{13}$$

What do you notice? (The dividend, divisors and final quotient are the same in all cases, so the order of divisions does not matter; dividing by 2 and then by 3 is the same as dividing by 6, etc.)

6 min

Notes

Whole class activity

Drawn on BB or use enlarged copy master or OHP

Ps could calculate in *Ex. Bks* (or on scrap paper or slates) first before coming to BB if they wish.

Reasoning, agreement, praising

Details written on BB: e.g.

		4	6	8							
4	1	8	7	2		6	1	8	7	2	
-	1	6				-	1	8			
		2	7					0	7		
		-	2	4				-	6		
			3	2					1	2	
			-	3	2				-	1	2
											0
											0

2

Problems

Listen carefully, picture the story in your head and show me the plan you would write to solve it. If you have time, work out the answer too.

T reads problem. Ps write a plan and show on command. Who had time to work it out? Come and show us. Who agrees? etc.

a) *Linda had £936 in her bank account. After she had spent the day shopping, she had only 1 sixth of her money left.*

i) *How much did she have left?*

BB: Had: £936 Had left: 1 sixth of £936 = $\frac{£936}{6}$
= £156

ii) *How much did she spend?*

BB: Spent: $£936 - £156 = £780$ (or $£156 \times 5 = £780$)

Answer: Linda spent £780 and had £156 left.

b) *A tube 10 m 24 cm long was cut into 4 equal pieces. What was the length of each piece?*

BB: Length of tube: 10 m 24 cm = 1024 cm

Each piece: 1 quarter of 1024 cm = $\frac{1024 \text{ cm}}{4}$
= 256 cm = 2 m 56 cm

Answer: Each piece had length 2 m 56 cm.

c) *Ann made up 5 litres 40 cl of orange squash. How many 5 cl glasses could she fill with the orange squash?*

BB: Made: 5 litres 40 cl = 540 cl Each glass: 5 cl

Number of glasses: $\frac{540 \text{ cl}}{5 \text{ cl}} = 108$

Answer: Ann could fill 108 glasses with orange squash.

d) *A baker made 5 kg 200 g of bread dough. How many rolls could the baker make if he used 80 g of dough for each roll?*

BB: Made: 5 kg 200 g = 5200 g Each roll: 80 g

Number of rolls: $\frac{5200 \text{ g}}{80 \text{ g}} = 520 \text{ g} \div 8 \text{ g} = 65$

Answer: The baker could make 65 rolls.

Individual work in writing the plan, but whole class calculating and expressing the answer.

Plans written on scrap paper or slates and shown in unison on command.

(Accept plans, shown underlined, without units but make sure that Ps know what the units should be.)

At a good pace

Reasoning, agreement, praising

R: Calculation
 C: Money problems
 E: Negative balance

Lesson Plan 158

Activity

1

Mental practice

Listen carefully and try to do the calculation in your head if you can. T asks Ps at random. Class points out errors. If problems, details of calculation written on BB.

a) How many £2 coins would I get for:
 £68 (34), £126 (63), £448 (224), £314 (157), £723 (361 but £1 is left unchanged), etc.

How do we know whether a number is exactly divisible by 2? (If it is even) What possible remainder can there be if it is odd? (1)

b) How many £5 notes would I get for:
 £75 (15), £120 (24), £545 (109), £380 (76), £733 (146 but £3 is left unchanged), etc.

How do we know whether a number is exactly divisible by 5? (If it has 5 or 0 in its units column) What possible remainder can there be if it does not have 5 or 0 in the units column? (0, 1, 2, 3, 4)

8 min

Notes

Whole class activity

Feedback for T

2

Money

a) How much money is in the purses altogether?

A, come and show us how you would do it. Who agrees? Who would do it another way? etc. Ps explain reasoning and write calculations in different ways on BB. e.g.

BB:

	1	2		
	2	4	8	
	2	4	8	
+	2	4	8	
	7	4	4	

2	4	8	×	3	
	2	4			
1	2	0			
6	0	0			
7	4	4			

2	4	8	×	3	
7	4	4			
	1	2			

b) How much money is in the piggy banks altogether?

B, come and show us how you would do it. Who agrees? Who would do it another way? etc. Ps explain reasoning and write calculations in different ways on BB. e.g.

BB:

	3	3		
	1	7	9	
	1	7	9	
	1	7	9	
+	1	7	9	
	7	1	6	

1	7	9	×	4	
	3	6			
2	8	0			
4	0	0			
7	1	6			

1	7	9	×	4	
7	1	6

Problems

Listen carefully, picture the story in your head and show me the plan you would write to solve it. If you have time, work out the answer too.

T reads problem. Ps write a plan and show on command. Who had time to work it out? Ps come to BB or dictate to T. Who agrees? etc.

- a) *Paul bought a matchbox car for £3.96 and 4 tennis balls at £1.98 each. How much did he spend altogether?*

$$\begin{aligned} \text{BB: Spent: } & \underline{\pounds 3.96 + 4 \times \pounds 1.98} = 396 \text{ p} + 4 \times 198 \text{ p} \\ & = 396 \text{ p} + 792 \text{ p} \\ & = 1188 \text{ p} = \underline{\pounds 11.88} \end{aligned}$$

Answer: Paul spent £11.88 altogether.

- b) *Joe's Granny went shopping with £15 in her purse. She bought 6 kg of gooseberries at £1.46 per kilogram. How much money did she have left?*

$$\begin{aligned} \text{BB: Had left: } & \underline{\pounds 15 - 6 \times \pounds 1.46} = 1500 \text{ p} - 6 \times 146 \text{ p} \\ & = 1500 \text{ p} - 876 \text{ p} \\ & = 624 \text{ p} = \underline{\pounds 6.24} \end{aligned}$$

Answer: She had £6.24 left.

- c) *In the market 1 kg of strawberries cost £2.75 but in the fruit shop they cost £3.88 per kilogram.*

If you wanted to buy 4 kg strawberries, how much more would they cost in the fruit shop than in the market?

$$\begin{aligned} \text{BB: Difference: } & \underline{(\pounds 3.88 - \pounds 2.75) \times 4} = (388 \text{ p} - 275 \text{ p}) \times 4 \\ & = 113 \text{ p} \times 4 \\ & = 452 \text{ p} = \underline{\pounds 4.52} \end{aligned}$$

$$\begin{aligned} \text{Or } & \underline{\pounds 3.88 \times 4 - \pounds 2.75 \times 4} = 388 \text{ p} \times 4 - 275 \text{ p} \times 4 \\ & = 1552 \text{ p} - 1100 \text{ p} \\ & = 452 \text{ p} = \underline{\pounds 4.52} \end{aligned}$$

Answer: They would cost £4.52 more in the fruit shop.

20 min

Notes

Individual work in writing the plan, but whole class calculating and expressing the answer.

Plans written on scrap paper or slates and shown in unison on command.

Reasoning, agreement, praising

Details of calculations : e.g.

a)

1	9	8	×	4			
7	9	2					
3	3						

	7	9	2	
+	3	9	6	
	1	1	8	8

b)

1	4	6	×	6			
8	7	6					
2	3						

1	5	0	0
-	8	7	6
	6	2	4

c) Can be done in two ways:

	3	8	8
-	2	7	5
	1	1	3

1	1	3	×	4
4	5	2		
		1		

or

	3	8	8	×	4
1	5	5	2		
		3	3		

	2	7	5	×	4
1	1	0	0		
		3	2		

	1	5	5	2
-	1	1	0	0
		4	5	2

Individual work, monitored, helped

If Ps are less able, deal with one part of the solution at a time. (Ps write a plan, then whole class discussion; then Ps do calculation and check, then whole class discussion, then Ps write answer in a sentence, then review.)

Vertical calculations can be done on grid sheets or in Ex. Bks, or Ps use horizontal calculations, e.g.

$$\begin{aligned} 648 \div 6 & = 600 \div 6 + 48 \div 6 \\ & = 100 + 8 = \underline{108} \end{aligned}$$

4

PbY3b, page 158

- Q.1 Read: *Make a plan. Do the calculation, check it and write the answer in a sentence.*

Deal with one question at a time. Ps read problem themselves, and solve it. Review at BB with whole class after completion. Ps explain reasoning and show calculation and check. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

- a) *Tim has £648, 6 times the amount Laura has. How much does Laura have?*

Plan: Laura: £648 ÷ 6 Calculation:

Check:

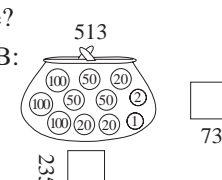

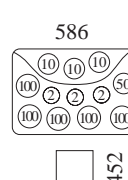

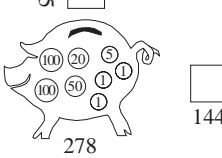

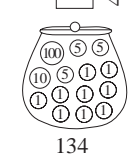

1	0	8	×	6		
6	4	8				

Answer:

✓ Laura has £108.

	1	0	8
6	6	4	8
-	6		
	0	4	8
	-	4	8

Y3

Lesson Plan 159

Activity

6

(Continued)

Q.3 b) *Andrea has £6.42. She bought some flowers for £2.35. The money she has left is 1 third of the money her sister has. How much does her sister have?*

BB: A: £6.42 – £2.35 S: A × 3
 S: (£6.42 – £2.35) × 3 = £4.07 × 3 = **£12.21**

Answer: Andrea's sister has £12.21.

c) *Eve had £5.64. She bought some sweets with 1 quarter of her money. How much did she have left?*

BB: Had: £5.64 Spent: £5.64 ÷ 4
 Had left: £5.64 – £5.64 ÷ 4 = £5.64 – £1.41 = **£4.23**
 or £5.64 ÷ 4 × 3 = £1.41 × 3 = **£4.23**

Answer: Eve had £4.23 left.

38 min

Notes

Details: e.g.

$$\begin{array}{r} 642 \\ - 235 \\ \hline 407 \end{array} \quad \begin{array}{r} 407 \times 3 \\ 1221 \end{array}$$

Accept any correct method of calculation, e.g.

$$\begin{array}{r} 141 \\ 4564 \\ - 4 \\ \hline 16 \\ - 16 \\ \hline 04 \\ - 4 \\ \hline 0 \end{array} \quad \begin{array}{r} 564 \\ 141 \\ 423 \\ \hline \end{array} \quad \text{or} \quad \begin{array}{r} 141 \times 3 \\ 423 \\ 1 \end{array}$$

7

PbY3b, page 159

Q.4 Read: *What is the price of 7 tickets if 4 tickets cost £9.24?*

Review at BB with whole class. Mistakes corrected. Agree that the number of tickets and the price are in direction proportion to one another

Solution:

4 tickets cost: £9.24
 1 ticket costs: £9.24 ÷ 4 = £2.31
 7 tickets cost: £2.31 × 7
 = **£16.17**

$$\begin{array}{r} 231 \\ 4924 \\ - 8 \\ \hline 12 \\ - 12 \\ \hline 04 \\ - 4 \\ \hline 0 \end{array} \quad \begin{array}{r} 231 \times 7 \\ 1617 \end{array} \quad \text{or 3 tickets:} \quad \begin{array}{r} 924 \\ + 693 \\ \hline 1617 \end{array}$$

41 min

Individual work, monitored, helped

Ps could show results on scrap paper or slates on command.

Reasoning, agreement, self-correction, praising

BB: £9.24 = 924 p
 1617 p = £16.17

8

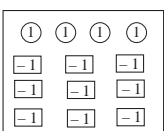

PbY3b, page 159, Q.5

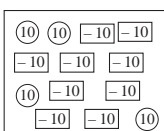

Read: *Calculate the balance.*

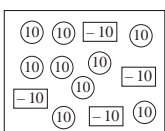

How can we solve it? T asks several Ps what they think. (e.g. count the positive amounts, then the negative amounts, and subtract them, or pair up positive and negative amounts on a one-to-one basis and see what is left over.) What do you think is the easiest method?

Ps come to BB to explain reasoning and to write the balance. Class agrees/disagrees. Ps write balance in in *Pbs* too.

Solution:

a)  **- 5**
 (4 × 1 + 9 × -1)
 (+ 4 and - 9)

b)  **- 50**
 (4 × 10 + 9 × -10)
 (+ 40 and - 90)

c)  **50**
 (9 × 10 + 4 × -10)
 (+ 90 and - 40)

45 min

Whole class activity (or individual work, one at a time if Ps wish)

Drawn on BB or use enlarged copy master or OHP

Discussion on strategy for solution.

Reasoning, agreement, praising

Refer to class number line. Remind Ps that positive numbers are greater than zero (to right of 0 on number line) and negative numbers are less than zero (left of 0 on number line) and that positive numbers are usually written without the '+' sign in front of them, i.e. +6 = 6

Y3

Lesson Plan 160

Activity

Notes

Tables practice, revision, activities, consolidation

PbY3b, page 160

Solutions:

Q.1 *Plan:* $(£8.70 + £10.35) \div (2 + 3)$

Calculation: $= £19.05 \div 5$
 $= \underline{£3.81}$

Check: $5 \times £3.81 = £19.05$

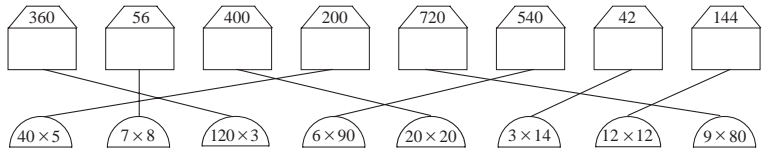

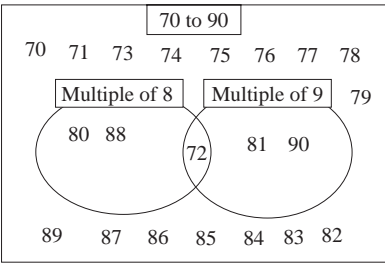

Answer: Each sister or cousin paid £3.81 each.

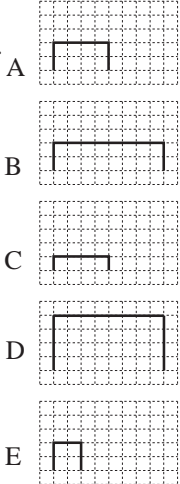

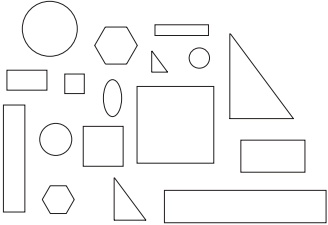

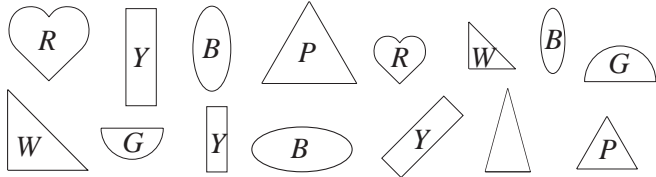

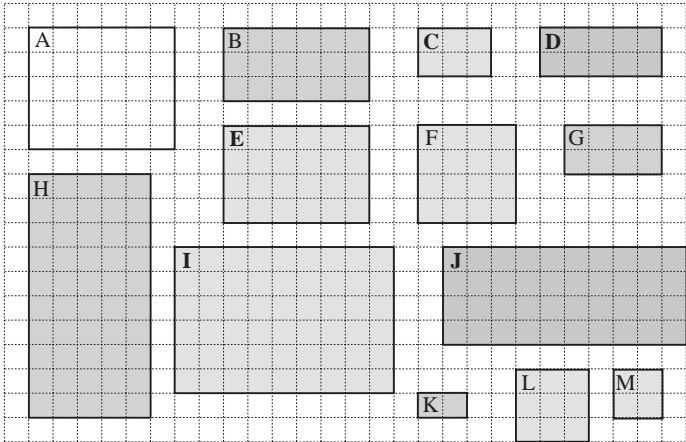

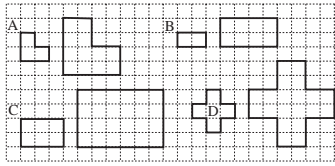

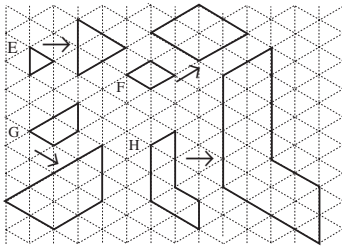

Q.4 e.g.

Q.5 MCL, MC, ML, (M, CML, CM, DCCCL, DCCC, ...)

<h1>Y3</h1>	<p>R: Mental and written calculation C: Revision: Enlargement, reduction E: <i>Puzzles</i></p>	<h2>Lesson Plan 161</h2>									
<p>Activity 1</p>	<p>Equal values</p> <p>Let's match up the mouseholes to the houses. Ps come to BB to draw joining lines (or stick mouseholes inside appropriate houses) saying the whole equation. (e.g. '120 times 3 equals 360') Class agrees/disagrees.</p> <p>BB:</p>  <p style="text-align: center;">5 min</p>	<p>Notes</p> <p>Whole class activity</p> <p>Drawn on BB or use enlarged copy master or OHP, or items cut out and stuck to BB</p> <p>At a good pace</p> <p>Agreement, praising</p> <p>Feedback for T</p>									
<p>2</p>	<p>Boom!</p> <p>Let's count down from 91 and say 'boom' instead of the numbers which are divisible by 3.</p> <p>'91, Boom, 89, 88, Boom, 86, 85, Boom, 83, 82, Boom, 80, ...</p> <p>T advises Ps to break down 'difficult' numbers into smaller bonds, e.g. $87 = 60 + 27$, if they are unsure whether it is a multiple of 3.</p> <p style="text-align: center;">8 min</p>	<p>Whole class activity</p> <p>At speed in order round class.</p> <p>If a P makes a mistake, next P corrects it.</p> <p>In good humour!</p> <p>Praising, encouragement only</p>									
<p>3</p>	<p>Sets</p> <p>Let's write the whole numbers from 70 to 90 in the set diagram.</p> <p>BB:</p> <p>Ps come to BB to write numbers in order in correct set, explaining reasoning. Class agrees/disagrees.</p>  <p style="text-align: center;">13 min</p>	<p>Whole class activity</p> <p>Use enlarged copy master or OHP</p> <p>At a good pace</p> <p>Reasoning, agreement, praising</p> <p>Feedback for T</p>									
<p>4</p>	<p>Magic square</p> <p>This is a <u>magic square</u>. Who remembers what its rules are? (The sums of each row, column and diagonal are the same.)</p> <p>What is the 'magic sum'? T asks several Ps what they think. P comes to BB to explain how he/she deduced it from completed column.</p> <p>(BB: $230 + 270 + 310 = 810$)</p> <p>Where should we go next? (e.g. 2nd row as only one number missing)</p> <p>Ps come out to fill in missing number, explaining reasoning. Class checks that they are correct. Continue in similar way until complete.</p> <p>If Ps wish, let them try it themselves first in <i>Ex. Bks.</i> When they have found a row or column, they come to BB to show it and class checks that they are correct. Calculations done at side of BB if necessary.</p> <p style="text-align: center;">17 min</p>	<p>Whole class activity</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Ps have copy of copy master or draw and write in <i>Ex. Bks.</i></p> <p>BB <u>Magic square</u></p> <table border="1" data-bbox="1203 1711 1370 1879"> <tr> <td>300</td> <td>230</td> <td>280</td> </tr> <tr> <td>250</td> <td>270</td> <td>290</td> </tr> <tr> <td>260</td> <td>310</td> <td>240</td> </tr> </table> <p>Reasoning, checking, agreement, praising</p>	300	230	280	250	270	290	260	310	240
300	230	280									
250	270	290									
260	310	240									

<p>Y3</p>		<p><i>Lesson Plan 161</i></p>
<p>Activity</p> <p>5</p>	<p>Construction</p> <p>Let's draw a table according to my instructions. T reads instructions and a P comes out to draw on BB or OHP while Ps draw on square grid or in <i>Ex. Bks</i> (using rulers).</p> <p>a) Draw a table with height 2 units and width 4 units. Label it A.</p> <p>b) Now draw a table which is the same height as A but twice the width. Label it B.</p> <p>c) Now draw a table which is the same width as A but half its height. Label it C.</p> <p>d) Now draw a table which is twice the height and twice the width of A. Label it D.</p> <p>e) Now draw a table which is the same height as A but half the width. Label it E.</p>  <p>Which tables are <u>similar</u>? Who remembers how to write it?</p> <p style="text-align: right;"><i>21 min</i></p>	<p>Notes</p> <p>Individual work, monitored, helped but class kept together.</p> <p>Use BB with square grid or grid on copy master or OHP</p> <p>T repeats each instruction slowly while walking round class.</p> <p>Class points out any errors made by Ps working at BB.</p> <p>Agreement, correction, praising</p> <p>BB: <u>Similar</u> shapes: $A \sim D$ $B \sim C$</p> <p>(same shape, same or different size)</p>
<p>6</p>	<p>Similar shapes</p> <p>T has various shapes stuck to BB. Which of these shapes are similar? Ps come to BB to choose similar shapes. Class agrees/disagrees.</p> <p>e.g. BB:</p>  <p>Ps say the names of the groups of shapes.</p> <p>Agree that only the ellipse (or oval) does not have a similar shape.</p> <p style="text-align: right;"><i>25 min</i></p>	<p>Whole class activity</p> <p>Use copy master, with shapes enlarged onto coloured paper, cut out and stuck to BB at random</p> <p>At a good pace</p> <p>Point out the two different kinds of rectangles.</p> <p>Agreement, praising</p>
<p>7</p>	<p>PbY3b, page 161</p> <p>Q.1 Read: <i>Colour similar shapes in the same colour.</i></p> <p>Review at BB with whole class. Ps come to BB to colour shapes (or write initial letter of colour to save time).</p> <p>Class agrees/disagrees. Mistakes corrected. (Only one triangle remains uncoloured because it does not have a similar shape.)</p> <p><i>Solution:</i></p>  <p style="text-align: right;"><i>30 min</i></p>	<p>Individual work, monitored, helped</p> <p>Use enlarged copy master or OHP, or shapes enlarged onto coloured paper, cut out and stuck to BB</p> <p>Discussion, agreement, self-correction, praising</p> <p>Feedback for T</p>

<h1>Y3</h1>		<p><i>Lesson Plan 161</i></p>
<p>Activity</p> <p>8</p>	<p>PbY3b, page 161</p> <p>Q.2 Read: <i>Colour similar rectangles in the same colour.</i></p> <p>Some of these rectangles look similar. How can we make <u>sure</u> that they are similar? (Count the units along each side.) Elicit that there are rectangles with sides in the ratio of: 1:1 (squares), 2:1, 3:2, etc.</p> <p>Review at BB with whole class. Ps come to BB or dictate to T who writes similarities on BB. Class agrees/disagrees. Mistakes corrected. Agree that only <i>Shape A</i> does not have a similar shape. Who could draw one? P comes to BB. Class decides whether or not it is similar.</p> <p><i>Solution:</i></p>  <p style="text-align: right;">36 min</p>	<p>Notes</p> <p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Initial discussion to draw Ps' attention to the different ratio of lengths of sides.</p> <p>Discussion, agreement, self-correction, praising</p> <p>BB:</p> <p>B ~ G ~ H ~ K (2:1) C ~ E ~ I (3:2) D ~ J (5:2) F ~ L ~ M (1:1)</p> <p>Extension</p> <p>Ps calculate the perimeter and area of each rectangle.</p> <p>e.g.</p> <p>K: $P = (2 + 1 + 2 + 1)$ units $= 6$ units</p> <p>A = (2×1) unit squares $= 2$ unit squares</p>
<p>9</p>	<p>PbY3b, page 161</p> <p>Q.3 Read: <i>Enlarge each shape to twice its size.</i></p> <p>Ps could have copies of copy master on desks if diagrams in <i>Pbs</i> are too small. Agree that each side of a shape should be twice as long. Deal with one part at a time.</p> <p>Review at BB with whole class. Ps show their solutions on BB. Class checks that they are correct.</p> <p><i>Solution:</i></p> <p>a) </p> <p>b) </p> <p style="text-align: right;">42 min</p>	<p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Discussion, agreement, self-correction, praising</p> <p>Extension</p> <p>T points to some shapes and Ps say the perimeter and area (part a) in unit squares and part b) in unit triangles)</p> <p>Class agrees/disagrees. Praising</p>
<p>10</p>	<p>PbY3b, page 161</p> <p>Q.4 Read: <i>Lengthen this line to 3 times its length.</i></p> <p>What is the length of the line in your <i>Pbs</i>? (Ps measure in cm) Agree that it is 5 cm long. Ps lengthen it as instructed and write its total length in cm below the line. Agree that it should be 3×5 cm = 15 cm long. How many mm is 15 cm? (150 mm) What fraction of the new line is the original line? (1 third)</p> <p style="text-align: right;">45 min</p>	<p><i>Ps have cm rulers on desks.</i></p> <p>Individual work, monitored</p> <p>Agreement, self-correcting, praising</p>

Y3

R: Mental and written calculation
 C: **Revision: enlargement, reduction. Plans and maps**
 E: *Problems and puzzles*

Lesson Plan 162

Activity

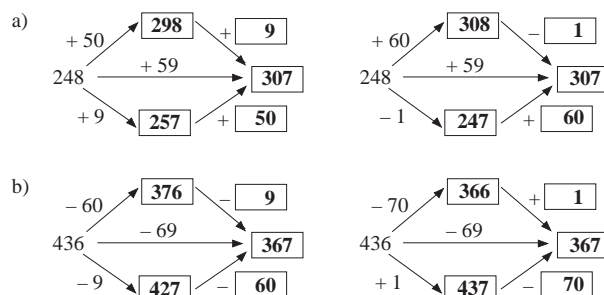

1

Missing numbers

Study the diagrams. Think about what is happening. Ps do the calculations mentally or in *Ex. Bks.*

Ps come to BB to fill in missing numbers, explaining reasoning. Class agrees/disagrees. Which method do you think is easier? Why?

BB:

5 min

Notes

Whole class activity

Drawn on BB or use enlarged copy master or OHP

Reasoning, agreement, praising

Details of calculations: e.g.

a)

	1	1	
	2	4	8
+		5	9
	3	0	7

b)

	4	¹⁰ 3	¹⁰ 6
-	₁	6	9
	3	6	7

2

Multiplication and division tables

Ps stand. They have multiplication squares on desks in case they need it. T says a multiplication or division. Ps say product or quotient. If a P answers correctly he/she sits down but if not, next P corrects it.

T notes which facts certain Ps do not know and keeps coming back to ask them again. T asks Ps to note unknown facts too and to learn them by heart. (T could ask them at any time during the school day!)

10 min

Whole class activity

At speed. T calls Ps in order or at random.

Praising, encouragement only
 In good humour!

T notes which Ps need to use their multiplication tables.

3

Comparison

Which side is more? How many more? Ps come to BB to work out LHS and RHS, explaining reasoning in detail, then to write in the missing sign and how many more. Class checks that they are correct.

BB:

a) $60 \div 10 \begin{cases} < \\ > \\ = \end{cases} 5 \times 13$ b) $180 \div 2 \begin{cases} < \\ > \\ = \end{cases} 7 \times 11$
 c) $140 \div 7 \begin{cases} < \\ > \\ = \end{cases} 100 - 6 \times 12$ d) $1000 \div 4 \begin{cases} < \\ > \\ = \end{cases} 13 \times 3 + 211$
(28) (250)

T chooses Ps to read the completed statements (or class reads in unison).

15 min

Whole class activity

Ps do calculations in *Ex. Bks* if they wish (or at side of BB)

Reasoning, agreement, praising. Details, e.g.

a)

1	3	×	5
6	5		

 d)

		2	5	0
4	1	0	0	0
-		8		
		2	0	
-		2	0	
			0	0

4

Sorting numbers

Barry Bear is collecting numbers divisible by 7. Flossie Rabbit is collecting the multiples of 4. Let's help them by writing the numbers from 10 to 40 in the correct set.

BB:

Ps come to BB to write numbers.

Class points out errors.

Agree that numbers belonging to neither set should be written outside.

Discuss the number 28, which belongs in both sets.

Who should have it? What can we do to prevent a quarrel?

(Write 28 in both sets.) In what other way could we show it? (Draw a Venn diagram.) Allow Ps to draw it if they can (with T's help).

Whole class activity

Drawn on BB or use enlarged copy master or OHP

At speed

Agreement, praising

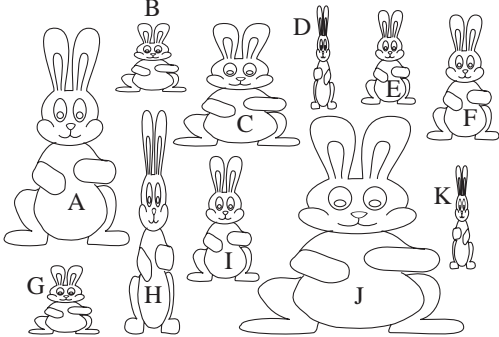

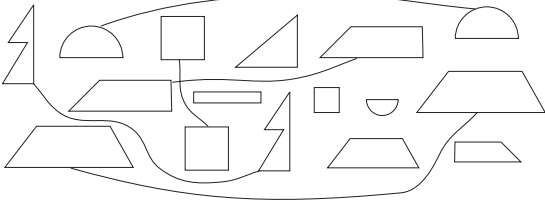

Discussion, agreement

BB: Venn diagram e.g.

Praising, encouragement only!

20 min

<p>Y3</p>		<p><i>Lesson Plan 162</i></p>
<p>Activity 5</p>	<p>Similarity and congruence T has pictures of different forms and sizes stuck on BB. e.g. BB:</p>  <ul style="list-style-type: none"> • Which are <u>similar</u>? (i.e. have the same shape but are the same or a different size). Ps come to BB to point. Class agrees/disagrees. How can we write it mathematically? Ps write with T's help. • Which are exactly the same? Ps come to BB to point. Class agrees/disagrees. What do we call shapes which are exactly the same as each other? (<u>congruent</u>) Who remembers how we can write it mathematically? T shows if nobody remembers. <p>Agree that congruent shapes are also similar to each other but similar shapes are not necessarily congruent.</p> <p style="text-align: right;">26 min</p>	<p>Notes</p> <p>Whole class activity Use enlarged copy master or OHP, or any other suitable pictures. Ask Ps to describe the pictures and elicit that there are 3 different forms. Encourage them to use mathematical terms, e.g. A is an enlargement of I. K is a reduction of H. H has been stretched vertically. G has been stretched horizontally.</p> <p>BB: <u>Similar shapes</u> D ~ H ~ K A ~ E ~ F ~ I B ~ C ~ G ~ J</p> <p><u>Congruent shapes</u> D ≅ K F ≅ I B ≅ G</p> <p>Agreement, praising</p>
<p>6</p> <p><i>PbY3b, page 162</i> Q.1 Read: <i>Join up the shapes which are congruent.</i> Review at BB with whole class. Ps come to BB to draw joining lines. Class agrees/disagrees. Mistakes corrected. T points to a shape and Ps say its mathematical name. (square, rectangle, quadrilateral, triangle, semi-circle, pentagon) <i>Solution:</i></p>  <p>Extension Who can point to parallel lines (perpendicular lines, right angles)? Who remembers how we show them? BB: </p> <p style="text-align: right;">30 min</p>		<p>Individual work, monitored helped Drawn on BB or use enlarged copy master or OHP Discussion, agreement, self-correction, praising (Or Ps point to shapes and say the names they know.) How can we check that two shapes are congruent? (Cut one out or trace over one and see if it covers the other <u>exactly</u>.) T demonstrates with pairs of prepared shapes from this (or previous) question. Agreement, praising</p>
<p>7</p> <p><i>PbY3b, page 162</i> Q.2 Read: <i>This is a plan of a school. Measure each side of the rectangles in the plan.</i> T explains the plan, indicating the 4 rectangles (<i>Rectangle 1</i> being the whole site) and elicits the meaning of the scale. Do you think we need to measure each side of every rectangle? (No, we only need to measure a long and a short side, as opposite sides are equal.) Let's say that the length is the long side and the width is the short side of a rectangle. What unit should we use to measure? (mm)</p>		<p><i>Ps have cm rulers on desks.</i> Individual work, monitored, helped Drawn on BB or use enlarged copy master or OHP for demonstration only Initial discussion about plan BB: <u>Scale:</u> 1 mm → 1 m on map in real life</p>

Y3

Lesson Plan 162

Activity

7

(Continued)

Deal with one rectangle at a time. T shows it on plan on BB and Ps measure the length and width and write it on their plans. Ps dictate to T what to write on plan on BB.

Read: *Calculate the lengths in real life. Write both sets of data in the table.*

Ps come to BB to fill in a column in the table on BB. Class agrees/disagrees. Ps write data in tables in *Pbs* at same time.

Agree that calculation is not necessary as the numerical value is the same – only the unit changes!

Solution:

Rectangle	①	②	③	④	⑤
On plan: Length (mm)	136	50	27	30	47
Width (mm)	47	20	18	22	36
In real life: Length (m)	136	50	27	30	47
Width (m)	47	20	18	22	36

40 min

Notes

Individual work, monitored

Keep class together for each rectangle if Ps are unsure.

Agreement, self-correcting, praising

At a good pace

BB: e.g. 10 mm → 10 m
100 mm → 100 m

Extensions

1. Ps calculate the real perimeter and area of some of the rectangles. e.g.

$$P3 = (18\text{ m} + 27\text{ m}) \times 2 = 45\text{ m} \times 2 = \underline{90\text{ m}}$$

$$A4 = 22\text{ m} \times 30\text{ m} = 660\text{ square metres (or } 600\text{ m}^2)$$

2. How far are the playing fields from the sports hall?

$$100\text{ m} - (18\text{ m} + 22\text{ m}) = 100\text{ m} - 40\text{ m} = \underline{60\text{ m}}$$

Or Ps can think of questions!

8

PbY3b, page 162

Q.3 Read: *This is an enlarged drawing of Flea's briefcase. Measure its sides, then calculate what they would be in real life. Write both sets of data in the table.*

Ps write lengths on diagram. Review with whole class. Mistakes corrected.

Ps fill in table. Review at BB with whole class. Ps dictate results or come to BB. Mistakes discussed and corrected.

Elicit that 1 tenth of a cm is 1 mm. Ps convert real life lengths to mm.

Solution:

On plan: Length (cm)	5
Height (cm)	3
In real life: Length (cm)	5 tenths (= 5 mm)
Height (cm)	3 tenths (= 3 mm)

Compare the scales in this and in previous question. (The school's plan was drawn to a smaller scale and *Flea's* plan was drawn to a larger scale so that we could see and cope with them more easily.)

45 min

Individual work, monitored, helped

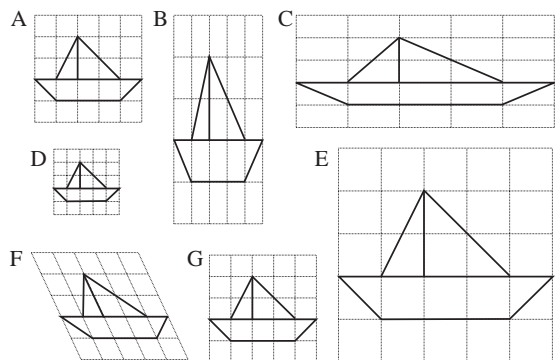

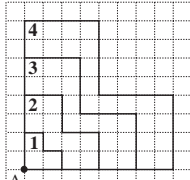

Drawn on BB or use enlarged copy master or OHP for demonstration only

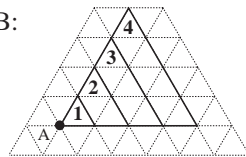

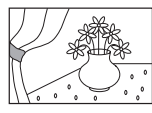

Discussion, agreement, self-correction, praising

[Extension – for very able Ps
Flea's umbrella fits diagonally in his case. What length could it be in real life? (5.8 mm)]

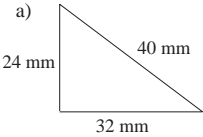

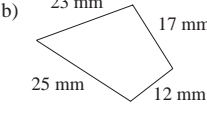

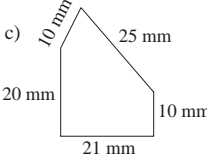

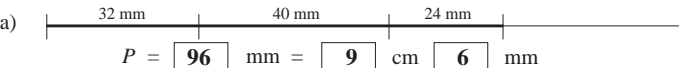

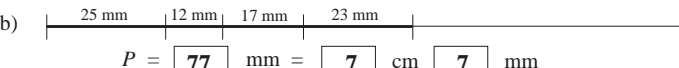

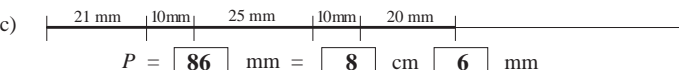

Whole class discussion on reasons for using larger and smaller scales.

<h1>Y3</h1>	<p>R: Mental and written calculation C: Revision: similarity, enlargement, reduction (perimeter, area) E: <i>Problems, puzzles</i></p>	<h2 style="text-align: center;">Lesson Plan 163</h2>

Lesson Plan 164

Activity

6

Pby3b, page 164

Q.2 Read: *Count how many of the given units are in the perimeter and area of each shape.*

T explains task. Elicit that *P* means perimeter and *A* means area. Deal with one part at a time only if Ps are unsure.

Review at BB with whole class. Ps dictate to T or come to write on BB. Class agrees/disagrees. Mistakes discussed and corrected

Solution:

What do you notice about the shapes? What connections can you see? e.g.

- The first 3 shapes are congruent (same form and equal size)
- All 4 shapes have the same perimeter length, but have been measured in different sizes of unit, e.g.
using a unit half the size → 2 times as many needed
using a unit 1 quarter the size → 4 times as many needed.
- The first 3 shapes cover the same area, but have been measured with different sizes of unit squares, e.g.
using a unit 1 quarter of the size → 4 times as many needed
using a unit 1 sixteenth of the size → 16 times as many needed.
- Shapes c) and d) have been measured using the same units. They have equal perimeters but c) has a larger area.

Notes

Individual work, monitored, helped
Drawn on BB or use enlarged copy master or OHP
Agreement, self-correction, praising

Whole class discussion
Involve several Ps
Praise all contributions.
T points out (or gives hints about) any not mentioned by Ps.

Ask Ps why they think c) has a larger area. (More regular)

7

Area and perimeter

a) Draw different rectangles which have an area of 24 unit squares. Compare their perimeters.

Set a time limit. T chooses Ps to show different rectangles on a grid on BB or OHP. Which has the longest perimeter?

Individual work, monitored, helped
Ps use squared *Ex. Bks* or have squared sheets on desks.
Differentiation by time limit
Discussion on the different possible lengths of sides.
Relate to the factors of 24:
 $1 \times 24, 2 \times 12, 3 \times 8, 4 \times 6$
Agree that the longest perimeter has the least number of sides of a square touching another square, i.e. one row!
Agreement, praising

Y3

Lesson Plan 164

Activity

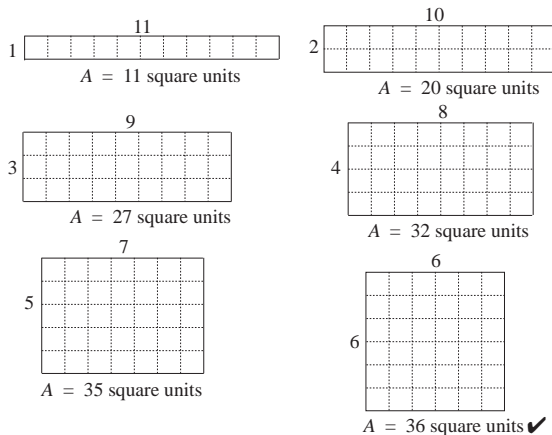

7

(Continued)

b) Draw different rectangles which have a perimeter of 24 units. Compare their areas.

Set a time limit.. T chooses Ps to show different rectangles on a grid on BB or OHP. Which has the biggest area?

BB:

40 min

Notes

Individual work, monitored, helped

(Or T could have BB or OHT already prepared)

Discussion on the different possible lengths of sides.

Ps might notice that:
short + long side = 12 units,
so possible lengths are:
1 + 11, 2 + 10, 3 + 9, 4 + 8,
5 + 7, 6 + 6

Agree that the rectangle with the largest area is the most regular, i.e. a square.

Extra praise for Ps who deduced this by themselves.

8

PbY3b, page 164, Q.3

Read: *Divide up each shape into rectangles and triangles.*

Write the area of each smaller shape inside it.

Write the total area of each shape in the box.

Ps come to BB to draw the dividing lines. Other Ps come to BB to count the squares and write the area of each part, (counting the small triangles as half a square). What is the total area? Ps shout out in unison and T writes in relevant box. T might need to help with counting the parts of squares in b).

(Or part a) done as individual work and part b) with the whole class.)

Solution:

45 min

Whole class activity

Drawn on BB or use enlarged copy master or OHP

At a good pace

Discussion, agreement, praising

Ps can work in in *Pbs* too if they wish.

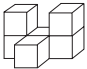

[Finding the area of complex shapes]

Who can think of questions to ask about the shapes? (e.g.

- What is the length of each perimeter?
- Which shape is symmetrical?
- How many vertices do they each have? etc.)

<p>2</p>	<p>Number sets</p> <p>Let's write these numbers in the correct place in the set diagrams.</p> <p>Ps come to BB one after the other to write numbers in the sets and to underline or circle the number in the list as it is dealt with. Class points out errors.</p> <p>BB: $A = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 15, 16, 18, 20, 21, 24, 30\}$</p> <div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <p>A</p> <p>Factors of 12</p> <p>1 2 3 4 6 12</p> <p>5 7 8 9 10 15 16 18 20 21 24 30</p> </div> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <p>A</p> <p>4 7 8 9 12 16 18 20 21 24</p> <p>1 2 3 5 6 10 15 30</p> <p>Factors of 30</p> </div> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <p>7 8 9 A 16 18</p> <p>Factors of 12 20</p> <p>4 12</p> <p>1 2 3 6</p> <p>5 10 15 30</p> <p>24 Factors of 30 21</p> </div> </div> <p>I will make statements about the sets and you must show me whether you think they are true or false.</p> <p>a) There is at least one number which is a factor of 12 and 30. (T) b) All the numbers which are factors of 12 are also factors of 30. (F) c) There is a number which is a factor of 30 but not a factor of 12. (T)</p>	<p>Whole class activity Written/drawn on BB or use enlarged copy master or OHP Elicit that 'A' in the diagrams means all the numbers inside the curly brackets.</p> <p>At a good pace Agreement, praising Feedback for T</p> <p>T repeats slowly and Ps show responses in unison (by writing 'T' or 'F' on slates or by pre-agreed actions)</p> <p>e.g. 2 e.g. 4 is not a factor of 30 e.g. 5</p>																																																																																						
<p>3</p>	<p>Smallest numbers</p> <p>Write these digits in your <i>Ex. Bks</i>. Cross out 3 of the digits so that the remaining digits make as small a number as possible without changing the order. T dictates and also writes on BB:</p> <p>a) 987987 b) 454432 c) 100345 (787) (432) (1003)</p> <p>Review at BB with whole class. Ps come to BB to cross out digits and rewrite the smallest numbers. Class agrees/disagrees. Mistakes discussed and corrected (Ps can suggest a list of digits too!)</p>	<p>Individual work, monitored, helped</p> <p>Do part a) with whole class first if Ps do not understand what to do.</p> <p>At a good pace Reasoning, agreement, self-correction, praising</p>																																																																																						

Y3		Lesson Plan 166															
<p>Activity</p> <p>4</p>	<p>Problem</p> <p>Listen carefully and picture the problem in your head. Write the data in your <i>Ex. Bks.</i> Think about what data is important and cross out the data you do not need. Do the calculation and show me the answer when I say.</p> <p><i>A newborn grey whale is about 4 and a half metres long and weighs about 1500 kg. It drinks about 200 litres per day of its mother's milk, so its weight increases by about 20 kg each day. After how many days will the baby whale weigh 2000 kg?</i></p> <p>Show me . . . now! (25 days)</p> <p>Ps who answered correctly explain at BB. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p>BB: Birth weight: 1500 kg Final weight: 2000 kg Each day: + 20 kg $(2000 \text{ kg} - 1500 \text{ kg}) \div 20 \text{ kg} = 500 \text{ kg} \div 20 \text{ kg}$ $= 50 \text{ kg} \div 2 \text{ kg} = \underline{25}$ (days)</p> <p><i>Answer:</i> The baby whale will weigh 2000 kg after 25 days.</p> <p style="text-align: right;">20 min</p>	<p>Notes</p> <p>Individual trial, monitored</p> <p>Responses shown on scrap paper or 'slates' in unison</p> <p>T repeats slowly. Give Ps time to make notes, think and calculate.</p> <p>In unison</p> <p>T could have problem written on SB or OHT.</p> <p>Reasoning, agreement, self-correction, praising</p> <p>Feedback for T</p> <p>T asks Ps to say the answer in a sentence.</p>															
<p>5</p>	<p>Drawing cuboids</p> <p>Ps each have, e.g. an empty matchbox, on their desk. What shape is it? (cuboid) How many faces does it have? (6) Elicit that each face is a rectangle and that opposite faces are equal, so there are only 3 different sizes of rectangle. Let's draw them.</p> <p>T (or P) draws around large model on BB, Ps in <i>Ex. Bks.</i> e.g.</p> <p>BB: <u>Front view</u> <u>Side view</u> <u>Top view</u></p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="border: 1px solid black; width: 40px; height: 20px;"></div> <div style="border: 1px solid black; width: 10px; height: 30px;"></div> <div style="border: 1px solid black; width: 50px; height: 10px;"></div> </div> <p>Repeat with a box shaped like a cube.</p> <p>BB: <u>Front view</u> <u>Side view</u> <u>Top view</u></p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="border: 1px solid black; width: 40px; height: 40px;"></div> <div style="border: 1px solid black; width: 40px; height: 40px;"></div> <div style="border: 1px solid black; width: 40px; height: 40px;"></div> </div> <p>Who can tell us something about the solids? Ps come to BB to point to vertices, sides, parallel and perpendicular lines on drawings and vertices, edges, faces (perpendicular and parallel) on the large models.</p> <p style="text-align: right;">25 min</p>	<p>Whole class discussion to start</p> <p>BB: <u>Cuboid</u></p> <p>Discuss the different ways to view the 3 rectangles.</p> <p>Individual work in drawing, monitored, helped</p> <p>Praising, encouragement only</p> <p>BB: <u>Cube</u></p> <p>Elicit that a cube is a regular cuboid, that all 6 faces are equal and that each view will be a square.</p> <p>Discussion, demonstration, agreement, praising only (Revision of terms)</p>															
<p>6</p>	<p>PbY3b, page 166</p> <p>Q.1 Read: <i>This solid has been built from unit cubes. Draw different views of it.</i></p> <p>Ps build solid from unit cubes first. Who can explain the ground plan? (Numbers refer to how many bricks high that column is.)</p> <p>In the grids, draw what you would see from the different views.</p> <p>Review at BB with whole class. 3 Ps come to BB to draw the 3 views. Class agrees/disagrees. Mistakes discussed/corrected.</p> <p>What is its volume? (6 cubes) What is the area of its surface? Ps count or calculate. T confirms by referring to large model.</p> <p>BB: A = <u>26 unit squares</u></p> <p style="text-align: right;">30 min</p>	<p>Individual work, monitored, helped</p> <p>Use large model. Diagrams drawn on BB or use enlarged copy master or OHP.</p> <p>Agreement, self-correction, praising</p> <p><i>Solution:</i></p> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  </div> <div style="text-align: center;"> <p>Ground plan</p> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td style="width: 15px; height: 15px;">2</td><td style="width: 15px; height: 15px;">1</td><td style="width: 15px; height: 15px;">2</td></tr> <tr><td style="width: 15px; height: 15px;">1</td><td colspan="2"></td></tr> </table> </div> </div> <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;"> <p>Front view</p> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td style="width: 15px; height: 15px;">2</td><td style="width: 15px; height: 15px;">1</td><td style="width: 15px; height: 15px;">2</td></tr> </table> </div> <div style="text-align: center;"> <p>Top view</p> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td style="width: 15px; height: 15px;">2</td><td style="width: 15px; height: 15px;">1</td><td style="width: 15px; height: 15px;">2</td></tr> </table> </div> <div style="text-align: center;"> <p>Right side view</p> <table border="1" style="border-collapse: collapse; text-align: center;"> <tr><td style="width: 15px; height: 15px;">2</td><td style="width: 15px; height: 15px;">1</td><td style="width: 15px; height: 15px;">2</td></tr> </table> </div> </div>	2	1	2	1			2	1	2	2	1	2	2	1	2

Lesson Plan 166

Activity

7

PbY3b, page 166

Q.2 Ps have unit cubes (or multilink or Cuisenaire rods) on desks. Start with simpler shapes first if necessary, e.g. 2, 3, and 4 cubes in a row. Ps build the solids, then come to BB to draw the ground plans on a grid. What is the volume (surface area)? Ps work out area by counting the squares or by calculation. e.g. BB:

		
		
$V = 2 \text{ cubes}$	$V = 3 \text{ cubes}$	$V = 4 \text{ cubes}$
$A = (4 \times 2 + 2 \times 1) \text{ squares}$ $= 10 \text{ squares}$	$A = (4 \times 3 + 2 \times 1) \text{ squares}$ $= 14 \text{ squares}$	$A = (4 \times 4 + 2 \times 1) \text{ squares}$ $= 18 \text{ squares}$

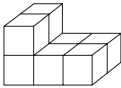

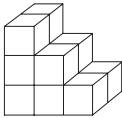

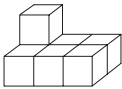

Read: *Build the solids with unit cubes. Fill in the ground plan for each one.*

Review at BB with whole class. Mistakes discussed/corrected.

Read: *How many unit cubes were needed to build each solid? This is their volume.*

Review with whole class. Ps dictate volumes and T writes on BB. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

a) 	b) 	c) 
		
$V = 8 \text{ cubes}$	$V = 12 \text{ cubes}$	$V = 7 \text{ cubes}$

What is the surface area of each solid? Ps count the squares and dictate findings to T. Class agrees/disagrees.

38 min

Notes

Individual work, monitored, helped, corrected

T could have large models already prepared.

Diagrams drawn on BB or use enlarged copy master or OHP

Discussion, agreement, praising

Individual work, monitored, helped

T has large models prepared.

Drawn on BB or use enlarged copy master or OHP

Reasoning, agreement, self-correction, praising

Whole class activity

Agreement, praising

a) 28 squares b) 36 squares
c) 26 squares

Extension

8

PbY3b, page 166

Q.3 a) Read: *Reduce this cuboid to:*
i) *half its size* ii) *1 third of its size.*

Talk about the cuboid first. Elicit lengths of edges (in number of cubes and grid units). Discuss, using a model, why the side face of the cube is shown in the diagram as shorter (2 diagonal grid units) because we cannot see it face on.

Ps do part i) in *Pbs*, counting the grid units along the edges of the original cuboid and drawing each line half as long. Review at BB with whole class. Mistakes discussed/corrected.

Do part ii) with the whole class. Ps come to BB to draw lines. Class agrees/disagrees. Discuss how long the slanting edge should be (1 third of 2 = 1 third of 6 thirds = 6 thirds ÷ 3 = 2 thirds of a diagonal unit).

Solution:

Individual work, monitored, helped, corrected

Whole class discussion to start
T could have large model to demonstrate shortening effect.

Drawn on grid on BB or use enlarged copy master or OHP
Agreement, self-correcting, praising

Whole class activity

With T's help if necessary

Discussion, reasoning, agreement, praising

Ps draw cubes in *Pbs* too as they are dealt with.

Y3

Lesson Plan 166

Activity

8

(Continued)

Q.3 b) Read: *Enlarge this cuboid to:*

- i) *twice its size* ii) *3 times its size.*

Talk about the cuboid first. Elicit lengths of edges (in cubes and grid units). Discuss, using a model, why the side face of the cube is shown in the diagram as shorter, i.e.

1 diagonal grid unit, because we cannot see it face on.

Ps count the units along the edges of the original cuboid and draw each line twice (3 times) as long.

Review at BB with whole class. Mistakes discussed/corrected.

Solution:

c) Read: *What is the volume of each of the 6 cuboids? Write it beside them.*

In part a), Ps count the cubes (shown by the solid lines). Agree that they are all made from $3 \times 3 \times 2 = 18$ cubes. Are the cubes in each solid the same size? (No)

Let's use the same size of cube (a unit cube) to measure the volume of the solids in part b) so that we can compare them. Agree on using a unit cube with each face the size of a grid square. T draws solid lines to show the unit cubes. Ps come to BB to count or calculate (length \times width \times height).

BB:

$$V = 3 \times 2 \times 1 \\ = 6 \text{ (unit cubes)}$$

$$V = 6 \times 4 \times 2 \\ = 48 \text{ (unit cubes)}$$

$$V = 9 \times 6 \times 3 \\ = 162 \text{ (unit cubes)}$$

What do you notice? (enlargement by 2 times \rightarrow 8 times the volume; enlargement by 3 times \rightarrow 27 times the volume)

Who can explain it? (twice as long, twice as wide, twice as high, i.e. $2 \times 2 \times 2 = 8$ times more; 3 times as long, 3 times as wide, 3 times as high, i.e. $3 \times 3 \times 3 = 27$ times more)

45 min

Notes

Individual work, monitored, helped, corrected

Whole class discussion to start
T could have large model for demonstration.

Drawn on grid on BB or use enlarged copy master or OHP
Agreement, self-correcting, praising

(Or part ii) done with the whole class.)

Whole class activity

Discussion, agreement, praising

T has 3 models already prepared + a unit cube to show
(Or T has BB or SB or OHT already prepared)

Calculations written on BB.

Agreement, praising

Details written on BB: e.g.

$$9 \times 6 \times 3 = 9 \times 18 \\ = 9 \times 9 \times 2 \\ = 81 \times 2 \\ = \underline{162}$$

Discussion, agreement, praising

Y3

R: Calculation
 C: **How many possible cases? (Combinatorics)**
 E: Problems

Lesson Plan 167

Activity

1

Possible numbers

T has 4 numbers cards stuck to BB:

0	1	2	4
---	---	---	---

- a) How many 3-digit whole tens can you make from these digits?
 You cannot use a digit more than once.

Ps come to BB to rearrange the cards and write their number in a place value table. Class points out duplications or repeated digits. Encourage logical listing. Agree that '0' must be in units column.

BB: e.g.

H	T	U
1	2	0
1	4	0
2	1	0
2	4	0
4	1	0
4	2	0

 Agree that there are 6 possible whole tens.
 What is their total? (1540)
 Ps use vertical addition or:
 $2 \times 100 \times (1 + 2 + 4) + 2 \times 10 \times (1 + 2 + 4)$
 $= 200 \times 7 + 20 \times 7 = 1400 + 140 = \underline{1540}$

- b) How many odd numbers can you make from these digits?
 You cannot use a digit more than once.

Ps come to BB to rearrange the cards and write their number in a place value table. Class points out duplications or repeated digits. Encourage logical listing. Agree that '1' must be in the units column.

BB: e.g.

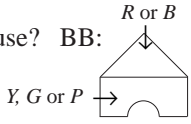

(4-digits)	(3-digits)	(2-digits)	(1-digit)																																											
<table border="1"><tr><td>Th</td><td>H</td><td>T</td><td>U</td></tr><tr><td>2</td><td>0</td><td>4</td><td>1</td></tr><tr><td>2</td><td>4</td><td>0</td><td>1</td></tr><tr><td>4</td><td>0</td><td>2</td><td>1</td></tr><tr><td>4</td><td>2</td><td>0</td><td>1</td></tr></table>	Th	H	T	U	2	0	4	1	2	4	0	1	4	0	2	1	4	2	0	1	<table border="1"><tr><td>H</td><td>T</td><td>U</td></tr><tr><td>2</td><td>0</td><td>1</td></tr><tr><td>2</td><td>4</td><td>1</td></tr><tr><td>4</td><td>0</td><td>1</td></tr><tr><td>4</td><td>2</td><td>1</td></tr></table>	H	T	U	2	0	1	2	4	1	4	0	1	4	2	1	<table border="1"><tr><td>T</td><td>U</td></tr><tr><td>2</td><td>1</td></tr><tr><td>4</td><td>1</td></tr></table>	T	U	2	1	4	1	<table border="1"><tr><td>U</td></tr><tr><td>1</td></tr></table>	U	1
Th	H	T	U																																											
2	0	4	1																																											
2	4	0	1																																											
4	0	2	1																																											
4	2	0	1																																											
H	T	U																																												
2	0	1																																												
2	4	1																																												
4	0	1																																												
4	2	1																																												
T	U																																													
2	1																																													
4	1																																													
U																																														
1																																														

Agree that there are 11 possible odd numbers.

6 min

2

Possible colours

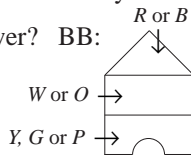

- a) In how many different ways can we make this house? BB: 
 The roof can be either *red* or *blue* and the walls can be *yellow*, *green* or *pink*.

Let's show the different ways in this table. Ps come to BB to choose 2 colours at a time and fill in a column in the table.

BB:

	R	R	R	B	B	B						
	Y	G	P	Y	G	P						

Agree that for each of the 2 colours chosen for the roof, there are 3 possible colours for the walls., i.e. $2 \times 3 = \underline{6}$ different ways.

- b) In how many different ways can we make this tower? BB: 
 The roof can be either *red* or *blue*, the top floor can be either *white* or *orange*, and the bottom floor can be *yellow*, *green* or *pink*.

Let's show the different ways in this table. Ps come to BB to choose 3 colours at a time and fill in a column in the table.

BB:

	R	R	R	R	R	B	B	B	B	B	B	
	W	W	W	O	O	O	W	W	W	O	O	O
	Y	G	P	Y	G	P	Y	G	P	Y	G	P

Agree that there are $2 \times 2 \times 3 = \underline{12}$ different ways.

15 min

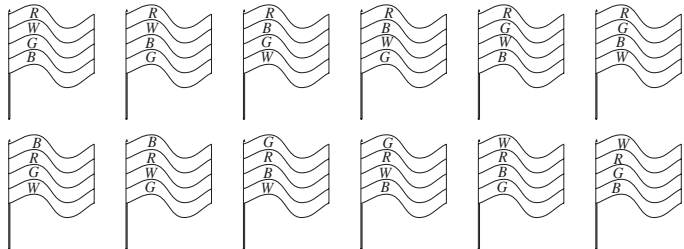

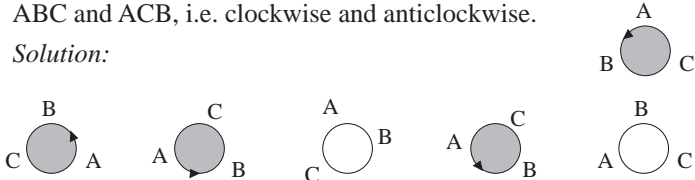

Notes

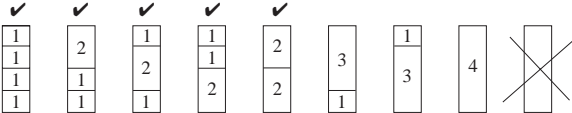

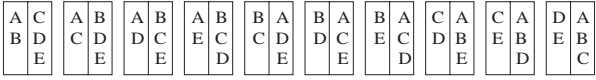

Whole class activity
 (Or individual or paired work if Ps wish. Ps have number cards on desks.)
 Place value tables drawn on BB
 At a good pace
 Reasoning, agreement, praising
 Accept any correct method of calculating.

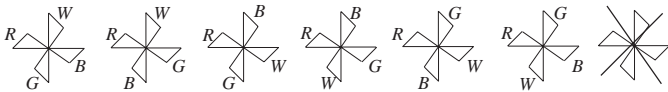

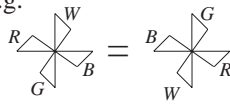

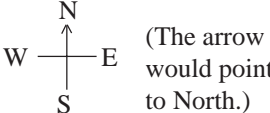

Whole class activity (or paired work in *Ex. Bks* if Ps wish)
 At a good pace
 T helps with layout of listing if necessary.
 Agreement, praising

Whole class activity
 Use elements from a construction set, or if there are not enough colours, use copy masters enlarged onto coloured paper and cut out for Ps to have on desks.
 Tables drawn on BB or use enlarged copy master
 At a good pace
 (Or Ps dictate to T and T writes in table to save time.)

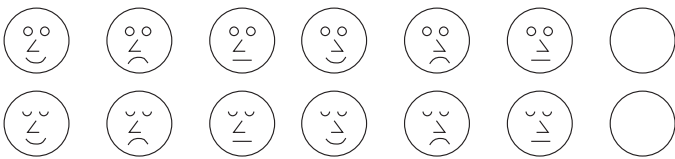

Discussion, agreement, praising
 (Elicit that for each of the 2 colours chosen for the roof, there are 2 possible colours for the top floor, and for each of these there are 3 possible colours for the bottom floor.)
 Feedback for T

<h1>Y3</h1>		<p>Lesson Plan 167</p>
<p>Activity</p> <p>3</p>	<p>PbY3b, page 167</p> <p>Q.1 Read: <i>In how many different ways can you colour the flags red, white, green and blue?</i></p> <p><i>Use every colour only once in each flag.</i></p> <p>Set a time limit. Review at BB with whole class. Elicit that for each of the <u>4</u> colours chosen for the top stripe there are <u>3</u> choices for the 2nd stripe, then for each of these there are <u>2</u> choices for the 3rd stripe, then for each of these there is only <u>1</u> choice for the bottom stripe, i.e. there are $4 \times 3 \times 2 \times 1 = 24$ different ways BUT the flags can be flown upside down too, so really there are only 12 ways!</p> <p><i>Solution:</i></p>  <p style="text-align: center;">22 min</p>	<p>Notes</p> <p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>T has spare copies of flags in case Ps ask for more than are in the <i>Pbs</i>.</p> <p>Ps dictate colours or T could have copy master already coloured to save time.</p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>Extra praise if Ps realise there are only 12 possible flags without help from T.</p>
<p>Extension</p>	<p>4</p> <p>PbY3b, page 167</p> <p>Q.2 Read: <i>Andrea, Becky and Carol are sitting around a circular table. Colour the tables where the girls are sitting in the same order.</i></p> <p>Imagine you are one of the girls. Think about who could be on each side of you! T sets a time limit.</p> <p>Review at BB with whole class. Demonstrate with 3 Ps at front of class. Agree that there are only 2 possible orders: ABC and ACB, i.e. clockwise and anticlockwise.</p> <p><i>Solution:</i></p>  <p>T chooses 3 Ps to stand in a row facing the class. In how many different orders can they be? T asks several Ps what they think and why. ($3 \times 2 \times 1 = 6$ possible orders) Ps at front demonstrate as a check.</p> <p style="text-align: center;">27 min</p>	<p>Individual work, monitored</p> <p>Drawn on BB or use enlarged copy master or OHP (Ps could use coloured counters for A, B and C and rearrange them on desks if they wish.)</p> <p>Agreement, checking, self-correcting, praising</p> <p>Elicit that there are 3 choices for the 1st P, then 2 choices are left for the middle P, then only 1 choice is left for the last P.</p>
<p>5</p>	<p>Pby3b, page 167</p> <p>Q.3 Imagine you are going upstairs. If there is only 1 stair, in how many ways can you step up it? (1 way: take 1 step). If there are 2 stairs, in how many ways could you step up them? (2 ways: 1 stair at a time or 2 stairs at once.) T draws diagrams on BB.</p> <p>Repeat for 3 stairs. (T could have a set of steps at the front of the class for demonstration.)</p> <p>BB:</p> <p style="text-align: center;">4 ways</p>	<p>Whole class activity</p> <p>Discussion, demonstration, agreement, praising</p> <p>Ps could draw the diagrams, with T's help.</p>

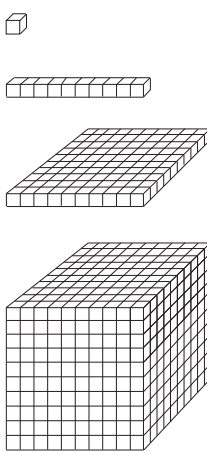

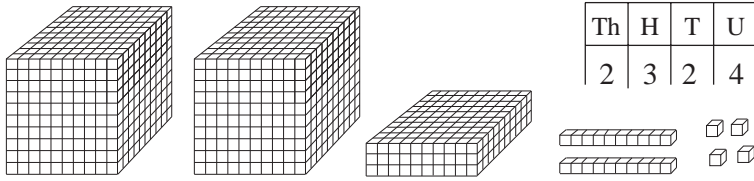

<h1>Y3</h1>		<p>Lesson Plan 167</p>																																		
<p>Activity</p> <p>5</p>	<p>(Continued)</p> <p>a) Read: <i>In how many different ways can you build a tower 4 units high using 1, 2, 3, or 4 unit rods? Draw the possible ways.</i></p> <p>If possible, Ps could have multilink strips or Cuisenaire rods on desks to help them. Elicit that each unit rod will be 1 quarter of the height of the tower.</p> <p>Set a time limit. Review at BB with whole class. Ps come to BB to show solutions. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p>Solution:</p>  <p style="text-align: center;">8 ways</p> <p>b) Read: <i>If you could use only 1 or 2 unit rods, how many ways are possible?</i></p> <p>T asks several Ps what they think. Agree that there are <u>5</u> ways.</p> <p>Note to T:</p> <table border="1" data-bbox="293 981 983 1059"> <tr> <td>Building columns:</td> <td>Height (units)</td> <td>1</td> <td>2</td> <td>3</td> <td>4</td> <td>5</td> <td>6</td> <td>...</td> </tr> <tr> <td></td> <td>Number of ways</td> <td>1</td> <td>2</td> <td>4</td> <td>8</td> <td>16</td> <td>32</td> <td>...</td> </tr> </table> <p>Building from only 1 or 2 unit rods:</p> <table border="1" data-bbox="411 1122 1062 1200"> <tr> <td>Height (units)</td> <td>1</td> <td>2</td> <td>3</td> <td>4</td> <td>5</td> <td>6</td> <td>...</td> </tr> <tr> <td>Number of ways</td> <td>1</td> <td>2</td> <td>3</td> <td>5</td> <td>8</td> <td>13</td> <td>... <p>6</p>	<p>PbY3b, page 167</p> <p>Q.4 Read: <i>Alan, Brian and Charlie go to a summer camp. There are only 2 bedrooms in their hut. One room has 2 beds and the other has 3 beds. Show on the diagram the different ways they could share rooms.</i></p> <p>Study the diagram and tell me what information is missing from this story. (Two other children, D and E, are also sharing the hut.)</p> <p>Ps choose names for them (e.g. David and Eddie).</p> <p>One way they could share rooms is given. Show as many other ways as you can. T sets a time limit. Encourage a logical listing.</p> <p>Review at BB with whole class. Ps dictate to T who writes on BB. Agree that there are <u>10</u> ways (the order in a room does not matter).</p> <p>Solution:</p>  <p style="text-align: right;">40 min</p>	<p>Individual work, monitored, helped</p> <p>(or whole class activity with 5 Ps at front of class acting out the different ways)</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Discussion, agreement, self-correcting, praising</p> <p>Extension</p> <p>If the rooms were allocated randomly, what chance would David and Eddie have of sharing the same room? (4 in 10, or 4 tenths = 2 fifths)</p>																																		
<p>7</p>	<p>Revision</p> <ul style="list-style-type: none"> T says an operation (+, -, ×, ÷) Ps say only result. How many: g are in 2.5 kg (cm in 30 km, cl in 5 litres 2 cl, etc.) T gives instructions. Stand vertically (horizontally). Hold your arms parallel (at right angles). Turn to face N, SW, NE. etc. T writes numbers (draws shapes) randomly on BB. Ps think of questions to ask about them. (names, sets, similarity, congruence, etc.) <p style="text-align: right;">45 min</p>	<p>Whole class activity</p> <p>Some examples given but T can choose appropriate tasks according to revision needs of class.</p> <p>Praising, encouragement only</p>																																		

<h1 style="text-align: center;">Y3</h1>	<p>R: Calculation C: Combinatorics. Probability E: Problems</p>	<h2 style="font-style: italic;">Lesson Plan</h2> <h1 style="font-size: 2em;">168</h1>						
<p>Activity</p> <p style="text-align: center;">1</p>	<p><i>Pby3b, page 168</i></p> <p>Q.1 a) Read: <i>Colour the windmills red, white, yellow and green so that each one is different from the others.</i></p> <p>What do windmills do? (Turn) Remember this when you are colouring. Make sure that the colours are in different <u>orders</u> in the same direction. Encourage logical working.</p> <p>Review at BB with whole class. Ps come to BB to colour or write R, W, Y and G on diagram. Class points out missed cases or duplicates. Agree that there are <u>6</u> different cases.</p> <p><i>Solution:</i></p>  <p>b) Read: <i>Mr. Silly does not know his compass directions. He paints the letters N, E, S and W on the compass at random. What chance does he have of painting the compass correctly?</i></p> <p>T asks several Ps how they would solve it. T gives hint about similarity to part a) if nobody knows.</p> <p>Elicit that <i>Mr. Silly</i> had the same task as in a) but he was writing 4 letters in a circle rather than using 4 colours. So there would be 6 possible ways he could do it randomly. Only <u>one</u> way would be correct: NESW clockwise.</p> <p><i>Solution:</i> The chance of NESW is 1 in 6, or 1 sixth. (If there is no arrow on the face to help him!)</p> <p style="text-align: right;">8 min</p>	<p style="text-align: center;">Notes</p> <p>Whole class introduction T could have a 'real' windmill to show to class and to demonstrate that the order matters. Show by rotation that, e.g.</p>  <p>Then individual colouring, monitored, helped</p> <p>Discussion, agreement, self-correction, praising</p> <p>Whole class activity Compass drawn on BB or use enlarged copy master or OHP</p> <p>Discussion, reasoning, agreement, praising</p> <p>Allow Ps to explain if they can, then T repeats in a clearer way if necessary.</p> <p>BB</p>  <p>(The arrow would point to North.)</p>						
<p style="text-align: center;">2</p> <p>Extension</p>	<p>Probability 1</p> <p>If I toss a coin once, what is the chance (probability) of me getting:</p> <p>a) a head (1 half) b) a tail? (1 half)</p> <p>Who can explain it? (There are only <u>2</u> possible cases, a head or a tail, and each has an <u>equal</u> chance of landing face up.)</p> <p>We say that the probability of a <u>certain</u> event happening is 1 and the probability of an <u>impossible</u> event happening is 0. Events which are <u>possible but not certain</u> have a probability between 1 and 0, i.e. are fractions!</p> <p>How many heads (tails) would we <u>expect</u> to get if we tossed a coin 4 (6, 20, 100, 1000, 53) times? (2, 3, 10, 50, 500, 26 or 27 times)</p> <p>Who has heard someone say that an event has a 50 per cent chance of happening? Who knows what it means? (50 'per cent' means 50 out of 100) Who knows how to write it? T shows if nobody knows. (BB: 50%) Discuss meaning of 50% and 100% as 1 half and 1 whole.</p> <p>[A computer simulation would be good for 100 and 500 tosses, or T could use a calculator to generate random numbers.]</p> <p style="text-align: right;">15 min</p>	<p>Whole class activity T asks several Ps. T repeats clearly if necessary</p> <p>BB: <u>Event</u> <u>Probability</u></p> <table style="margin-left: 20px;"> <tr> <td>Certain</td> <td>1</td> </tr> <tr> <td>Impossible</td> <td>0</td> </tr> <tr> <td>Possible but not certain</td> <td>$0 < P < 1$</td> </tr> </table> <p>T chooses Ps at random Discuss the case of 53, which is odd.</p> <p>Discussion. Allow Ps to try to explain first. (Ps might have heard of the expression, a 'fifty-fifty chance'. Relate it to 50% for, 50% against.)</p>	Certain	1	Impossible	0	Possible but not certain	$0 < P < 1$
Certain	1							
Impossible	0							
Possible but not certain	$0 < P < 1$							

<p>Y3</p>		<p><i>Lesson Plan 168</i></p>
<p>Activity</p> <p>3</p>	<p>Probability 2</p> <p>a) If I throw a dice once, what is the chance (probability) of me getting a 1 (2, 3, 4, 5, 6)? (1 sixth)</p> <p>Who can explain it? (Because there are 6 possible cases: 1, 2, 3, 4, 5 or 6 and each has an <u>equal</u> chance of landing face up.)</p> <p>b) What is the probability of getting:</p> <p>i) a number greater than 2 (4 sixths = 2 thirds)</p> <p>ii) an odd number (3 sixths = 1 half)</p> <p>iii) a number not less than 3 (4 sixths = 2 thirds)</p> <p>iv) the number 7 (0) Impossible, not on dice.</p> <p>v) the number 3 and a half (0) Impossible, not on dice.</p> <p>vi) a number less than 10? (1) Certain, all 6 numbers < 10.</p> <p style="text-align: right;">20 min</p>	<p>Notes</p> <p>Whole class activity T chooses Ps at random. Reasoning, agreement T repeats more clearly if necessary.</p> <p>Ps could show answers on scrap paper or slates in unison. Ps responding correctly explain to those who do not. Praising, encouragement only! Feedback for T</p>
<p>4</p>	<p>PbY3b, page 168</p> <p>Q.2 Read: <i>Write the letters E, I, F and L in every possible order.</i></p> <p>T writes tthe 4 letters on BB. Let's make it easier for ourselves by first drawing a <u>tree diagram</u>. T starts and Ps continue at BB when they understand (with T's help).</p> <p>Let's start with the letter E. What could the 2nd letter be? (I, F or L) If the 2nd letter is I, what could the 3rd letter be? (F or L) etc.</p> <p>BB: E, I, F, L</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> </div> <div style="text-align: center;"> </div> </div> <div style="display: flex; justify-content: space-around; margin-top: 20px;"> <div style="text-align: center;"> </div> <div style="text-align: center;"> </div> </div> <p>Elicit that there are <u>24</u> cases. Who can explain it?</p> <p>(For each of the <u>4</u> possible letters chosen first, there are <u>3</u> possible letters left as 2nd choice, and for each of these there are <u>2</u> possible letters left as 3rd choice and for each of these there is only <u>1</u> possible letter left, i.e. $4 \times 3 \times 2 \times 1 = \underline{24}$)</p> <p>Read: <i>Circle the meaningful words.</i></p> <p>Review at BB with whole class. Ps dictate to T or come to BB to point to them on tree diagram. Agree that there are only 2 meaningful words: FILE and LIFE.</p> <p>Read: <i>If a computer printed the 4 letters randomly, what chance would there be of it printing a meaningful word?</i></p> <p>Ask several Ps what they think. Agree that the chance of a getting a meaningful word is 2 in 24 times, or has a probability of <u>2 twenty-fourths</u> (= 1 in 12 times or 1 twelfth)</p> <p>Who remembers how to write fractions using only numbers?</p> <p style="text-align: right;">28 min</p>	<p>Whole class introduction</p> <p>BB: <u>Tree diagram</u></p> <p>Ps shout out what T should write.</p> <p>T writes letters on BB and Ps list the orders in their <i>Pbs</i> as each letter is dealt with.</p> <p>Use enlarged copy master/OHP</p> <p>Discussion, agreement, praising</p> <p><i>Solution:</i></p> <p>EIFL IEFL FEIL LEIF EILF IELF FELI LEFI EFIL IFEL FIEL LIEF EFLI IFLE <u>FILE</u> <u>LIFE</u> ELIF ILEF FLEI LFEI ELFI ILFE FLIE LFIE</p> <p>T repeats more clearly if necessary. Praising</p> <p>Individual work, monitored Agreement, praising</p> <p>(Or give Ps time to think and then Ps show answer in unison on command.) Reasoning, agreement, praising</p> <p>BB: $\frac{2}{24} = \frac{1}{12}$ T shows if no one knows.</p>

<p>Y3</p>		<p><i>Lesson Plan 168</i></p>
<p>Activity</p> <p>5</p>	<p>PbY3b, page 168</p> <p>Q.3 Read: <i>How many different faces can you draw if you choose from these features?</i></p> <p>Encourage methodical working. Review at BB with whole class. Ps come to BB one after the other to draw a different face. (or T has solution already prepared and uncovers each case as Ps describe it.) Mistakes discussed and corrected.</p> <p>Solution: $(2 \times 2 \times 3 = 12 \text{ cases})$</p>  <p>Read: <i>If a machine painted features on 120 faces at random, how many faces would you expect to be smiling?</i></p> <p>Ps write answer in Pbs. X, what did you write? Why? Who agrees? Who thinks something else? etc. Mistakes corrected. (Probability of a smiling face is 4 out of 12 times, i.e. 4 twelfths or 1 third. 1 third of 120 faces = 120 faces \div 3 = 40 faces)</p> <p>Who can think of other probability questions about the faces?</p> <p style="text-align: right;">35 min</p>	<p>Notes</p> <p>Individual work., monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>At a good pace</p> <p>Discussion, agreement, self-correction, praising</p> <p>(2 pairs of eyes, 2 kinds of nose, 3 kinds of mouth)</p> <p>(Or whole class activity)</p> <p>Discussion, reasoning, agreement, self-correcting, praising</p> <p>BB: $\frac{4}{12} = \frac{1}{3}$</p> <p>e.g. probability of a sleeping face is 1 half; of a sleeping sad face is 1 twelfth.</p>
<p>6</p> <p>Problems</p> <p>Listen carefully, picture the story in your head and show me the answer when I say. Ps who respond correctly explain to those who do not.</p> <p>a) <i>Each of these 3 boxes contains 2 marbles. The marbles are either striped or plain. I have made sure that the contents of each box is different. What could the boxes contain?</i></p> <p>Ps suggest what T should draw on BB. (Agree that  = ) as position in the box does not matter.)</p> <p><i>We cannot see inside the boxes and they all look the same from the outside. What chance would you give that if we opened a box there will be a striped marble and a black marble inside?</i></p> <p>Show me . . . now! (1 third, as only 1 case possible out of 3)</p> <p>b) <i>Every day, a Princess has a ride in a carriage drawn by 2 horses. She has 2 black and 2 white horses in her stable but her groom chooses 2 horses <u>at random</u> each day.</i></p> <p><i>What is the probability that today her carriage will be drawn by a white horse and a black horse?</i></p> <p>Show me . . . now! (2 quarters or 1 half or 50%)</p> <p>Agree that 2 cases are possible out of 4 possible outcomes, each of which is equally likely to occur.</p> <p>Extension</p> <p>Who can think of another probability question to ask?</p> <p style="text-align: right;">40 min</p>		<p>Whole class activity</p> <p>T has 3 boxes already prepared.</p> <p>BB: </p> <p>Discussion, agreement</p> <p>Give Ps time to think</p> <p>Reasoning, agreement, praising</p> <p>T repeats slowly and Ps repeat in own words.</p> <p>Reasoning, agreement, praising</p> <p>BB: BB BW WB WW</p> <p>Discussion, agreement</p> <p>(e.g. probability of 2 black horses is 1 quarter)</p>

Y3		<i>Lesson Plan 168</i>
<p>Activity</p> <p>7</p>	<p>PbY3b, page 168</p> <p>Q.4 Read: <i>Andrew, Betty, Cliff and Dorothy went sledging with one 2-seater sledge. Show the different ways they can take turns on the sledge.</i></p> <p>Encourage logical listing. Review at BB with whole class. Ps dictate to T or come to BB one after the other to write initial letters on the sledges. Mistakes/omissions put right. Elicit that there are <u>12</u> possible cases. (4×3)</p> <p><i>Solution:</i> (If position matters, e.g. front of sledge is on LHS)</p> <p style="text-align: center;"> Front { A B { A C { A D { B A { B C { B D </p> <p style="text-align: center;"> { C A { C B { C D { D A { D B { D C </p> <p>If they draw lots for each turn, what chance would you give for these events happening?</p> <p>a) Two girls are on the sledge? (2 twelfths = 1 sixth)</p> <p>b) Betty is sitting in front? (3 twelfths = 1 quarter = 25%)</p> <p>c) Cliff is sitting at the back? (3 twelfths = 1 quarter = 25%)</p> <p>Who can think of other probability questions to ask?</p> <p>e.g. What is the probability that Andrew is on the sledge?</p> <p style="text-align: center;">$P = 6 \text{ twelfths} = 1 \text{ half} (= 50\%)$</p> <p style="text-align: right;"><i>45 min</i></p>	<p style="text-align: center;">Notes</p> <p>Individual work, monitored, helped (or whole class activity if time is short)</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>At a good pace</p> <p>Discussion, agreement, self-correcting, praising</p> <p>Ps write answers on scrap paper or 'slates' and show in unison on command.</p> <p>Ps responding correctly explain to others.</p> <p>Praise all contributions.</p> <p>Agreement, praising</p>

<h1>Y3</h1>	<p>R: Calculation C: Numbers up to 1000 E: Quantities up to 1000</p>	<h2>Lesson Plan 169</h2>																									
<p>Activity 1</p>	<p>Building a cube Let's build a cube with edges 10 units (cm) using these unit cubes.</p> <p>How many cubes will be in each row? (10) T makes one in front of Ps. (Ps make on desks.)</p> <p>How many rows will be in each layer? (10) T has one already prepared. (Ps make on desks)</p> <p>How many layers will there be? (10) T shows finished cube. Ps hold up their cubes. Who can write a multiplication about it? Who agrees? Who thinks something else? BB: $10 \times 10 \times 10 = 100 \times 10 = 1000$ cubes. How many edges (vertices, faces) does it have? (12, 8, 6) What shape is each face? (a square)</p>  <p style="text-align: right;">5 min</p>	<p>Notes</p> <p>Whole class activity T has already prepared rows, layers and a finished 10 cm cube from multilink cubes. (If possible, Ps have multilink cubes on desks and work in pairs to make the cube too, or build with Cuisenaire rods.)</p> <p>Praising Reasoning, agreement, praising Ps come out to point to an edge, vertex, face</p>																									
<p>2</p>	<p>Place value How many unit cubes are shown? Let's write it in the place value table.</p> <p>BB:</p>  <table border="1" data-bbox="885 1064 1061 1153"> <thead> <tr> <th>Th</th> <th>H</th> <th>T</th> <th>U</th> </tr> </thead> <tbody> <tr> <td>2</td> <td>3</td> <td>2</td> <td>4</td> </tr> </tbody> </table> <p>In what other ways could we write the number? e.g.</p> <p>BB: 2 thousands + 3 hundreds + 2 tens + 4 units $2\text{Th} + 3\text{H} + 2\text{T} + 4\text{U}$ $2 \times 1000 + 3 \times 100 + 2 \times 10 + 4 \times 1 = 2324$ Two thousand, 3 hundred and twenty four (MMCCCXXIV)</p> <p style="text-align: right;">8 min</p>	Th	H	T	U	2	3	2	4	<p>Whole class activity T has real models already prepared or drawn on BB or use enlarged copy master or OHP.</p> <p>Ps come to BB to count and write the digits, then to write the number in other ways. Class points out errors. Agreement, praising Ps write the table and different forms in their Ex. Bks. Extra praise if a P thinks of using Roman numerals!</p>																	
Th	H	T	U																								
2	3	2	4																								
<p>3</p> <p>Extension</p>	<p>Money How much is in each pile? Ps come to BB to say the amount and write a multiplication about it. Class agrees/disagrees.</p> <p>BB:</p> <table border="0" data-bbox="351 1668 997 1982"> <tr> <td></td> <td>$1 \times 1000 = 1000$</td> <td></td> <td></td> <td>$6 \times 1000 = 6000$</td> </tr> <tr> <td></td> <td>$2 \times 1000 = 2000$</td> <td></td> <td></td> <td>$7 \times 1000 = 7000$</td> </tr> <tr> <td></td> <td>$3 \times 1000 = 3000$</td> <td></td> <td></td> <td>$8 \times 1000 = 8000$</td> </tr> <tr> <td></td> <td>$4 \times 1000 = 4000$</td> <td></td> <td></td> <td>$9 \times 1000 = 9000$</td> </tr> <tr> <td></td> <td>$5 \times 1000 = 5000$</td> <td></td> <td></td> <td>$10 \times 1000 = 10\,000$</td> </tr> </table> <p>If this was real money, what unit could it be? (Cannot be £s as largest banknote is £50. T talks about countries which use 1000, 5000 and 10 000 unit bank notes. If possible, T could have notes/coins to show.)</p> <p style="text-align: right;">13 min</p>		$1 \times 1000 = 1000$			$6 \times 1000 = 6000$		$2 \times 1000 = 2000$			$7 \times 1000 = 7000$		$3 \times 1000 = 3000$			$8 \times 1000 = 8000$		$4 \times 1000 = 4000$			$9 \times 1000 = 9000$		$5 \times 1000 = 5000$			$10 \times 1000 = 10\,000$	<p>Whole class activity Amounts drawn or stuck on BB or use enlarged copy master or OHP</p> <p>Ps write the operations in Ex. Bks as they are dealt with. Reasoning, agreement, praising T points to an amount and class reads it in unison.</p> <p>Discussion, demonstration T (Ps) could tell of own experiences on holiday abroad.</p>
	$1 \times 1000 = 1000$			$6 \times 1000 = 6000$

	$3 \times 1000 = 3000$			$8 \times 1000 = 8000$																							
	$4 \times 1000 = 4000$			$9 \times 1000 = 9000$																							
	$5 \times 1000 = 5000$			$10 \times 1000 = 10\,000$																							

Y3

Lesson Plan 169

Activity

4

PbY3b, page 169

Q.1 Read: *Which numbers do the pictures show?*
Write them in the place-value table.

Do part a) with whole class first to show Ps what to do.
Then Ps do parts b) and c) in *Pbs*. Review at BB with whole class.
Ps come out to BB or dictate to T. Class agrees/disagrees.
Mistakes discussed and corrected.

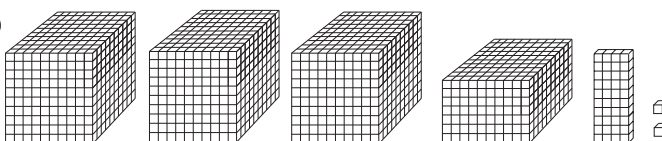

How can we write each number using multiplication and addition? Ps come to BB. Class points out errors.

BB: $3742 = 3 \times 1000 + 7 \times 100 + 4 \times 10 + 2 \times 1$
 $5474 = 5 \times 1000 + 4 \times 100 + 7 \times 10 + 4 \times 1$
 $6426 = 6 \times 1000 + 4 \times 100 + 2 \times 10 + 6 \times 1$

Extension

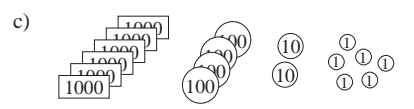

If Ps wish, calculate the total amount. Ps come to BB to do the additions, explaining reasoning in detail. Discuss what do with the 15 thousand. (Add another column – TTh = ten thousand)
T reads total and class repeats it: 'fifteen thousand, six hundred and forty-two'

Solution:

a) 

b) 

Th	H	T	U
3	7	4	2

c) 

Th	H	T	U	
3	7	4	2	
5	4	7	4	
6	4	2	6	
1	5	6	4	2
	1	1	1	

20 min

Notes

Whole class activity to start
Drawn (stuck) on BB or use enlarged copy master or OHP
Ps come to BB to reason and write the numbers.

Individual work, monitored, helped

Discussion, reasoning agreement, self-correcting, praising

At a good pace

Whole class activity

Discussion, reasoning, checking, agreement, praising

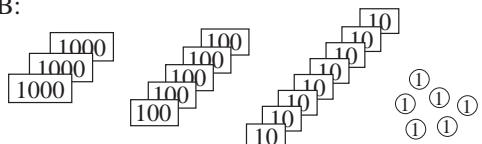

In unison

5

4-digit numbers

a) Who can write the number shown by the pictures? (3586)
Let's write it in different ways. T starts a row and Ps come to BB to complete it. Ps write the different forms in their *Ex. Bks* too.

BB:

Th	H	T	U
3	5	8	6

$3000 + 500 + 80 + 6$
 $= 3 \times 1000 + 5 \times 100 + 8 \times 10 + 6 \times 1$
 $= 3\text{Th} + 5\text{H} + 8\text{T} + 6\text{U}$
 $= \underline{3586}$

T asks several Ps to read out the number. T points to a digit and Ps say its place value.

Whole class activity

Drawn (stuck) on BB or use enlarged copy master or OHP

At a good pace

Discussion, agreement, correcting, praising

Feedback for T

Y3

Lesson Plan 169

Activity

5

(Continued)

b) Let's do these additions. Ps come to BB to write the results.
Class points out errors.

BB: e.g.

$$1000 + 400 + 30 + 5 = (1435) \quad 1000 + 800 + 3 = (1803)$$

$$6000 + 400 + 30 + 5 = (6435) \quad 5000 + 800 + 3 = (5803)$$

$$1000 + 70 + 8 = (1078) \quad 1000 + 400 + 60 = (1460)$$

$$9000 + 70 + 8 = (9078) \quad 7000 + 400 + 60 = (7460)$$

Let's write one or two of them in a place-value table. Ps choose the numbers and dictate to T or come to BB. Class agrees/disagrees.

T (or P) points to a digit, Ps say its value in unison.

25 min

Notes

Whole class activity

T has BB or SB or OHT already prepared.

At a good pace

Ps say the whole addition while writing the numbers.

Agreement, praising

e.g. BB:

Th	H	T	U
1	4	3	5
9	0	7	8
5	8	0	3

6

Number line 1

a) Study these number lines. What numbers should be below the dots?

Ps come to BB to say and write the number. Class points out errors.

BB:

b) T says a number and Ps come to BB to show roughly where it would be on the appropriate number line. Class agrees/disagrees.

e.g. 8.5, 67, 320, 5800, 8326 ($\approx 8330 \approx 8300$)

c) Let's join up the the numbers to the correct point on the number line.

Ps come to BB to choose a number and point to where it should be on the number line. Class agrees/disagrees. T draws the joining line.

BB:

31 min

Whole class activity

Drawn on BB or use enlarged copy master or OHT

At a good pace

T might need to help with writing numbers on the 'thousands' number line.

Agreement, praising

Agreement, praising

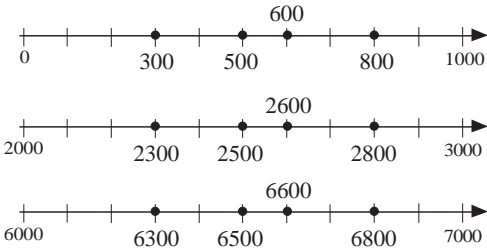

T or class helps with difficult numbers (by approximating).

Drawn on BB or use enlarged copy master or OHT

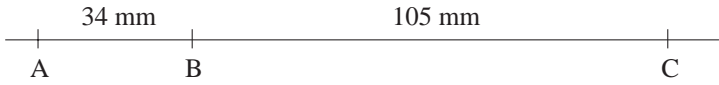

At a good pace

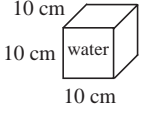

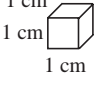

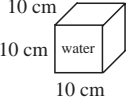

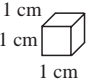

Agreement, praising

Continue with other numbers (suggested by Ps) if time.

Y3		<i>Lesson Plan</i> 170
<i>Activity</i>	Tables practice. Revision, activities, consolidation <i>PbY3b, page 170</i>	<i>Notes</i>

<h1>Y3</h1>	R: Calculation C: Revision: Quantities (length, capacity, mass) E: Problems. Numbers up to 10 000	<h2>Lesson Plan 171</h2>
Activity 1	Measuring Listen carefully and follow my instructions. a) Draw a long, straight, horizontal line with your ruler. b) Draw a short vertical line on the LHS of your line and label it A. c) Measure 34 mm to the right of A and mark that point B. d) Measure 10 and a half cm to the right of B and mark that point C. e) Calculate the distance from A to C. Check it by measuring. Ps show result on scrap paper or slates on command. P who answered correctly explains to those who did not. BB:  <div style="text-align: right;">5 min</div>	Notes Individual work, monitored, helped, corrected Ps have sheets of plain paper and rulers on desks. T reads and repeats each instruction while walking round class. Reasoning, agreement, self-correcting, praising T (or P) draws diagram on BB to demonstrate solution. BB: $AC = AB + BC$ $= 34 \text{ mm} + 105 \text{ mm}$ $= 139 \text{ mm}$ $= \underline{13 \text{ cm } 9 \text{ mm}}$
2	Revision of Length Let's list the units of length in increasing order. Ps dictate to T. Elicit the relationship between them. BB: $1 \text{ mm} < 1 \text{ cm} < 1 \text{ m} < 1 \text{ km}$ $\quad \quad \times 10 \quad \times 100 \quad \times 1000$ Let's fill in the missing numbers. Ps come to BB. Class agrees/disagrees. BB: $1 \text{ km} = \boxed{1000} \text{ m}$ $1 \text{ m} = \boxed{100} \text{ cm} = \boxed{1000} \text{ mm}$ Ps suggest places which are approximately 1 km away from school. Ps suggest items in the classroom which measure 1 m (1 cm, 1 mm) or demonstrate with hands/arms/fingers. Class agrees/disagrees. <div style="text-align: right;">8 min</div>	Whole class activity Agreement, praising T has BB or SB or OHT already prepared. At a good pace Discussion, agreement, checking, praising T has places (items) already in mind. In good humour!
3	PbY3b, page 171 Q.1 Read: <i>Fill in the missing numbers.</i> Deal with one part at a time if necessary. Set a time limit. Review at BB with whole class. Ps dictate to T. Mistakes discussed and corrected. Details written on BB if problems. Solution: a) i) $1 \text{ km} = \underline{1000} \text{ m}$ ii) $1 \text{ km } 564 \text{ m} = \underline{1564} \text{ m}$ iii) $2 \text{ km} = \underline{2000} \text{ m}$ iv) $4 \text{ km } 105 \text{ m} = \underline{4105} \text{ m}$ v) $7 \text{ km} = \underline{7000} \text{ m}$ vi) $8 \text{ km } 16 \text{ m} = \underline{8016} \text{ m}$ b) i) $1 \text{ m} = \underline{1000} \text{ mm}$ ii) $1 \text{ m } 45 \text{ cm} = \underline{145} \text{ cm } \underline{0} \text{ mm}$ iii) $5 \text{ m} = \underline{5000} \text{ mm}$ iv) $3 \text{ m } 70 \text{ cm } 2 \text{ mm} = \underline{3702} \text{ mm}$ v) $8 \text{ m} = \underline{8000} \text{ mm}$ vi) $5 \text{ m } 6 \text{ cm } 3 \text{ mm} = \underline{5063} \text{ mm}$ <div style="text-align: right;">13 min</div>	Individual work, monitored, helped T has BB or SB or OHT already prepared. Reasoning, agreement, self-correction, praising Details, e.g. $8 \text{ km } 16 \text{ m} = 8000 \text{ m} + 16 \text{ m}$ $\quad \quad \quad = \underline{8016 \text{ m}}$ Feedback for T
4	Mental practice a) T says a length. Ps say it in mm. Class points out errors. e.g. 17 cm (170 mm), 420 cm (4200 mm), 4 cm 50 mm (90 mm), etc. b) T says a length in mm. Ps change it to other units. e.g. 353 mm (35 cm 3 mm), 240 mm (24 cm 0 mm), 1258 mm (125 cm 8 mm or 1 m 25 cm 8 mm), 9001 mm (900 cm 1 mm or 9 m 1 mm) <div style="text-align: right;">17 min</div>	Whole class activity T chooses Ps at random At speed. In good humour! Agreement, praising Details written on BB if necessary. Feedback for T

<h1>Y3</h1>		<p><i>Lesson Plan 171</i></p>
<p>Activity</p> <p>5</p>	<p>Revision of Mass</p> <p>Let's list the units of mass (weight) in increasing order. Ps dictate to T. Elicit the relationship between them.</p> <p>BB: $1\text{ g} < 1\text{ kg} < 1\text{ tonne}$ $\times 1000 \quad \times 1000$</p> <p>Let's fill in the missing numbers. Ps come to BB. Class agrees/disagrees.</p> <p>BB: $1\text{ kg} = \boxed{1000}\text{ g}$ $1\text{ tonne} = \boxed{1000}\text{ kg}$</p> <p>Remind Ps of their relationship to units of length. If a glass cube with edges 10 cm (1 cm) is filled with water, the water it contains weighs 1 kg (1 g), or has mass 1 kg (1 g)</p> <p>BB:  $\rightarrow 1\text{ kg}$  $\rightarrow 1\text{ g}$</p> <p>Ps suggest instances when each unit of mass would be used (or T suggests items and Ps say what unit they would use to measure their mass, e.g. feather, elephant, grapes, potatoes, sweets, etc.)</p> <p style="text-align: right;"><i>21 min</i></p>	<p>Notes</p> <p>Whole class activity Agreement, praising T might need to remind Ps about a tonne.</p> <p>Agreement, praising T has BB or SB or OHT already prepared. Discussion. Allow Ps to explain if they can. Agreement, praising.</p> <p>In good humour! T could have 1 g and 1 kg weights for Ps to hold.</p>
<p>6</p>	<p>PbY3b, page 171</p> <p>Q.2 Read: <i>Change the weights to the given units.</i></p> <p>Deal with one part at a time if necessary. Set a time limit. Review at BB with whole class. Ps dictate to T. Mistakes discussed and corrected. Details written on BB if problems.</p> <p><i>Solution:</i></p> <p>a) $1028\text{ g} = \underline{1\text{ kg } 28\text{ g}}$ b) $1\text{ kg } 26\text{ g} = \underline{1026\text{ g}}$ $2300\text{ g} = \underline{2\text{ kg } 300\text{ g}}$ $3\text{ kg } 157\text{ g} = \underline{3157\text{ g}}$ $3005\text{ g} = \underline{3\text{ kg } 5\text{ g}}$ $8\text{ kg } 60\text{ g} = \underline{8060\text{ g}}$ $416\text{ g} = \underline{0\text{ kg } 416\text{ g}}$ $9\text{ kg } 2\text{ g} = \underline{9002\text{ g}}$</p> <p style="text-align: right;"><i>25 min</i></p>	<p>Individual work, monitored, helped T has BB or SB or OHT already prepared. Reasoning, agreement, self-correction, praising. Details, e.g. $9\text{ kg } 2\text{ g} = 9000\text{ g} + 2\text{ g}$ $= \underline{9002\text{ g}}$</p> <p>Feedback for T</p>
<p>7</p>	<p>Revision of Capacity</p> <p>What is capacity? (How much liquid a container can hold.) Let's list the units of capacity in increasing order. Ps dictate to T. Elicit the relationship between them. Remind Ps of their relationship to units of length.</p> <p>BB: $1\text{ ml} < 1\text{ cl} < 1\text{ litre}$ $\times 10 \quad \times 100$  $\rightarrow 1\text{ litre}$  $\rightarrow 1\text{ ml}$</p> <p>Let's fill in the missing numbers. Ps come to BB. Class agrees/disagrees.</p> <p>BB: $1\text{ litre} = \boxed{100}\text{ cl}$ $1\text{ cl} = \boxed{10}\text{ ml}$ $1\text{ litre} = \boxed{1000}\text{ ml}$</p> <p>Ps suggest instances when each unit would be used (or T has containers of various sizes and Ps say which units they would use to measure their capacity, e.g. medicine spoon, egg cup, glass, cup, jug, bottle, bucket, etc.)</p> <p style="text-align: right;"><i>28 min</i></p>	<p>Whole class activity Agreement, praising Allow Ps to explain if they can.</p> <p>Agreement, praising</p> <p>T has BB or SB or OHT already prepared. At a good pace Discussion, agreement, praising. Feedback for T</p>

Y3		<i>Lesson Plan 171</i>																														
Activity 8	<p>PbY3b, page 171</p> <p>Q.3 Read: <i>Change the capacities to the the given units.</i></p> <p>Elicit that the 'l' means 'litre'. Set a time limit.</p> <p>Review at BB with whole class. Ps dictate to T. Mistakes discussed and corrected. Details written on BB if problems.</p> <p><i>Solution:</i></p> <p>a) 75 cl = <u>750</u> ml b) 736 ml = <u>73</u> cl <u>6</u> ml 138 cl = <u>1380</u> ml 502 ml = <u>50</u> cl <u>2</u> ml 205 cl = <u>2050</u> ml 1028 ml = <u>102</u> cl <u>8</u> ml 3 l 26 cl = <u>3260</u> ml 4342 ml = <u>434</u> cl <u>2</u> ml</p> <p style="text-align: right;">32 min</p>	<p style="text-align: center;">Notes</p> <p>Individual work, monitored, helped</p> <p>T has BB or SB or OHT already prepared.</p> <p>Reasoning, agreement, self-correction, praising.</p> <p>Who can give some of the capacities in other ways? e.g.</p> <p>a) 138 cl = 1 litre 38 cl 105 cl = 1 litre 5 cl</p> <p>b) 1028 ml = 1 litre 2 cl 8 ml 4342 ml = 4 litres 34 cl 2 ml</p>																														
9	<p>Pby3b, page 171, Q.4</p> <p>Read: <i>What is the capacity of the container if we could fill it with:</i></p> <p>a) <i>forty 65 cl jugs of water</i> b) <i>sixteen 8 litre buckets of water</i> c) <i>six hundred and forty 5 cl glasses?</i></p> <p>Deal with one part at a time. Ps come to BB to write the operations and do the calculations, explaining reasoning in detail. Class agrees/ disagrees. Ps give answer in a sentence.</p> <p>BB: e.g.</p> <p>a) $65 \text{ cl} \times 40 = 650 \text{ cl} \times 4 = 2600 \text{ cl}$ <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td>6</td><td>5</td><td>0</td><td>×</td><td>4</td></tr><tr><td>2</td><td>6</td><td>0</td><td>0</td><td></td></tr><tr><td colspan="5" style="text-align: center;">2</td></tr></table> = <u>26 litres</u></p> <p><i>Answer:</i> The capacity is 26 litres.</p> <p>b) $8 \text{ litres} \times 16 = 80 \text{ litres} + 48 \text{ litres} = \underline{128 \text{ litres}}$ <i>Answer:</i> The capacity is 128 litres.</p> <p>c) $5 \text{ cl} \times 640 = 10 \text{ cl} \times 320 = 3200 \text{ cl}$ or <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td>6</td><td>4</td><td>0</td><td>×</td><td>5</td></tr><tr><td>3</td><td>2</td><td>0</td><td>0</td><td></td></tr><tr><td colspan="5" style="text-align: center;">2</td></tr></table> = <u>32 litres</u></p> <p><i>Answer:</i> The capacity is 32 litres.</p> <p style="text-align: right;">36 min</p>	6	5	0	×	4	2	6	0	0		2					6	4	0	×	5	3	2	0	0		2					<p>Whole clas activity (or individual work if Ps prefer)</p> <p>At a good pace</p> <p>Reasoning, agreement, praising</p> <p>Accept any correct method of calculation.</p> <p>e.g. $650 \times 4 = 2400 + 200 = 2600 \text{ (cl)}$</p>

 E: *Number systems – preparation*

Lesson Plan 172

Activity

1

Base 9

Let's play a game. Let's see how clever you are!

In *Tenland* they count like us in tens and they have these money units.
 In *Nineland*, they count in nines. What units do you think will be used?

BB: Tenland

①	10	100	1000
	10×10	$10 \times 10 \times 10$	

Nineland

①	9	81	729
	9×9	$9 \times 9 \times 9$	

Let's exchange the amounts in the tables. Ps come to BB to choose an amount and to write it using the other set of money units, explaining reasoning. (Ps can do any necessary calculations in *Ex. Bks.*) Class agrees/disagrees. Elicit the possible digits in each case.

BB:

Tenland

1000	100	10	①
			7
			8
			9
		(1 0)	
		1 1	
		2 7	
		(3 0)	
		1 0 0	
		* 1 2 1	
		(7 3 0)	
		(7 5 5)	

Nineland

729	81	9	①
			(7)
			(8)
		(1 0)	
		1 1	
		(1 2)	
		(3 0)	
		3 3	
		(1 2 1)	
		(1 4 4)	
		1 0 0 1	*
		1 0 2 8	*

729
 18
 + 8

 755

10 digits: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9

9 digits: 0, 1, 2, 3, 4, 5, 6, 7, 8

8 min

* Optional

Notes

Whole class activity

T has 'unit' cards already prepared.

T sticks 10-units on BB.

Ps predict what the 9-units will be before T sticks on BB.

Tables drawn on BB or use enlarged copy master or OHP.

At a good pace

Reasoning, agreement, praising.

For Ts only!

BB:

$$\begin{aligned}
 9 &= 1 \times 9 + 0 \times 1 = 10_9 \\
 10 &= 1 \times 9 + 1 \times 1 = 11_9 \\
 27 &= 3 \times 9 + 0 \times 1 = 30_9 \\
 30 &= 3 \times 9 + 3 \times 1 = 33_9 \\
 100 &= 1 \times 81 + 2 \times 9 + 1 \times 1 = 121_9 \\
 121 &= 1 \times 81 + 4 \times 9 + 4 \times 1 = 144_9 \\
 730 &= 1 \times 729 + 0 \times 81 + 0 \times 9 + 1 \times 1 = 1001_9 \\
 755 &= 1 \times 729 + 0 \times 81 + 2 \times 9 + 8 \times 1 = 1028_9
 \end{aligned}$$

2

Base 2 (Binary)

In *Twoland*, they count in twos. What units do you think will be used?

BB: Twoland

①	2	4	8	16	32	64	128	256	...
	2×2	$2 \times 2 \times 2$	$2 \times 2 \times 2 \times 2$

Let's exchange the amounts in the tables. Ps come to BB to choose an amount and to write it using the other set of money units, explaining reasoning. (Ps can do any necessary calculations in *Ex. Bks.*) Class agrees/disagrees. What do you notice? (Only 2 possible digits)

BB:

Tenland

1000	100	10	①
			1
			2
			3
			4
			(5)
			(9)
		1 5	
		(1 6)	
		(3 0)	
	2	9	7

Twoland

256	128	64	32	16	8	4	2	①
								(1)
							(1 0)	
							(1 1)	
						(1 0 0)		
						1 0 1		
						1 0 0 1		
						(1 1 1 1)		
						1 0 0 0 0		
						1 1 1 1 0		
						1 0 0 0 1		*
						1 0 0 0 1		*

Only 2 digits: 0, 1

* Optional

Whole class activity

T has 'unit' cards already prepared.

Ps predict what the 2-units will be before T sticks on BB.

Tables drawn on BB or use enlarged copy master or OHP.

At a good pace

Reasoning, agreement, praising.

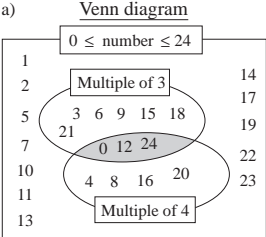

For Ts only!

BB:

$$\begin{aligned}
 2 &= 1 \times 2 + 0 \times 1 = 10_2 \\
 3 &= 1 \times 2 + 1 \times 1 = 11_2 \\
 4 &= 1 \times 4 + 0 \times 2 + 0 \times 1 = 100_2 \\
 5 &= 1 \times 4 + 0 \times 2 + 1 \times 1 = 101_2 \\
 9 &= 1 \times 8 + 0 \times 4 + 0 \times 2 + 1 \times 1 = 1001_2
 \end{aligned}$$

Ps write a *Twoland* number in bottom row and exchange it.

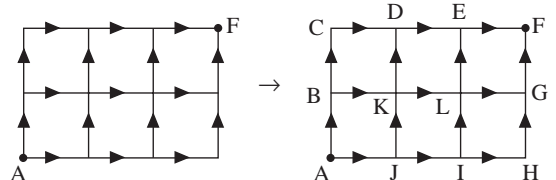

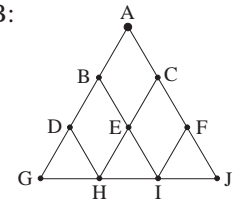

16 min

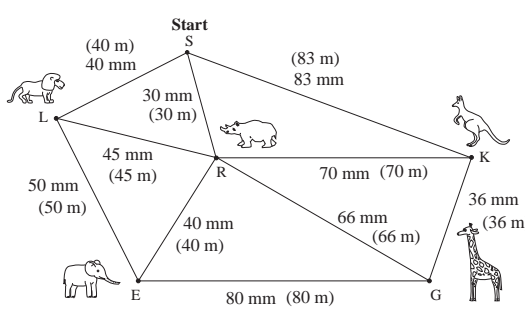

<h1>Y3</h1>		<h2>Lesson Plan 172</h2>																																																
<p>Activity</p> <p style="text-align: center;">3</p>	<p>Other bases</p> <p>A pupil at a school in one of the 'Numberlands' wrote this in a letter:</p> <p>BB: <i>I am 111 years old and I am in class 11A.</i></p> <p>Which Land could he live in? Twoland? Threeland? Let's investigate. How could we do it? (Try out the digits in different Numberlands, then work out their value so that we can compare them more easily) Let's do it logically. Which land shall we start in? (e.g. <i>Twoland</i>)</p> <p>T writes labels above the place-value tables and Ps dictate what the headings should be. Ps come to BB to write the two sets of digits in the correct columns and then to write the values beside the arrows.</p> <p>Discuss which 'Numberland' is most realistic. e.g.</p> <p>If the letter comes from</p> <p><i>Twoland:</i> the pupil is 7 years old and is in class 3A ✓</p> <p><i>Threeland:</i> the pupil is 13 years old and is in class 4A ?</p> <p><i>Fourland:</i> the pupil is 21 years old and is in class 5A ✗</p> <p><i>Fiveland:</i> the pupil is 31 years old and is in class 6A ✗</p> <p><i>Sixland:</i> the pupil is 43 years old and is in class 7A ✗</p> <p><i>Sevenland:</i> the pupil is 57 years old and is in class 8A ✗</p> <p><i>Eightland:</i> the pupil is 73 years old and is in class 9A ✗</p> <p><i>Nineland:</i> the pupil is 91 years old and is in class 10A ✗</p> <p><i>Tenland:</i> the pupil is 111 years old and is in class 11A ✗</p> <p>N.B. Continue only as far as Ps want to! (Ps could have copies of copy master on desks if they wish.)</p> <p>Agree that <i>Twoland</i> is probably the most realistic.</p> <p style="text-align: right;">20 min</p>	<p style="text-align: center;">Notes</p> <p>Whole class activity</p> <p>T has BB already prepared.</p> <p>Discussion on method of solution.</p> <p>Involve several Ps.</p> <p>Tables drawn on BB or use enlarged copy master or OHP</p> <p>At a good pace</p> <p>BB: Twoland</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr><td>8</td><td>4</td><td>2</td><td>1</td></tr> <tr><td></td><td>1</td><td>1</td><td>1</td></tr> <tr><td></td><td></td><td>1</td><td>1</td></tr> </table> <p style="text-align: right;">→ 7 → 3</p> <p style="text-align: center;">Threeland</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr><td>27</td><td>9</td><td>3</td><td>1</td></tr> <tr><td></td><td>1</td><td>1</td><td>1</td></tr> <tr><td></td><td></td><td>1</td><td>1</td></tr> </table> <p style="text-align: right;">→ 13 → 4</p> <p style="text-align: center;">Fourland</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr><td>64</td><td>16</td><td>4</td><td>1</td></tr> <tr><td></td><td>1</td><td>1</td><td>1</td></tr> <tr><td></td><td></td><td>1</td><td>1</td></tr> </table> <p style="text-align: right;">→ 21 → 5</p> <p style="text-align: center;">Fiveland</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr><td>125</td><td>25</td><td>5</td><td>1</td></tr> <tr><td></td><td>1</td><td>1</td><td>1</td></tr> <tr><td></td><td></td><td>1</td><td>1</td></tr> </table> <p style="text-align: right;">→ 31 → 6</p> <p style="text-align: center;">etc.</p>	8	4	2	1		1	1	1			1	1	27	9	3	1		1	1	1			1	1	64	16	4	1		1	1	1			1	1	125	25	5	1		1	1	1			1	1

<p>Y3</p>		<p><i>Lesson Plan 173</i></p>
<p>Activity</p> <p>4</p>	<p>Puzzle</p> <p>In how many ways can Andrew get from his house to Frank's house? He has to cycle along the roads as there are no shortcuts.</p> <p>The roads in their area are a one-way system, so Andrew can only cycle in the direction shown by the arrows.</p> <p>How can we solve it? Ps suggest ways. (e.g. colour over each route in a different colour, or label each crossroads or vertex.) Let's label the crossroads on this diagram. Ps suggest the letters. e.g.</p> <p>BB:</p>  <p>Copy the diagram in your <i>Ex. Bks</i> and see how many different routes you can find.</p> <p>Review at BB with whole class. X, which routes did you find? Who found the same? Who found others? P dictates to T or come to BB.</p> <p>T shows any routes not covered. Agree that there are 10 possible routes and that each route is 5 'units' long (2 units up and 3 units across but in different combinations).</p> <p style="text-align: right;">25 min</p>	<p>Notes</p> <p>Whole class discussion on strategy, then individual (or paired) trial, monitored, helped</p> <p>Grid drawn on BB or use enlarged copy master or OHP</p> <p>Use names of Ps in class.</p> <p>Use a 2 by 2 grid first if Ps are not very able.</p> <p>Set a time limit.</p> <p>Discussion, agreement, self-correcting, praising</p> <p>BB: <u>Possible routes</u></p> <p>ACF, ABGF, ABKDF, ABLEF, AHF, AJDF, AJKGF, AJKLEF, AIEF, AILGF</p>
<p>5</p>	<p>PbY3b, page 173</p> <p>Q.4 Read: <i>How many routes lead from A to G, H I and J if you can only move down to the left or to the right? Write the letters of each route in order.</i></p> <p>Let's see how many ways you can find in 3 minutes!</p> <p>Review a BB with whole class. Ps dictate to T. Class agrees/ disagrees. Omissions added and mistakes corrected.</p> <p><i>Solution:</i></p> <p>A to G: 1 route (ABDG)</p> <p>A to H: 3 routes (ABDH, ABEH, ACEH)</p> <p>A to I: 3 routes (ACFI, ACEI, ABEI)</p> <p>A to J: 1 route (ACFJ)</p> <p style="text-align: right;">30 min</p>	<p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Discussion at BB</p> <p>Agreement, praising</p> <p>BB:</p> 
<p>6</p>	<p>Probability</p> <p>We know that there are 400 pupils in a school. Which of these statements is Certain, Possible but not certain, or Impossible?</p> <p>a) <i>There are at least 2 pupils whose birthday is on the first of January.</i> Show me . . . now! (P) (There could be 0, 1, 2, 3, . . . pupils with birthdays on 1st January, so it is possible.)</p> <p>b) <i>There are 2 pupils whose birthdays are on the same day.</i> Show me . . . now! (C) (365 days in a year, so 365 Ps could have different birthdays but the 366th <u>must</u> be the same as another P.)</p> <p>c) <i>Each P has a different birthday.</i> Show me . . . now! (I) (400 Ps but only 365 days in a year)</p> <p style="text-align: right;">35 min</p>	<p>Whole class activity</p> <p>Ps write 'C', 'P' or 'I' on scrap paper or slates or have flash cards on desks, or use pre-agreed actions.</p> <p>Responses shown in unison</p> <p>Ps responding correctly explain reasoning to class.</p> <p>T repeats unclear reasoning in a more precise way if necessary</p> <p>Agreement, praising. In good humour!</p>

<h1 style="text-align: center;">Y3</h1>		<p><i>Lesson Plan 173</i></p>
<p>Activity</p> <p style="text-align: center;">7</p>	<p>Problems</p> <p>Listen carefully to the problems. Solve them in your head or make notes in your <i>Ex. Bks.</i> Show me the answer when I say.</p> <p>a) <i>If I add 3 to a quarter of a number, I get half of that number. What is the number?</i></p> <p>Show me . . . now! (12) P responding correctly explains reasoning. (1 quarter + 1 quarter = 1 half, so 3 must be 1 quarter of the number, so the number must be $3 \times 4 = 12$)</p> <p>b) <i>I multiplied 2 by a number, then multiplied the product by the same number and I got 128. What did I multiply by?</i></p> <p>Show me . . . now! (8) P responding correctly explains reasoning. ($2 \times \square \times \square = 128$, $\square \times \square = 128 \div 2 = 64$, $\square = 8$)</p> <p>c) <i>Write the number 2 using 5 1s. Operations and brackets are allowed.</i></p> <p>Show me . . . now! P responding correctly explains reasoning. e.g. $(1 + 1 - 1 + 1) \times 1 = 2$, but other statements possible.</p> <p style="text-align: right;"><i>40 min</i></p>	<p style="text-align: center;">Notes</p> <p>Whole class activity</p> <p>T repeats slowly</p> <p>Responses given in unison</p> <p>Reasoning, agreement, checking, praising</p> <p><i>Check:</i> $3 + \underline{12} \div 4 = \underline{12} \div 2$ $3 + 3 = \underline{6}$</p> <p>Accept trial and error methods but stress logical reasoning.</p> <p><i>Check:</i> $2 \times 8 \times 8 = 2 \times 64 = \underline{128}$</p> <p>Deal with all cases.</p> <p>Class applauds most creative (correct) description.</p>
<p style="text-align: center;">8</p>	<p>PbY3b, page 175</p> <p>Q.2 Read: <i>You are visiting a wildlife park and want to see all the animals. This is a map of the park.</i></p> <p>Set the scene. Talk about the animals, the map and the meaning of the scale. Ps tell of own visits to a zoo or park.</p> <p>T could ask simple questions mentally to reinforce the scale. (What is 10 mm on the map in real life? What would 10 m in real life be on the map?)</p> <p>a) Read: <i>Measure each line on the map and write the length beside it.</i></p> <p>Encourage accurate measuring (to nearest mm).</p> <p>Review at BB with whole class. (Accept ± 1mm.) Ps dictate to T or come to BB.</p> <p>b) Read: <i>Calculate the distances in real life and write in brackets beside the lines.</i></p> <p>Review at BB with whole class. Ps dictate to T. (BB)</p> <p>BB:</p>  <p>We will finish this question another day. You can try it at home before then if you want to.</p> <p style="text-align: right;"><i>45 min</i></p>	<p>Whole class introduction to a 'Travelling Salesman' problem</p> <p>Drawn on BB or use enlarged copy master for demonstration only!</p> <p>Discussion about context.</p> <p>Encourage contributions from several Ps.</p> <p>Individual work in measuring, monitored, corrected</p> <p>Agreement, praising</p> <p>T asks questions about the distances as mental practice. e.g. If you are at the elephant enclosure, what is your shortest route back to the start? (ERS)</p> <p>Activity can be completed in <i>Lesson 175.</i></p>

<h1>Y3</h1>	<p>R: Calculation C: Puzzles E: Challenges</p>	<h2 style="text-align: center;">Lesson Plan 174</h2>
<p>Activity</p> <p>1</p>	<p>True or false?</p> <p>Decide whether the statement is true or false. If it is true, hold your ears and if it is false, clap your hands when I say.</p> <p>I thought of a number. I added 800 and the result was a whole number less than 1000. Are these statements true or false?</p> <p>a) My number is less than 200. Show me . . . now! (True) b) It is certain that my number is less than 199. (False) c) It is certain that my number is 199. (False) d) My number cannot be more than 199. (True) e) My number could be 200. (False)</p> <p style="text-align: right;">5 min</p>	<p>Notes</p> <p>Whole class activity Ps stand up. Ps who respond incorrectly have to sit down. In good humour! Responses shown in unison.</p> <p>Possible, but not certain Possible, but not certain</p> <p>Class applauds Ps still standing.</p>
<p>2</p>	<p>PbY3b, page 174</p> <p>Q.1 Read: <i>Write the missing numbers in the puzzles if the sum of the 3 numbers along each side is 1500.</i></p> <p><i>Choose from these numbers.</i></p> <p>Deal with one part at a time. Set a time limit.</p> <p>Review at BB with whole class. Ps come to BB to write numbers, explaining reasoning. Who agrees? Who thinks something else? etc. Class checks the sums of each line.</p> <p><i>Solution:</i></p> <p>a) 420, 400, 520, 540, 560, 580</p> <p>b) 540, 560, 580, 480, 500, 520, 400, 460</p>  <p style="text-align: right;">13 min</p>	<p>Individual trial first, monitored helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Calculations done mentally</p> <p>Discussion, agreement, checking, self-correcting, praising</p> <p>(or done as a whole class activity)</p>
<p>3</p>	<p>PbY3b, page 174</p> <p>Q.2 Read: <i>Bunny can only escape from the maze by passing through numbers which add up to 1200.</i></p> <p><i>Draw possible paths he could take. Use a different colour for each one.</i></p> <p>Make sure that Ps draw lines to show the paths and do not colour in the boxes as some numbers need to be used more than once! Set a time limit.</p> <p>Review at BB with whole class. Ps come to BB to show their paths. Class keeps a running total of the numbers passed.</p> <p><i>Solution:</i> e.g. $160 + 180 + 270 + 590 = 1200$ $160 + 340 + 340 + 360 = 1200$ $430 + 230 + 240 + 300 = 1200$ $430 + 322 + 240 + 208 = 1200$</p> <p style="text-align: right;">20 min</p>	<p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Discussion, reasoning, checking, agreement, self-correction, praising</p> <p>Feedback for T</p>

Y3		Lesson Plan 174
<p>Activity</p> <p>4</p>	<p>Problem 1</p> <p>Help me to solve this problem.</p> <p><i>There are 4 corners in a room. A cat is sitting in each corner. 3 cats are sitting opposite each cat. On each cat's tail a cat is sitting. What is the least number of cats that could be in the room?</i></p> <p>What should we do first? (Draw a diagram) T and Ps go through the text several times and try to make a drawing.</p> <p>Agree that the least number of cats there could be is 4, as the cats could be sitting on their own tails!</p> <p>BB: </p> <p style="text-align: right;">25 min</p>	<p>Notes</p> <p>Whole class activity</p> <p>Problem written on BB or SB or OHP.</p> <p>Diagram drawn on BB or use cats cut from enlarged copy master, coloured and stuck on BB (or cut from magazines).</p> <p>Discussion, reasoning, agreement, praising</p> <p>In good humour!</p>
<p>5</p>	<p>Problem 2</p> <p>Listen carefully and show me the answer when I say. You can discuss it with your neighbour if you wish.</p> <p><i>In a box there are 10 blue and 20 red pencils. How many pencils will we need to take out of the box with our eyes shut to be certain that we have at least:</i></p> <p>a) <i>a red and a blue pencil?</i> Show me . . . now! (21) (The first 20 pencils might all be red.)</p> <p>b) <i>3 red pencils?</i> Show me . . . now! (13) (The first 10 pencils might all be blue.)</p> <p>c) <i>2 red and 3 blue pencils?</i> Show me . . . now! (23) (The first 20 pencils might all be red.)</p> <p>d) <i>2 pencils the same colour?</i> Show me . . . now! (3) (The first 2 pencils might be different but the 3rd <u>must</u> be red or blue.)</p> <p style="text-align: right;">30 min</p>	<p>Whole class activity</p> <p>T repeats each question slowly to give Ps time to think.</p> <p>Responses written on scrap paper or 'slates' and shown in unison.</p> <p>Ps who responded correctly explain their reasoning to those who did not (with T's help).</p> <p>Reasoning, agreement, praising</p>
<p>6</p>	<p>Problems 3</p> <p>Help me to solve these problems.</p> <p><i>What is the last digit:</i></p> <p>a) <i>of the product of the first 10 positive even numbers?</i></p> <p>Ps suggest what to do. If they want to multiply the 5 even numbers, T encourages them to think of an easier way.</p> <p>BB: $2 \times 4 \times 6 \times 8 \times 10 \times 12 \times 14 \times 16 \times 18 \times 20 = ?$</p> <p>Elicit that <u>any</u> number multiplied by 10 has a units digit of <u>zero</u>!</p> <p>b) <i>of the product of the first 10 positive odd numbers?</i></p> <p>Ps suggest what to do. T helps them to write them on BB, but after the first 3, asks them to think of an easy way.</p> <p>BB: $1 \times 3 \times 5 \times 7 \times 9 \times 11 \times 13 \times 15 \times 17 \times 19 = ?$</p> <p style="text-align: center;">15</p> <p>Once the product has reached 15, the units digit of any following product <u>must</u> be 5, as we are multiplying by odd numbers!</p> <p style="text-align: right;">35 min</p>	<p>Whole class activity</p> <p>Ps suggest how to solve it.</p> <p>T gives hints if necessary.</p> <p>Reasoning, agreement, checking</p> <p>Extra praise if Ps notice these strategies without help.</p>

Y3

Lesson Plan 174

Activity

7

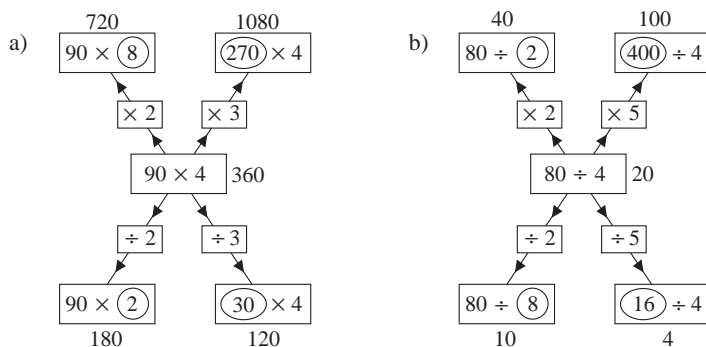

PbY3b, page 174, Q.3

Read: *Fill in the missing numbers.*

T chooses two teams of volunteers. Ps come out one after the other from each team to do a step of their puzzle, explaining reasoning.. T times them with a stop watch

Rest of class checks that they are correct. The team with correct solution or with the quickest time is the winner. Let's give them a clap!

Solution:

40 min

Notes

Whole class activity
(or individual work if Ps wish)

Drawn on BB or use enlarged copy master or OHP

At a good pace

Ps say the whole operation to class as they are writing in the missing numbers.

Reasoning, agreement, correcting, praising

T goes through each solution again quickly, referring to diagrams.

8

PbY3b, page 174

Q.4 Read: *How many triangles can you see in each diagram?*

Set a time limit for a) and b). Review at BB with whole class.

For parts c) and d), T asks several Ps how many triangles they can see. Who agrees? Who thinks there are more? etc.

Ps with correct answer come to BB to point to the triangles. Class agrees/disagrees.

Solution:

For part d), T shows how the counting could be done more easily by redrawing the base of each triangle.

45 min

Parts a) and b) done as individual work, monitored
Parts c) and d) done with the whole class.

Drawn on BB or use enlarged copy master or OHP

Discussion, agreement, praising

Note to :

We are choosing 2 out of 6 possible vertices for each base, but each pair can be reversed, so the number of triangles is

$$\frac{6 \times 5}{1 \times 2} = \frac{30}{2} = 15$$

Y3

**Lesson Plan
175**

Activity

Notes

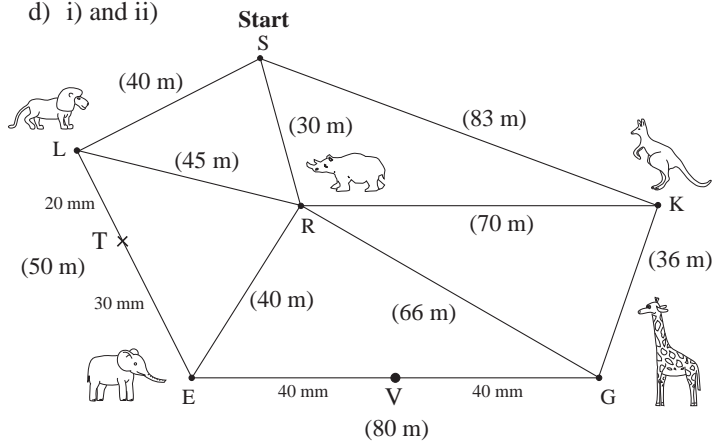

Revision activities, completion of Activity 8 from *Lesson 173*
PbY3b, page 175

Solutions:

- Q.1 a) $18 \text{ cm} = \underline{180} \text{ mm}$ b) $242 \text{ mm} = \underline{24} \text{ cm } \underline{2} \text{ mm}$
 $240 \text{ cm} = \underline{2400} \text{ mm}$ $480 \text{ mm} = \underline{48} \text{ cm } \underline{0} \text{ mm}$
 $5 \text{ cm } 30 \text{ mm} = \underline{80} \text{ mm}$ $1263 \text{ mm} = \underline{126} \text{ cm } \underline{3} \text{ mm}$
 (= 1 m 26 cm 3 mm)
 $62 \text{ cm } 9 \text{ mm} = \underline{629} \text{ mm}$ $4004 \text{ mm} = \underline{400} \text{ cm } \underline{4} \text{ mm}$
 (= 4 m 4 mm)

- Q.2 c) i) several solutions possible, e.g. SRLEGKS (324 m).
 ii) SLEGKRS (306 m)

d) i) and ii)

Individual (or paired) work
Solutions discussed with whole class
