Activity

1

Money model

Several countries have larger demonation bank notes than we have in the U.K. (T could explain that their basic units of currency have less value than the £ or pence in the U.K, so they need more of them.)
 Let's complete the missing items. Ps come to BB to explain diagrams and fill in what is missing. Rest of class writes the equations with words and numbers (no need to draw the money) in *Ex. Bks*.

BB:

- a) $\textcircled{1} \textcircled{1} \textcircled{1} \textcircled{1} \textcircled{1} \textcircled{1} \textcircled{1} \textcircled{1} \textcircled{1} \textcircled{1} \textcircled{1} = \boxed{10}$ 10
Ten
 1 ten = $\boxed{10}$ ones (units)
 $1 \times 10 = 10 \times 1$
- b) $\begin{array}{cccccc} \boxed{10} & \boxed{10} & \boxed{10} & \boxed{10} & \boxed{10} & \\ \boxed{10} & \boxed{10} & \boxed{10} & \boxed{10} & \boxed{10} & \end{array} = \boxed{100}$ 100
Hundred
 1 hundred = 10 **tens** = $\boxed{100}$ units
 $1 \times 100 = 10 \times 10 = 100 \times 1$
- c) $\begin{array}{ccccc} \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} \\ \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} \end{array} = \boxed{1000}$ 1000
Thousand
 1 thousand = $\boxed{10}$ hundreds = $\boxed{100}$ tens = $\boxed{1000}$ units
 $1 \times 1000 = 10 \times \boxed{100} = 100 \times \boxed{10} = 1000 \times \boxed{1}$
- d) $\begin{array}{ccccc} \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} \\ \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} \end{array} = \boxed{10\ 000}$ 10 000
Ten thousand
 1 'ten thousand' = 10 **thousands** = $\boxed{100}$ hundreds = $\boxed{1000}$ tens = $\boxed{10\ 000}$ units
 $1 \times 10\ 000 = \boxed{10} \times 1000 = \boxed{100} \times 100 = \boxed{1000} \times 10 = 10\ 000 \times \boxed{1}$
- e) $\begin{array}{cccccccccccc} \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} & \boxed{1000} \\ \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} & \boxed{100} \end{array}$ 3000
Three thousand
 3 thousand = $\boxed{30}$ hundreds = $\boxed{300}$ tens = $\boxed{3000}$ units
 $3 \times \boxed{1000} = 30 \times \boxed{100} = 300 \times \boxed{10} = 3000 \times \boxed{1}$

10 min

Notes

Whole class activity

BB already prepared with model money drawn or stuck on BB or use enlarged copy master or OHP

At a good pace

Agreement, praising

Feedback for T

T points out that when the number of thousands is 2 digits e.g. 10 thousand: it is usually written with a small space (or a comma) after the Th to make the number easier to read:

BB: 10 000
 ↑
 small space

but no space is left when it is shown in a place value table!

2

Place value

How much is there altogether? Let's write it in different ways.
 Ps come to BB to count how much there is and to write it as digits in the place value table. Class agrees/disagrees.
 Let's write it in other ways. T starts each line and Ps come to BB to continue. Class points out errors. Ps write equations in *Ex. Bks* too.
 BB:

Ten thousands	Thousands	Hundreds	Tens	Units
	$\begin{array}{c} \boxed{1000} \\ \boxed{1000} \\ \boxed{1000} \end{array}$	$\begin{array}{c} \boxed{100} \\ \boxed{100} \\ \boxed{100} \\ \boxed{100} \\ \boxed{100} \end{array}$	$\begin{array}{c} \boxed{10} \\ \boxed{10} \end{array}$	$\begin{array}{c} \textcircled{1} \textcircled{1} \\ \textcircled{1} \textcircled{1} \end{array}$

TTh	Th	H	T	U
	3	5	2	4

$$3524 = 3000 + 500 + 20 + 4$$

$$= 3\text{Th} + 5\text{H} + 2\text{T} + 4\text{U}$$

$$= 3 \times 1000 + 5 \times 100 + 2 \times 10 + 4 \times 1$$

$$= \text{three thousand five hundred and twenty four}$$

15 min

Whole class activity

Drawn on BB or with model money stuck on table, or use enlarged copy master or OHP

Reasoning, agreement, praising

Class reads number in unison.

Y4

Lesson Plan 31

Activity

3

Vocabulary

Let's revise the names of the different kinds of values connected with numbers. First let's read the number on the BB. ('5 thousand, one hundred and seventy eight')

BB:

T points to the row of the table containing the 'thousands, hundreds', etc.

A, what kind of value does this row show? (Place value) Come and write it in the table.

Who can fill in the names missing from the other two boxes? Ps come to BB.

Who agrees? etc.

20 min

Notes

Whole class activity

Drawn on BB or use enlarged copy master or OHP

Number read in unison.

Or Ps stick prepared name cards in correct place on digram.

Agreement, praising

T writes other numbers on BB and points to a digit randomly. What is its digit value (place value, real value)?

Praising, encouragement only

4

Writing numbers

Write these numbers as digits in your *Ex. Bks.*

T dictates some numbers (e.g. 7403) and writes some numbers in words on BB. (e.g. six thousand, four hundred and eighty two)

Review with whole class. Ps come to BB to write as digits. Class agrees/disagrees. P points to a digit and asks what its place (digit, real) value is and chooses another P to answer.

25 min

Individual work, monitored, but class kept together.

Ps can say or write the numbers too!

Agreement, self-correcting, praising

Feedback for T

5

PbY4a, page 31

Q.1 Read: Write each amount in the place-value table and then in the box.

Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

a)

Th	H	T	U
3	6	4	7

3	6	4	7
---	---	---	---

b)

Th	H	T	U
7	0	5	3

7	0	5	3
---	---	---	---

c)

Th	H	T	U
4	6	0	8

4	6	0	8
---	---	---	---

Let's write these numbers in increasing order. Ps dictate to T or come to BB. Let's say the inequality.

28 min

Individual work, monitored, helped

Drawn on BB (or model money stuck to BB) or use enlarged copy master or OHP

Agreement, self-correction, praising.

BB: 3647 < 4608 < 7053
 In unison

6

PbY4a, page 31

Q.2 Read: Write these numbers with words in your exercise book Deal with one row at a time. Review with whole class.

Ps read out what they have written. T uncovers pre-prepared BB or SB or OHT. Class points out errors. Let's write them in increasing (decreasing) order. Ps come to BB or dictate to T.

34 min

Individual work, monitored, helped

Agreement, self-correction of words and spelling, praising

Whole class activity

Y4*Lesson Plan 31***Activity****7****PbY4a, page 31**

Q.3 Read: *Show each number as the sum of thousands, hundreds, tens and units.*

T could do the first number with whole class as a model for Ps to follow if necessary. Set a time limit.

Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

Th	H	T	U	=		+		+		+	
1	6	3	4	=	1 0 0 0	+	6 0 0	+	3 0	+	4
3	4	0	7	=	3 0 0 0	+	4 0 0	+	0	+	7
8	0	2	5	=	8 0 0 0	+	0 0	+	2 0	+	5
7	2	0	5	=	7 0 0 0	+	2 0 0	+	0	+	5
8	0	0	8	=	8 0 0 0	+	0 0	+	0	+	8
6	0	3	0	=	6 0 0 0	+	0 0	+	3 0	+	0

Extension

List the numbers in decreasing order in your *Ex. Bks.*

Review at BB with whole class. Ps dictate to T or come to BB. Class points out errors. Mistakes discussed and corrected.

BB: 8025 > 8008 > 7205 > 6030 > 3407 > 1634

39 min

8**PbY4a, page 31**

Q.4 Read: *Fill in the missing digits.*

Set a time limit. Review at BB with whole class. Ps come to BB or dictate to T. Mistakes discussed and corrected.

Solution:

- a) 2847 = $\boxed{2} \times 1000 + \boxed{8} \times 100 + \boxed{4} \times 10 + \boxed{7} \times 1$
 b) 6570 = $\boxed{6} \times 1000 + \boxed{5} \times 100 + \boxed{7} \times 10 + \boxed{0} \times 1$
 c) 4501 = $\boxed{4} \times 1000 + \boxed{5} \times 100 + \boxed{0} \times 10 + \boxed{1} \times 1$
 d) 6600 = $\boxed{6} \times 1000 + \boxed{6} \times 100 + \boxed{0} \times 10 + \boxed{0} \times 1$
 e) 965 = $\boxed{0} \times 1000 + \boxed{9} \times 100 + \boxed{6} \times 10 + \boxed{5} \times 1$
 f) 4059 = $\boxed{4} \times 1000 + \boxed{0} \times 100 + \boxed{5} \times 10 + \boxed{9} \times 1$
 g) 2874 = $\boxed{2} \times 1000 + \boxed{8} \times 100 + \boxed{7} \times 10 + \boxed{4} \times 1$

Let's say the numbers in increasing order..

965 < 2847 < 2874 < 4059 < 4501 < 6570 < 6600

45 min

Notes

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

Reasoning, agreement, self-correction, praising

T points to a row in the table and Ps say number in unison.

Individual work by the quicker Ps

Agreement, self-correcting, praising

Individual work, monitored, helped

Written on BB or use enlarged copy master or OHP

Differentiation by time limit

Reasoning, agreement, self-correction, praising

Ps recite in unison and T writes on BB.

Y4	R: Place value C: Extending numbers to 10 000. Counting, reading, writing, ordering E: Roman numbers. Sequences	<i>Lesson Plan</i> 32
Activity		Notes
1	<p>Tens, hundreds, thousands</p> <p>Let's list:</p> <p>a) the whole tens between 100 and 200 (110, 120, 130, 140, 150, 160, 170, 180, 190)</p> <p>b) the whole hundreds between 1000 and 2000 (1100, 1200, 1300, 1400, 1500, 1600, 1700, 1800, 1900)</p> <p>c) the whole thousands between 0 and 10 000 [20 000] (1000, 2000, 3000, 4000, 5000, 6000, 7000, 8000, 9000) [10 000, 11 000, 12 000, 13 000, 14 000, . . . , 19 000]</p> <p style="text-align: right;">5 min</p>	<p>Whole class activity</p> <p>Ps dictate numbers to T and T writes them on BB.</p> <p>At a good pace</p> <p>Agreement, praising</p> <p>Continue to 20 000 if Ps want to try it.</p> <p>Feedback for T</p>
2	<p>Numbers</p> <p>Write the natural numbers I am describing in your <i>Ex. Bks.</i> What are natural numbers? (positive, whole numbers: 1, 2, 3, . . .)</p> <p>a) i) The greatest 1-digit number (9) ii) The greatest 2-digit number (99) iii) The greatest 3-digit number (999) iv) The greatest 4-digit number (9999)</p> <p>b) i) The smallest 1-digit number (1) ii) The smallest 2-digit number (10) iii) The smallest 3-digit number (100) iv) The smallest 4-digit number (1000) v) The smallest 5-digit number (10 000)</p> <p>Review orally with whole class after part a) and after part b). Ps dictate numbers and class agrees/disagrees. Mistakes discussed/corrected.</p> <p style="text-align: right;">10 min</p>	<p>Individual work, but class kept together</p> <p>T could have descriptions written on SB or BB or OHT</p> <p>At a good pace</p> <p>Agreement, self-correction, praising</p>
3	<p>Sequence</p> <p>Let's start at 1650 and write the next 9 terms if the terms are increasing by 15. Ps come to BB to write and say a number each. Class points out errors.</p> <p>BB: 1650, 1665, 1680, 1695, 1710, 1725, 1740, 1755, 1770, 1785, 1800</p> <p>Let's write them in Roman numerals. Ps come to BB, explaining reasoning. Class agrees/disagrees.</p> <p>BB: MDCL, MDCLXV, MDCLXXX, MDCXCV, MDCCX, MDCCXXV, MDCCXL, MDCCLV, MDCCLXX, MDCCLXXXV, MDCCC</p> <p style="text-align: right;">15 min</p>	<p>Whole class activity</p> <p>At a good pace</p> <p>Agreement, praising</p> <p>Revise Roman numerals first if necessary.</p> <p>T covers up Arabic numbers, P points to a Roman number and chooses a P to read it.</p>
4	<p>How many digits?</p> <p>How many digits would we write if we wrote down all the natural numbers from:</p> <p>a) 1 to 9 (9)</p> <p>b) 10 to 99 (180) Why do you think so?</p> <p>There are 9 tens (as we do not count 0) and for every ten there are 10 possible units (0 to 9), so there are $9 \times 10 = 90$ 2-digit numbers, so the number of digits we would write is $90 \times 2 = 180$.</p>	<p>Whole class activity</p> <p>Ask several Ps what they think and why. T clarifies Ps' ideas and reasoning if necessary, or gives hints to set Ps thinking if nobody knows.</p> <p>Agreement, praising</p>

Y4		<i>Lesson Plan 32</i>																																																							
Activity 4	(Continued) c) How many 3-digit numbers are there? (900) Why do you think so? There are <u>9</u> hundreds (as we do not use 0) and for every hundred there are 10 possible tens and for every ten there are 10 possible units, so there are $9 \times 10 \times 10 = \underline{900}$ 3-digit numbers. How many digits would we write if we wrote them all down? (900 numbers, 3-digits each, so $900 \times 3 = \underline{2700}$ digits)	Notes Ask several Ps what they think. T helps to clarify reasoning, if necessary. or BB: $\frac{H \quad T \quad U}{9 \times 10 \times 10}$ Agreement, praising																																																							
5	PbY4a, page 32 Q.1 Read: <i>Write the numbers in the place-value table.</i> What does TTh mean? (Ten Thousands) Set a time limit. Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected. Which number is the greatest (smallest)? (9064, 916) <i>Solution:</i> Eight thousand, three hundred and sixty three Nine thousand and sixty four Two thousand, seven hundred and five Six thousand, nine hundred and seventy Nine hundred and sixteen $4 \times 1000 + 3 \times 100 + 8 \times 10 + 7 \times 1$ $2 \times 1000 + 9 \times 100 + 6 \times 10$ $5 \times 1000 + 4 \times 10 + 8 \times 1$ $1 \times 1000 + 5 \times 100 + 4 \times 1$ $8000 + 300 + 40 + 2$ <table border="1" data-bbox="820 981 1059 1339"> <thead> <tr> <th>TTh</th> <th>Th</th> <th>H</th> <th>T</th> <th>U</th> </tr> </thead> <tbody> <tr> <td></td> <td>8</td> <td>3</td> <td>6</td> <td>3</td> </tr> <tr> <td></td> <td>9</td> <td>0</td> <td>6</td> <td>4</td> </tr> <tr> <td></td> <td>2</td> <td>7</td> <td>0</td> <td>5</td> </tr> <tr> <td></td> <td>6</td> <td>9</td> <td>7</td> <td>0</td> </tr> <tr> <td></td> <td></td> <td>9</td> <td>1</td> <td>6</td> </tr> <tr> <td></td> <td>4</td> <td>3</td> <td>8</td> <td>7</td> </tr> <tr> <td></td> <td>2</td> <td>9</td> <td>6</td> <td>0</td> </tr> <tr> <td></td> <td>5</td> <td>0</td> <td>4</td> <td>8</td> </tr> <tr> <td></td> <td>1</td> <td>5</td> <td>0</td> <td>4</td> </tr> <tr> <td></td> <td>8</td> <td>3</td> <td>4</td> <td>2</td> </tr> </tbody> </table> Extension <ul style="list-style-type: none">Write the numbers in decreasing order in your <i>Ex. Ps can work in Pbs too if they wish (and can identify equal values by colouring instead of drawing lines).</p> <p><i>Solution:</i></p>  <p style="text-align: right;">45 min</p>	<p>Whole class activity</p> <p>Written on BB or use enlarged copy master or OHP</p> <p>(or values written on cards and stuck to BB. Ps rearrange them in equal value groups)</p> <p>At a good pace</p> <p>Reasoning, agreement, praising</p> <p>In the case of 4 equal numbers, do not expect all 6 lines to be drawn (indirect connections are sufficient)</p> <p>Extra praise if Ps draw all 6!</p>

<h1>Y4</h1>	<p>R: Mental calculation C: Numbers up to 10 000. Rounding. Number line E: <i>Problems. Divisibility</i></p>	<h2>Lesson Plan 33</h2>
Activity 1	<p>Mental practice</p> <p>How much do I have altogether if I have this amount of money? T sticks or draws model money on BB and Ps show total amount on scrap paper or slates on command. e.g.</p> <p>a) 3 10 s Show me . . . now! (30)</p> <p>b) 3 100 s Show me . . . now! (300)</p> <p>c) 3 1000 s Show me . . . now! (3000)</p> <p>d) 3 500 s Show me . . . now! (1500)</p> <p>Repeat for, e.g. 7 10 s, 7 100 s, 7 1000 s, 7 500 s but this time without using model money. Ps visualise mentally.</p> <p style="text-align: right;"><i>4 min</i></p>	<p style="text-align: center;">Notes</p> <p>Whole class activity</p> <p>At speed</p> <p>Ps who responded correctly explain to those who did not.</p> <p>Agreement, praising</p> <p>Feedback for T</p>
2	<p>Writing numbers</p> <p>a) T dictates numbers and Ps show as digits in unison on command.</p> <p>b) T shows numbers in words (on pre-pared SB or OHT and Ps show as digits in unison on command.</p> <p>c) T describes a number (orally or written on BB) and Ps show as digits in unison on command. e.g.</p> <p>8Th + 3H + 4T + 6U = (8346)</p> <p>2000 + 400 + 20 + 9 = (2429)</p> <p>5 × 1000 + 6 × 100 + 3 × 10 + 2 × 1 = (5632), etc.</p> <p style="text-align: right;"><i>10 min</i></p>	<p>Whole class activity. Responses written on scrap paper or slates. (or individual work in <i>Ex. Bks</i>, or each P has a worksheet for b) and c) prepared by T)</p> <p>At a good pace</p> <p>Agreement, correcting, praising</p> <p>Ps could dictate/write/describe numbers too!</p>
3	<p>Sequences</p> <p>T gives the rule and the first term of a sequence and Ps continue the sequence until T tells them to stop.</p> <p>a) Count down by 10, starting at 6521, (6511, 6501, 6491, 6481, . . .)</p> <p>b) Count up by 50 starting at 4444, (4494, 4544, 4594, 4644, . . .)</p> <p>c) Count up by 1000 starting at 438, (1438, 2438, 3438, 4438, 5438, . . .)</p> <p>d) Count down by 200 starting at 5817, (5617, 5417, 5217, 5017, 4817, . . .)</p> <p style="text-align: right;"><i>15 min</i></p>	<p>Whole class activity</p> <p>At speed in order round class</p> <p>If Ps cannot keep previous term in their head, T writes it on BB.</p> <p>If a P makes a mistake, the next P corrects it.</p> <p>Agreement, praising</p>
4	<p>Number line</p> <p>a) Study the number lines carefully. What numbers are marked by the letters on each number line?</p> <p>Ps come to BB to choose a letter and write the missing number in the box. Class agrees/disagrees.</p> <p>BB: a) </p> <p>b) </p> <p>c) </p> <p>d) </p> <p style="text-align: right;"><i>20 min</i></p>	<p>Whole class activity</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>At a good pace</p> <p>Agreement, correcting, praising</p> <p>b) Ps come to BB to mark a number and class says the number in unison</p> <p>If Ps draw dots <u>between</u> ticks, T asks several Ps what they think the number is. P who drew the dot confirms it.</p>

Y4

Lesson Plan 33

Activity

5

Rounding

Let's find the next smaller and greater whole tens, hundreds and thousands to these numbers. Ps come to BB or dictate to T. Class agrees/disagrees.

If we rounded the number to the nearest 10 (100, 1000) what would it be? T points to each number in turn and class shouts out the rounded value. T highlights it on the BB.

BB:

25 min

Notes

Whole class activity
Written on BB or use enlarged copy master or OHP
At a good pace
Agreement, praising
Elicit that 5 (50, 500) rounds up.

If problems, draw relevant segments of number line on BB.

6

PbY4a, page 33

Q.1 Read: *Which numbers do the letters stand for? Write them in the boxes.*

Talk about the number lines first. Elicit that in all 3 number lines there are small ticks at every 100.

Set a time limit. Review at BB with whole class. Ps come to BB to write missing numbers. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

30 min

Individual work, monitored, helped
Drawn on BB or use enlarged copy master or OHP

Reasoning, agreement, self-correction, praising

What do you notice? (For each letter, the hundreds and tens are the same on each number line; only the thousands are different).

7

PbY4a, page 33

Q.2 Read: *Mark with a dot where each letter should be on the relevant number line.*

Elicit that there is a tick at each unit on both number lines. Ps draw dots and label them with the appropriate letter.

Review at BB with whole class. Ps come to BB to draw (stick on) dots. Class agrees/disagrees. Mistakes discussed and corrected. Elicit similarities between number lines.

Solution:

a = 1965 b = 1992 c = 1999 d = 1981 e = 1983 f = 1965

35 min

Individual work, monitored, helped
Drawn on BB or use enlarged copy master or OHP

Discussion, agreement, self-correction, praising

 E: *Over 10 000*

Lesson Plan 36

Activity

1

Model money

Let's write an operation about each diagram. Ps come to BB to write and say additions and subtractions. Class points out errors.

BB:

a) i)	<table border="1"><tr><th>Had</th><th>Was given</th></tr><tr><td></td><td></td></tr></table>	Had	Was given			ii)	<table border="1"><tr><th>Had</th><th>Was given</th></tr><tr><td></td><td></td></tr></table>	Had	Was given			iii)	<table border="1"><tr><th>Had</th><th>Was given</th></tr><tr><td></td><td></td></tr></table>	Had	Was given		
Had	Was given																
Had	Was given																
Had	Was given																
	$30 + 40 = 70$		$300 + 400 = 700$		$3000 + 4000 = 7000$												
b) i)	<table border="1"><tr><th>Had</th><th>Was given</th></tr><tr><td></td><td></td></tr></table>	Had	Was given			ii)	<table border="1"><tr><th>Had</th><th>Was given</th></tr><tr><td></td><td></td></tr></table>	Had	Was given			iii)	<table border="1"><tr><th>Had</th><th>Was given</th></tr><tr><td></td><td></td></tr></table>	Had	Was given		
Had	Was given																
Had	Was given																
Had	Was given																
	$25 + 40 = 65$		$250 + 400 = 650$		$2500 + 4000 = 6500$												
c) i)	<table border="1"><tr><th>Had</th><th>Spent</th></tr><tr><td></td><td></td></tr></table>	Had	Spent			ii)	<table border="1"><tr><th>Had</th><th>Spent</th></tr><tr><td></td><td></td></tr></table>	Had	Spent			iii)	<table border="1"><tr><th>Had</th><th>Spent</th></tr><tr><td></td><td></td></tr></table>	Had	Spent		
Had	Spent																
Had	Spent																
Had	Spent																
	$50 - 20 = 30$		$500 - 200 = 300$		$5000 - 2000 = 3000$												
d) i)	<table border="1"><tr><th>Had</th><th>Spent</th></tr><tr><td></td><td></td></tr></table>	Had	Spent			ii)	<table border="1"><tr><th>Had</th><th>Spent</th></tr><tr><td></td><td></td></tr></table>	Had	Spent			iii)	<table border="1"><tr><th>Had</th><th>Spent</th></tr><tr><td></td><td></td></tr></table>	Had	Spent		
Had	Spent																
Had	Spent																
Had	Spent																
	$110 - 30 = 80$		$1100 - 300 = 800$		$11\ 000 - 3000 = 8000$												

6 min

2

Vocabulary

T writes an addition and a subtraction on BB. Ps come to BB to write results, explaining reasoning. Class agrees/disagrees.

What names do we give to the different parts of the operations?

Ps come to BB to say and write. Class agrees/disagrees on correct spelling. T helps if necessary.

BB: e.g.

	sum	reductant	difference
	↓	↓	↓
$5700 + 3400 = 9100$		$9300 - 5800 = 3500$	
\swarrow \nearrow terms		\uparrow subtrahend	

Elicit that:

- in addition, the terms can be interchanged,
- in subtraction, the reductant and subtrahend cannot be interchanged.

9 min

3

Problems

Listen carefully to the problem. Are there any missing or unnecessary data? T reads problem aloud twice. Ps suggest the data which are missing or not needed. Class agrees/disagrees.

T reads problem again. Ps note the data, make a plan, do the calculation and write the answer as a sentence in their *Ex. Bks.*

Ps could show numerical part of answer on scrap paper or slates on command. P who responded correctly explains to those who did not. Mistakes discussed and corrected.

Notes

Whole class activity

Drawn on BB, or model money stuck on tables drawn on BB, or use enlarged copy master or OHP

At a good pace

Reasoning, agreement, praising

What do you notice?

Ps point out the similarities among the 3 diagrams in each row.

Feedback for T

Whole class activity

Reasoning, agreement, praising

T covers up names and Ps suggest another addition and subtraction.

T points to a component and class shouts out its name (sum, difference, term, subtrahend, reductant)

e.g. $3 + 2 = 2 + 3$

e.g. $3 - 2 \neq 2 - 3$

Whole class discussion on the data. Agreement, praising

Individual work in *Ex. Bks.*, then whole class review and discussion on solution

(Or all done as a whole class activity, with Ps helping each other to solve the problems at the BB and T intervening only when necessary)

Y4		<i>Lesson Plan 36</i>
<p>Activity</p> <p>3</p>	<p>(Continued)</p> <p>a) <i>There are 240 children at a holiday camp. How many children will there be altogether if another 130 children and 14 adults arrive?</i></p> <p><i>Unnecessary data:</i> Number of adults arriving</p> <p><i>Plan:</i> $240 + 130 = \underline{370}$</p> <p><i>Answer:</i> There will be 370 children altogether.</p> <p>b) <i>The 24 pupils in Class 3 collected 140 kg of chestnuts. The 22 pupils in Class 4 collected 150 kg of chestnuts. How many kg of chestnuts did the two classes collect altogether?</i></p> <p><i>Unnecessary data:</i> Number of pupils and the class numbers.</p> <p><i>Plan:</i> $140 \text{ kg} + 150 \text{ kg} = \underline{290 \text{ kg}}$</p> <p><i>Answer:</i> The two classes collected 290 kg of chestnuts.</p> <p>c) <i>If Bob was given £240, he would have £600. How much money does Bob have at the moment?</i></p> <p><i>Unnecessary or missing data:</i> none</p> <p><i>Plan:</i> $£600 - £240 = \underline{£360}$ (or $\boxed{360} + 240 = 600$)</p> <p><i>Answer:</i> Bob has £360 at the moment.</p> <p>d) <i>Kate is 170 cm tall and is 24 years old. She is 15 years older than Henry. How old and how tall is Henry?</i></p> <p><i>Missing data:</i> Difference between their heights</p> <p><i>Plan:</i> $24 - 15 = \underline{9}$ (years)</p> <p><i>Answer:</i> Henry is 9 years old. We cannot say how tall he is.</p> <p>e) <i>120 pupils from a primary school went to the circus on Monday but only 80 pupils from the primary school went to the cinema on Tuesday. How many pupils are in the primary school?</i></p> <p><i>Missing data:</i> Number of pupils from the primary school who did <u>not</u> go the circus (or to the cinema)</p> <p>We can only write an inequality for the number of Ps. If the 80 Ps who went to the cinema also went to the circus, there must be <u>at least</u> 120 Ps in the school. If the 80 Ps who went to the cinema did not go the circus, then the school would have <u>at least</u> $120 + 80 = 200$ pupils – but there could be Ps who did not attend either event.</p> <p>BB: Let P be the <u>least</u> number of Ps possible: $120 \leq P \leq 200$</p> <p><i>Answer:</i> We cannot say exactly from the data given.</p> <p style="text-align: right;"><i>20 min</i></p>	<p>Notes</p> <p>Deal with one at a time (T could have questions written on SB or OHT)</p> <p>Discussion, reasoning, agreement, self-correcting, praising</p> <p>T helps Ps to express their reasoning clearly.</p> <p>Extra praise if Ps think of writing the inequality without help from T.</p>

Y4		<i>Lesson Plan 36</i>
Activity 4	<p>PbY4a, page 36</p> <p>Q.1 Read: <i>Practise addition.</i></p> <p>Let's see how many of these you can do in 3 minutes! Start . . . now!</p> <p>Review orally with whole class. Ps change to coloured pencils and mark/correct own work.</p> <p>Who had all 16 correct? Who made 1 (2, 3, more than 3) mistakes? What kind of mistakes? Who did the same? etc.</p> <p>What did you notice? Ps point out connections.</p> <p><i>Solution:</i></p> <p>a) $5 + 2 = \underline{7}$ $50 + 20 = \underline{70}$ $500 + 200 = \underline{700}$ $5000 + 2000 = \underline{7000}$</p> <p>b) $3 + 6 = \underline{9}$ $30 + 60 = \underline{90}$ $300 + 600 = \underline{900}$ $3000 + 6000 = \underline{9000}$</p> <p>c) $8 + 2 = \underline{10}$ $80 + 20 = \underline{100}$ $800 + 200 = \underline{1000}$ $8000 + 2000 = \underline{10000}$</p> <p>d) $3 + 4 = \underline{7}$ $32 + 45 = \underline{77}$ $320 + 450 = \underline{770}$ $3200 + 4500 = \underline{7700}$</p> <p style="text-align: right;">25 min</p>	<p style="text-align: center;">Notes</p> <p>Individual work, monitored (helped)</p> <p>Differentiation by time limit</p> <p>Agreement, self-correction, evaluation, praising</p> <p>If problems, write calculations vertically on BB.</p> <p>Elicit that, e.g. $5 \overset{7}{+} 2 = 2 \overset{7}{+} 5$</p> <p>In addition, the order of terms does not matter; they are interchangeable</p> <p>Feedback for T</p>
5	<p>PbY4a, page 36</p> <p>Q.2 Read: <i>Practise subtraction.</i></p> <p>Let's see how many of these you can do in 3 minutes! Start . . . now!</p> <p>Review orally with whole class. Ps change to coloured pencils and mark/correct own work.</p> <p>Who had all 16 correct? Who made 1 (2, 3, more than 3) mistakes? What kind of mistakes? Who did the same? etc.</p> <p>What did you notice? Ps point out connections.</p> <p><i>Solution:</i></p> <p>a) $8 - 5 = \underline{3}$ $80 - 50 = \underline{30}$ $800 - 500 = \underline{300}$ $8000 - 5000 = \underline{3000}$</p> <p>b) $90 - 40 = \underline{50}$ $900 - 400 = \underline{500}$ $9000 - 4000 = \underline{5000}$</p> <p> $19\ 000 - 4000 = \underline{15\ 000}$</p> <p>c) $10 - 3 = \underline{7}$ $100 - 30 = \underline{70}$ $1000 - 300 = \underline{700}$ $10\ 000 - 3000 = \underline{7\ 000}$</p> <p>d) $7 - 6 = \underline{1}$ $78 - 64 = \underline{14}$ $740 - 680 = \underline{60}$ $7800 - 6400 = \underline{1400}$</p> <p style="text-align: right;">30 min</p>	<p>Individual work, monitored (helped)</p> <p>Differentiation by time limit</p> <p>Agreement, self-correction, evaluation, praising</p> <p>If problems, write calculation vertically, or with place values.</p> <p>Elicit that, e.g. $8 \overset{3}{-} 5 \neq 5 \overset{-3}{-} 8$</p> <p>In subtraction, the order matters; the reductant and subtrahend are <u>not</u> interchangeable</p> <p>Feedback for T</p>
6	<p>PbY4a, page 36</p> <p>Q.3 Read: <i>Fill in the missing numbers.</i></p> <p>How many additions and subtractions are there? ($6 \times 3 = 18$)</p> <p>Let's see how many you can do in 4 minutes! Start . . . now!</p> <p>Review orally with whole class. Ps change to coloured pencils and mark/correct own work.</p> <p>Who had all 18 correct? Who made 1 (2, 3, 4, 5, more than 5) mistakes? What kind of mistakes? Who did the same? etc.</p> <p>What did you notice? Ps point out connections.</p> <p><i>Solution:</i></p> <p>a) $30 + \underline{40} = 70$, $300 + \underline{400} = 700$, $3000 + \underline{4000} = 7000$</p> <p>b) $80 - \underline{60} = 20$, $800 - \underline{600} = 200$, $8000 - \underline{6000} = 2000$</p> <p>c) $\underline{30} + 40 = 70$, $\underline{300} + 400 = 700$. $\underline{3000} + 4000 = 7000$</p> <p>d) $\underline{80} - 60 = 20$, $\underline{800} - 600 = 200$, $\underline{8000} - 6000 = 2000$</p> <p>e) $8 + \underline{5} = 13$, $800 + \underline{500} = 1300$, $8000 + \underline{5000} = 13\ 000$</p> <p>f) $\underline{120} - 90 = 30$, $\underline{1200} - 300 = 900$, $\underline{12\ 000} - 9000 = 3000$</p> <p style="text-align: right;">38 min</p>	<p>Individual work, monitored, helped</p> <p>Written on BB or use enlarged copy master or OHP</p> <p>Differentiation by time limit</p> <p>Agreement, self-correction, evaluation, praising</p> <p>If problems, write calculation vertically on BB, or with place values, e.g.</p> <p>12 Th - 9 Th = 3 Th</p> <p>Extra praise for correct answers to RH column in e) and f)</p> <p>Feedback for T</p>

Y4		<i>Lesson Plan 36</i>
<p>Activity</p> <p>7</p> <p>Extension</p>	<p><i>PbY3a, page 36, Q.4</i></p> <p>Read: <i>Write operations and calculate the results.</i></p> <p>T (P) reads one question at a time. Ps do calculation in <i>Pbs</i> and show result on scrap paper or slates on command. P who answered correctly explains in detail to those who did not. Who agrees? Who did it another way? Mistakes discussed and corrected.</p> <p><i>Solutions:</i></p> <p>a) <i>What is the sum of 4300 and 2800?</i> BB: $4300 + 2800 = 6300 + 800 = 6300 + 700 + 100 = \underline{7100}$</p> <p>b) <i>What is the difference between 4300 and 2800?</i> BB: $4300 - 2800 = 2300 - 800 = 2300 - 300 - 500 = \underline{1500}$</p> <p>c) <i>One term in an addition is 1800. The sum is 5300. What is the other term?</i> BB: $1800 + \boxed{3500} = 5300$ or $5300 - 1800 = 4300 - 800 = 4300 - 300 - 500 = \underline{3500}$</p> <p>d) <i>What is the subtrahend if the reductant is 5300 and the difference is 1800?</i> BB: $5300 - \boxed{3500} = 1800$ or $5300 - 1800 = \underline{3500}$ (from c))</p> <p>e) <i>What is the reductant if the subtrahend is 3800 and the difference is 3300?</i> BB: $\boxed{7100} - 3800 = 3300$ or $3300 + 3800 = 6300 + 800 = 6300 + 700 + 100 = \underline{7100}$</p> <p style="text-align: right;"><i>45 min</i></p>	<p>Notes</p> <p>Whole class activity but individual calculation (or individual work if Ps prefer, under a set time limit and reviewed at BB with whole class)</p> <p>Responses shown in in unison.</p> <p>Reasoning, agreement, self-correcting, praising</p> <p>Extra praise if Ps noticed similarity between a) and b), c) and d).</p> <p>(Revise vocabulary if necessary: <u>reductant</u> is the number being reduced <u>subtrahend</u> is the number being subtracted)</p>

<h1>Y4</h1>	R: Mental calculation C: Addition and subtraction up to 10 000 E: <i>Over 10 000</i>	<h2>Lesson Plan</h2> <h1>37</h1>
Activity 1	Sequences T says the first 3 terms of a sequence. Ps continue it and give the rule. a) 7000, 7600, 8200, (8800, 9400, 10 000, 10 600, ...) [+ 600] b) 4000, 3200, 2400, (1600, 800, 0, - 800, - 1600, ...) [- 800] c) 5070, 5670, 6270, (6870, 7470, 8070, 8670, 9270, 9870, ...) [+ 600] d) 3999, 3599, 3199, (2799, 2399, 1999, 1599, 1199, 799, 399, - 1, - 401, ...) [- 400]	Notes Whole class activity At speed in order round class If a P makes a mistake the next P corrects it. T writes terms on BB Continue to negative numbers if Ps are able. Agreement, praising
2	Chain calculations Listen carefully to each step. Do the calculation in your head and show me the final result (on scrap paper or slates) when I say. a) <i>Start with 6800, subtract 500, ... subtract 400, ... subtract 2900, ... and add 4000.</i> Show me the result ... now! (7000) P who made a mistake goes through the calculations again with help of class: $6800 - 500 = 6300$, $6300 - 400 = 5900$, $5900 - 2900 = 3000$, $3000 + 4000 = \underline{7000}$ b) <i>Start with 5200, add 800, ... subtract 1300, ... add 800, ... and subtract 1300.</i> Show me the result ... now! (4200) P who made a mistake goes through the calculations again with help of class: $5200 + 800 = 6000$, $6000 - 1300 = 4700$, $4700 + 800 = 5500$, $5500 - 1300 = \underline{4200}$ Repeat with another similar calculation if there is time.	Whole class activity Ps nod heads when they are ready for next step. (Less able Ps may write results of each step in <i>Ex. Bks</i>) In unison Reasoning, agreement, praising In unison Reasoning, agreement, praising Ps could think of it!
3	Problems Study the plan. Think of a problem about it. T allows some time for thought, then asks several Ps for their suggestions. Class chooses the one they like best. Do the calculation in your <i>Ex. Bks</i> . Review at BB with whole class. Ps dictate to T or come to BB, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected. a)  e.g. Charlie cycled 2800 m in the morning. After lunch he cycled 2200 m and then another 4400 m. How far did Charlie cycle altogether? <i>Answer:</i> Charlie cycled 9400 m altogether. b)  e.g. Helen cycled 2800 m, then another 2200 m in the morning. After lunch she cycled 4400 m. How far did she cycle altogether? <i>Answer:</i> Helen cycled 9400 m altogether.	Whole class activity T has BB or SB or OHP already prepared. Praise all contributions. Class decides whether they match the diagram. Discussion, reasoning, agreement, self-correction, praising Discuss similarity between a) and b). Agree that in a 3-term (or any) addition, it does not matter which 2 terms are added first, as the result will be the same: BB: $a + (b + c) = (a + b) + c = a + b + c = c + b + a, \dots$ Brackets are not really needed.

20 min

Y4		<i>Lesson Plan 37</i>
<p>Activity</p> <p>4</p>	<p>Addition</p> <p><i>Daffy Duck</i> has done her additions like this. Can you suggest an easier way to do them? Ps come to BB or dictate to T. Class agrees/disagrees.</p> <p>BB: </p> <p>a) $1700 + 830 + 2300 + 170$ $= 2530 + 2300 + 170$ $= 4830 + 170$ $= \underline{5000}$</p> <p>Ps: e.g. $1700 + 830 + 2300 + 170$ $= (1700 + 2300) + (830 + 170)$ $= 4000 + 1000$ $= \underline{5000}$</p> <p>b) </p> <p>$4200 + 380 + 2800 + 620$ $= (4200 + 380) + (2800 + 620)$ $= 4580 + 3420$ $= \underline{8000}$</p> <p>Ps: e.g. $4200 + 380 + 2800 + 620$ $= (4200 + 2800) + (380 + 620)$ $= 7000 + 1000$ $= \underline{8000}$</p> <p style="text-align: right;"><i>25 min</i></p>	<p>Notes</p> <p>Whole class activity</p> <p>Written on BB with <i>Daffy Duck</i> cut out and coloured from enlarged copy master (or use any well-known cartoon character cut out of a magazine)</p> <p>Give several Ps the chance to make a suggestion.</p> <p>Agreement, praising</p> <p>Feedback for T</p>
<p>5</p>	<p><i>PbY4a, page 37</i></p> <p>Q.1 Read: <i>Do the calculations. Colour the equal results in the same colour.</i></p> <p>Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) $4600 + 3900 = \underline{8500}$</p> <p>b) $4600 + 4000 - 100 = \underline{8500}$</p> <p>c) $3900 + 4000 + 600 = \underline{8500}$</p> <p>d) $3900 + 4000 - 600 = 7300$</p> <p>e) $9700 - 1200 = \underline{8500}$</p> <p>f) $9700 - 1000 + 200 = 8900$</p> <p>g) $9700 - 2000 + 800 = \underline{8500}$</p> <p>h) $10\ 000 - 1200 - 300 = \underline{8500}$</p> <p>Ps compare the equal operations and try to explain why the results are the same.</p> <p style="text-align: right;"><i>30 min</i></p>	<p>Individual work, monitored, helped</p> <p>Written on BB or use enlarged copy master or OHP</p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>Extra praise if Ps offer some explanations, e.g.</p> <p>$4000 - 100 = 3900$</p> <p>$4000 + 600 = 4600$</p> <p>$9700 = 10\ 000 - 300$</p> <p>etc.</p>
<p>6</p>	<p><i>PbY4a, page 37</i></p> <p>Q.2 Read: <i>Calculate the sums as simply as you can. Show your calculations in detail.</i></p> <p>Set a time limit. Ps can try out calculations in <i>Ex. Bks</i> or on scrap paper first. Review at BB with whole class.</p> <p>Ps come to BB to show their calculations. Who did the same? Who thinks another way is easier? Class agrees on easiest one.</p> <p><i>Solution:</i></p> <p>a) $360 + 4900 + 4100 + 40 = (360 + 40) + (4900 + 4100)$ $= 400 + 9000 = \underline{9400}$</p> <p>b) $2840 + 650 + 3050 + 160 = (2840 + 160) + (650 + 3050)$ $= 3000 + 3700 = \underline{6700}$</p> <p>c) $410 + 5330 + 2390 + 70 = (410 + 2390) + (5330 + 70)$ $= 2800 + 5400 = \underline{8200}$</p> <p style="text-align: right;"><i>35 min</i></p>	<p>Individual work, monitored (or whole class activity)</p> <p>Written on BB or OHT</p> <p>Discussion, reasoning, agreement, self-correcting (only if result is incorrect), praising</p> <p>Feedback for T</p>

Y4		<i>Lesson Plan 37</i>
<p>Activity</p> <p>7</p>	<p>PbY4a, page 37</p> <p>Q.3 Read: <i>Do part a) in your exercise book. Use the result to help answer parts b) and c).</i></p> <p>Set a time limit. Review at BB with whole class.</p> <p>Ps come to BB to explain their solutions and point out relationships which make calculation easier (including changing the pence to £s!) Class agrees/disagrees. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>Ann had 7500 p. How much more did she have than:</p> <p>a) Peter, if Peter had 2300 p? $7500 - 2300 = \underline{5200}$ Ann had 5200 p (= £52) more than Peter.</p> <p>b) John, if John had 2200 p? ($7500 - 2200 = 5300$) or John had 100 p less than Peter so Ann would have 5400 p (= £54) more than John.</p> <p>c) Diane, if Diane had 1300 p? ($7500 - 1300 = 6200$) or Diane had 1000 p less than Peter so Ann would have 6200 p (= £62) more than Diane.</p> <p style="text-align: right;">38 min</p>	<p>Notes</p> <p>Individual work, monitored helped (or whole class activity)</p> <p>Reasoning, agreement, self-correcting, praising</p> <p>Extra praise if Ps reason b) and c) correctly from result of a) without doing the calculations.</p> <p>Otherwise T gives hints to make Ps think.</p> <p>Encourage Ps to use this kind of reasoning in Q.4</p>
<p>8</p>	<p>PbY4a, page 3</p> <p>Q.4 Read: <i>Do part a) in your exercise book. Use the result to help answer parts b) and c).</i></p> <p>Set a time limit. Review at BB with whole class.</p> <p>Ps come to BB to explain their solutions. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>Each pupil on a school trip spent 3500 p. How much money did:</p> <p>a) Finlay have left if he took 7000 p? $7000 - 3500 = \underline{3500}$ Finlay had 3500 p (= £35) left.</p> <p>b) Emma have left if she took 6800 p? ($6800 - 3500 = \underline{3300}$) Emma took 200 p less than Finlay, so would have 200 p less than Finlay left, i.e. 3300p (= £33) left.</p> <p>c) Lee have left if he took 7300 p? ($7300 - 3500 = \underline{3800}$) Lee took 300 p more than Finlay, so would have 300 p more than Finlay left, i.e. 3800 p (= £38) left.</p> <p style="text-align: right;">41 min</p>	<p>Individual work, monitored helped</p> <p>Reasoning, agreement, self-correcting, praising</p> <p>Extra praise if Ps use result of a) to reason b and c).</p> <p>Or Lee took 500 p more than Emma, so had left 500 p more than Emma.</p>
<p>9</p>	<p>PbY4a, page 3</p> <p>Q.5 Read: <i>Complete the magic squares. The sum of any row, column or diagonal is the same.</i></p> <p>Set a time limit. Review at BB one at a time.</p> <p>Ps come to BB, explaining reasoning. Class checks all rows, columns and diagonals. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) </p> <p>b) </p> <p style="text-align: right;">45 min</p>	<p>Individual work monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Reasoning, checking, agreement, self-correcting, praising</p> <p>Ps could finish off puzzles at home if they run out of time.</p>

Y4

R: Mental calculation
 C: **Addition and subtraction up to 10 000. Written calculations.**
 E: *Over 10 000. Problems in context*

Lesson Plan
38

Activity

1

Sequences

Look at what the arrows mean. Let's fill in the missing terms. Ps come to BB or dictate to T. Class agrees/disagrees.

Let's continue the sequence orally. Ps might notice that top and bottom terms are increasing by the same amount. Why?

BB: a) \longrightarrow means + 4000 and \Longrightarrow means - 3000

b) \longrightarrow means + 4500 and \Longrightarrow means - 2500

5 min

Notes

Whole class activity
 Drawn on BB or use enlarged copy master or OHP
 At a good pace
 Agreement, praising
 For oral continuation, T chooses Ps at random
 Discussion, agreement that:
 a) + 4000 - 3000 = + 1000
 b) + 4500 - 2500 = + 2000
 Feedback for T

2

Magic squares

Let's fill in these magic squares. What should we do first? (Work out the magic number.) Ps agree on total, then come to BB to fill in missing numbers, explaining reasoning. Class checks that all rows, columns and diagonals are equal.

BB:

a)

7000	2000	6000
4000	5000	6000
4000	8000	3000

b)

2800	4500	4700
5900	4000	2100
3300	3500	5200

10 min

Whole class activity
 Drawn on BB or use enlarged copy master or OHP
 Ps suggest what to do first and how to continue.
 Reasoning, agreement, checking, praising
 Feedback for T

3

Problems

Help me to solve these problems. T reads problem twice and Ps repeat in own words. Ps suggest each step and come to BB to write data, make a plan, estimate the result, do the calculation, check the result and say the answer as a sentence. Class agrees/disagrees and writes each step in Ex. Bks too.

a) *The King of Dombreland has £6800 in his bank account and £1900 in a safe at his castle. How much money does he have altogether?*

Data: Bank: £6800 Safe: £1900

Plan: £6800 + £1900 Estimate: £7000 + £2000 = £9000

C: $6800 + 1900 = 7800 + 200 + 700$ or
 $= 8000 + 700$
 $= \underline{8700}$

Answer: He had £8700 altogether.

Lesson Plan 38

Activity

3

(Continued)

b) *The King had a banquet and on the table were two jugs containing his favourite wine. One jug contained 3 litres 500 ml of white wine and the other contained 2700 ml of red wine. Which wine was there more of and how much more?*

Data: W: 3 litres 500 ml = 3500 ml R: 2700 ml

Plan: 3500 ml – 2700 ml E: 4000 – 3000 = 1000

C: 3500 – 2700 = 1500 – 500 – 200 or
 = 1000 – 200
 = 800

Th	H	T	U
3	¹⁰ 5	0	0
-	2	7	0
	8	0	0

Answer: There were 800 ml more of white wine.

If another 1 and a half litres of wine was poured into each jug, which would hold more and how much more?

BB: 3500ml + 1500 ml > 2700 ml + 1500 ml
 800 ml

Answer: The difference between the jugs would be the same.

c) *A straight road leads from the castle to a church, 2860 m away. On the same road and 1720 m from the church is a large rock. How far is the rock from the castle?*

What could we do this time to help us? (Draw a diagram.) Ps dictate what T should draw. e.g.

i) BB:

Plan: 2860 m + 1720 m E: 3000 m + 2000 m = 5000 m

C: 2860 + 1720 = 3860 + 700 + 20 or
 = 4560 + 20
 = 4580

2	8	6	0
+	1	7	2
	4	5	8

(m)

Is this the only possible solution? Listen carefully. T reads problem again. (Elicit that the rock could be before the church.) Let's draw it.

ii) BB:

Plan: 2860 m – 1720 m E: 3000 m – 2000 m = 1000 m

C: 2860 – 1720 = 1860 – 700 – 20 or
 = 1160 – 20
 = 1140

2	8	6	0
-	1	7	2
	1	1	4

(m)

Answer: The rock could be 4580 m (4 km 580 m) from the castle if it was after the church, or 1140 m (1 km 140 m) from the castle if it was between the castle and the church.

1

T asks several Ps what they think.

Let's show it as an inequality.

Agreement, praising

Drawings need only be very rough.

Show distances from centre of each item so that their width need not be taken into account.

Check by comparing with estimate and with a subtraction.

Extra praise if a P thinks of the other possibility without a hint from T

Ps dictate what T should draw (or a P draws the diagram).

Check by comparing with estimate and with an addition or another subtraction.

T helps with wording of final answer.

You have all been very clever!

Y4		<i>Lesson Plan 39</i>
<p>Activity</p> <p>8</p>	<p>PbY4a, page 39</p> <p>Q.4 Read: <i>Write a plan, do the calculation and write the answer in your exercise book.</i></p> <p>Deal with one part at a time. Ps read the question themselves and solve it in <i>Ex. Bks.</i> Set a time limit for each question.</p> <p>Review with whole class. Ps come to BB to show their solution, explaining reasoning. Who agrees? Who thinks something else? Who did it a different way? Who made a mistake? What kind of mistake? etc.</p> <p><i>Solutions:</i></p> <p>a) <i>In Appletown, the number of inhabitants is 6548. The number of females is 3308. How many males live there?</i></p> <p>BB: F: 3308 M + F: 6548 M: 6548 – 3308</p> <p style="padding-left: 40px;">$6548 - 3308 = \underline{3240}$</p> <p><i>Answer:</i> 3240 males live in Appletown.</p> <p>b) <i>In Banaville, there are 5476 females, 260 more than the number of males. How many males live there?</i></p> <p>BB: F: 5476 M : 5476 – 260 = <u>5216</u></p> <p><i>Answer:</i> 5416 males live in Bananaville.</p> <p>c) <i>There are 9500 inhabitants in Dobleland, 2500 more adults than children. How many adults and how many children live there?</i></p> <p>BB: e.g. $A + C = 9500$ $C = A - 2500$</p> <p style="padding-left: 40px;">so $A + (A - 2500) = 9500$</p> <p style="padding-left: 80px;">$2A - 2500 = 9500$</p> <p style="padding-left: 80px;">$2A = 9500 + 2500 = 11\ 000 + 1000 = 12\ 000$</p> <p style="padding-left: 80px;">$A = 12\ 000 \div 2 = \underline{6000}$</p> <p style="padding-left: 40px;">Then $C = 6000 - 2500 = 4000 - 500 = \underline{3500}$</p> <p><i>Answer:</i> There are 6000 adults and 3500 children living in Dobleland.</p> <p style="text-align: right;"><i>45 min</i></p>	<p style="text-align: center;">Notes</p> <p>Individual work, monitored, helped (or part c) could be done with the whole class)</p> <p>Responses could be shown on slates in unison on command.</p> <p>Reasoning, agreement, checking, self-correction, praising</p> <p>Show details of vertical addition/subtraction on BB.</p> <p>Other methods of solution possible, e.g. $C + (C + 2500) = 9500$ or $C = (9500 - 2500) \div 2$</p> <p>Accept any correct method.</p> <p><i>Check:</i> $6000 + 3500 = 9500$ ✓ $6000 - 3500 = 2500$ ✓</p> <p>Ps might notice its similarity to Q.3.</p>

Y4**Lesson Plan
40****Activity**

Tables practice, revision, activities, consolidation of units of measure
PbY4a, page 40

Solutions:

Q.1 a)

	2	2	6	7
+	5	5	7	1
	7	8	3	8

 b)

	5	6	9	1
+	3	7	2	9
	9	4	2	0

 c)

	2	8	9	5
-	1	6	0	3
	1	2	9	2

 d)

	6	8	2	7
-	4	3	8	2
	2	4	4	5

Q.2 a) 5490 b) 5500 c) 5000

Q.3 a) $6020 - (3860 + 1020) = 6020 - 4880 = 1140$
There were 1140 children at the match.

b) $1025 + (1025 + 295) = 1025 + 1320 = 2345$
The farmer has 2345 ducks and chickens altogether.

c) $6345 - (3016 + 2107) = 6345 - 5123 = 1222$
There are 1222 blue beads in the bag.

Q.4 a) 8541 b) 1458 c) 8514 d) 1485
e) 51 and 48

Q.5 a)

Y4

Lesson Plan 41

Activity

2

(Continued)

c) Listen to the story and study the diagram.

Grandma planted 9 rows of flowers, with 12 plants in each row.

Her 3 grandchildren were curious about how many plants there were altogether and worked it out in different ways like this.

Alfie: $9 \times 12 = 9 \times (10 + 2)$
 $= 9 \times 10 + 9 \times 2$
 $= 90 + 18$
 $= \underline{108}$

Bella: $9 \times 12 = 9 \times (6 + 6)$
 $= 9 \times 6 + 9 \times 6$
 $= 54 + 54$
 $= \underline{108}$

Cilla: $9 \times 12 = (10 - 1) \times 12$
 $= 10 \times 12 - 1 \times 12$
 $= 120 - 12$
 $= \underline{108}$

If there was an extra row, there would be 10 rows.

Who can explain their reasoning? Ps come to BB to work through the operations, referring to the diagram. Class points out errors.

A difficult number can be multiplied by writing it as the sum or difference of simpler numbers, then multiplying each of the simpler numbers and adding or subtracting the products.

18 min

Notes

Diagram drawn (or flowers stuck) on BB, or use enlarged copy master or OHP

T repeats story slowly one or two times.

Give Ps time to think.

T intervenes only if necessary.

Encourage other Ps to help with reasoning.

Ps could suggest other such examples. e.g.

$6 \times 25 = 6 \times (20 + 5)$

3

Division

a) Each box holds 6 eggs. Who can write a division about the diagram? Who agrees? Who can think of a different one? etc.

- e.g. i) $46 \text{ eggs} \div 7 = 6 \text{ eggs and } 4 \text{ eggs remain, or}$
- ii) $46 \text{ eggs} \div 6 \text{ eggs} = 7 \text{ (boxes) and } 4 \text{ eggs remain}$

Talk about the two kinds of division:

- i) is sharing equally (1 egg in 1st box, then 1 egg in 2nd box, etc.)
- ii) is dividing into equal groups (e.g. 6 in 1st box, then 6 in 2nd box) and could be shown as a subtraction:

BB: $46 - 6 - 6 - 6 - 6 - 6 - 6 - 6 = 4$, (i.e. 6 subtracted 7 times)

How can we check division? (with multiplication) P come to BB to write it. Class agrees/disagrees.

BB: $46 \div 7 = 6, r 4$ because $46 = 6 \times 7 + 4$

Let's see if you can remember the names of the components in a multiplication. Ps come to BB to point, say and write. Class agrees/disagrees.

Can the dividend and divisor be interchanged? (No, the order matters in division.) T confirms with simple example on BB.

Whole class activity

Drawn on BB or use enlarged copy master or OHP

Ps suggest the divisions.

Discussion, reasoning, agreement, praising

Ps explain to class (with T's help)

Agreement, praising

BB: $46 \div 6 = 7, r 4$

quotient
 ↓
 $46 \div 6 = 7, r 4$
 ↑ ↑ ↑
 dividend divisor remainder
 $12 \overset{2}{\div} 6 \neq 6 \overset{\frac{1}{2}}{\div} 12$

Y4		<i>Lesson Plan 41</i>												
Activity 3	<p>b) Listen carefully and think about how you would solve this problem. <i>Alice bought 9 kg of potatoes for £7.20. How much did 1 kg cost?</i></p> <p>Ps come to BB or dictate to T. Class agrees/disagrees.</p> <p>e.g. BB: $9 \text{ kg} \rightarrow \text{£}7.20 = 720 \text{ p}$ $1 \text{ kg} \rightarrow 720 \text{ p} \div 9 = \underline{80 \text{ p}}$ <i>Check:</i> $80 \text{ p} \times 9 = 720 \text{ p} = \text{£}7.20 \checkmark$</p> <p><i>Answer:</i> 1 kg of potatoes cost 80 p.</p> <p>Agree that division is the <u>reverse</u> of multiplication (and subtraction is the reverse of addition).</p> <p style="text-align: right;"><i>23 min</i></p>	<p style="text-align: center;">Notes</p> <p>Whole class activity Reasoning, agreement, checking, praising</p> <p>We could also show it in a diagram like this: BB: </p>												
4	<p>Problems</p> <p>Let's think of different ways in which we could solve these problems.</p> <p>a) <i>6 friends spent the day in London together. They each paid an equal share of the bills for their lunch and dinner. Their lunch bill was £42 and their dinner bill was £48.</i> <i>How much did each person pay altogether?</i></p> <p>Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Who can think of a different way to solve it? etc.</p> <p>BB: e.g.</p> <table style="margin-left: 40px;"> <thead> <tr> <th></th> <th><i>Lunch</i></th> <th><i>Dinner</i></th> <th><i>Total</i></th> </tr> </thead> <tbody> <tr> <td><i>Data:</i> 6 people</td> <td>£42</td> <td>£48</td> <td>?</td> </tr> <tr> <td>1 person</td> <td>?</td> <td>?</td> <td>?</td> </tr> </tbody> </table> <p>i) Work out the total amount the 6 people paid, then divide by 6. $(48 + 42) \div 6 = 90 \div 6 = 60 \div 6 + 30 \div 6 = 10 + 5 = \underline{15}$</p> <p>ii) Work out what each person paid for lunch and for dinner, then add the two amounts together. $48 \div 6 + 42 \div 6 = 8 + 7 = \underline{15}$</p> <p><i>Answer:</i> Each person paid £15.</p> <p>b) <i>8 copies of a book should cost £88 altogether but the shopkeeper reduced the total price by £16.</i> <i>How much did the shopkeeper actually charge for each book?</i></p> <p>Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Who can think of a different way to solve it? etc. e.g.</p> <p>i) Work out the reduced price of 8 books then divide by 8. BB: $(88 - 16) \div 8 = 72 \div 8 = \underline{9}$</p> <p>ii) Work out what each book should really cost, then subtract the reduction on each book. BB: $88 \div 8 - 16 \div 8 = 11 - 2 = \underline{9}$</p> <p><i>Answer:</i> The shopkeeper charged £9 for each book.</p> <p style="text-align: right;"><i>26 min</i></p>		<i>Lunch</i>	<i>Dinner</i>	<i>Total</i>	<i>Data:</i> 6 people	£42	£48	?	1 person	?	?	?	<p>Whole class activity T reads each problem slowly twice and Ps repeat in own words. Ps suggest plans (with T's help) Reasoning, agreement, praising</p> <p>Elicit that to divide 'difficult' numbers, write it as the sum (difference) of two simpler numbers, then divide each simpler number by the divisor and add (subtract) the two quotients.</p>
	<i>Lunch</i>	<i>Dinner</i>	<i>Total</i>											
<i>Data:</i> 6 people	£42	£48	?											
1 person	?	?	?											

Y4		<i>Lesson Plan 41</i>
<p>Activity</p> <p>5</p>	<p>PbY4a, page 41</p> <p>Q.1 Read: <i>Write the products.</i></p> <p>Elicit that there are $6 \times 4 = 24$ multiplications. Set a time limit.</p> <p>Review orally with whole class. Ps change pencils and mark/correct own work. Who had all 24 correct? Who had 1 (2, 3, 4 more than 4) mistakes? What was your mistake? etc.</p> <p>Ps point out relationships they have noticed.</p> <p><i>Solution:</i></p> <p>a) $3 \times 6 = \underline{18}$, $30 \times 6 = \underline{180}$, $3 \times 60 = \underline{180}$, $30 \times 60 = \underline{1800}$</p> <p>b) $8 \times 4 = \underline{32}$, $80 \times 4 = \underline{320}$, $800 \times 4 = \underline{3200}$, $80 \times 40 = \underline{3200}$</p> <p>c) $9 \times 3 = \underline{27}$, $90 \times 3 = \underline{270}$, $9 \times 300 = \underline{2700}$, $90 \times 30 = \underline{2700}$</p> <p>d) $8 \times 7 = \underline{56}$, $80 \times 7 = \underline{560}$, $8 \times 70 = \underline{560}$, $800 \times 7 = \underline{5600}$</p> <p>e) $6 \times 7 = \underline{42}$, $60 \times 7 = \underline{420}$, $600 \times 7 = \underline{4200}$, $6 \times 700 = \underline{4200}$</p> <p>f) $9 \times 9 = \underline{81}$, $90 \times 9 = \underline{810}$, $900 \times 9 = \underline{8100}$, $90 \times 90 = \underline{8100}$</p> <p style="text-align: right;"><i>31 min</i></p>	<p>Notes</p> <p>Individual work, monitored (helped)</p> <p>Differentiation by time limit</p> <p>Agreement, self-correcting, evaluation, praising</p> <p>Write details of problem calculations on BB.</p> <p>Discuss connections, e.g. if the dividend (divisor) increases by 10 (100) times, the quotient also increases by 10 (100) times.</p> <p>Praise all contributions</p> <p>Feedback for T</p>
<p>6</p>	<p>PbY4a, page 41</p> <p>Q.2 Read: <i>Fill in the missing numbers.</i></p> <p>Elicit that the missing factor can be calculated by dividing the product by the given factor and that there are $6 \times 3 = \underline{18}$ multiplications. Set a time limit.</p> <p>Review orally with whole class. Ps change pencils and mark/correct own work. Who had all 18 correct? Who had 1 (2, 3, more than 3) mistakes? What was your mistake? etc.</p> <p>Ps point out relationships they have noticed.</p> <p><i>Solution:</i></p> <p>a) $8 \times \underline{3} = 24$, $8 \times \underline{60} = 240$, $8 \times \underline{300} = 2400$</p> <p>b) $5 \times \underline{9} = 45$, $5 \times \underline{90} = 450$, $5 \times \underline{900} = 4500$</p> <p>c) $6 \times \underline{5} = 30$, $6 \times \underline{50} = 300$, $6 \times \underline{500} = 3000$</p> <p>d) $9 \times \underline{4} = 36$, $9 \times \underline{40} = 360$, $90 \times \underline{40} = 3600$</p> <p>e) $4 \times \underline{7} = 28$, $4 \times \underline{70} = 280$, $40 \times \underline{70} = 2800$</p> <p>f) $6 \times \underline{9} = 54$, $60 \times \underline{9} = 540$, $60 \times \underline{90} = 5400$</p> <p style="text-align: right;"><i>35 min</i></p>	<p>Individual work, monitored, helped</p> <p>Differentiation by time limit</p> <p>Agreement, self-correcting, evaluation, praising</p> <p>Write details of problem calculations on BB, e.g.</p> <p>$3600 \div 90 = 360 \div 9 = \underline{40}$ so $90 \times \underline{40} = 3600$</p> <p>Discuss relationships. Praise all contributions.</p> <p>Feedback for T</p>

<h1>Y4</h1>	<p>R: Mental calculation C: Multiplication and division up to 10 000. Written multiplication (1 digit) E: <i>Numbers over 10 000. Problems</i></p>	<h2>Lesson Plan 42</h2>
Activity 1	<p>Mental practice</p> <p>T says an operation. Ps say result.</p> <p>a) Addition and subtraction: e.g. $67 + 7$, $158 + 5$, $2403 + 9$, $67 + 24$, $418 + 34$, $5249 + 16$, $4300 + 1800$, etc. $72 - 8$, $423 - 7$, $6519 - 7$, $72 - 28$, $423 - 27$, $6519 - 20$, $5400 - 1600$, etc.</p> <p>b) Multiplication and division tables: e.g. 4×5, 9×9, 5×0, $25 \div 5$, $27 \div 3$, $49 \div 7$, $2 \div 1$, $0 \div 10$, etc. Ps can give them too!</p> <p>c) Multiplication and division: e.g. 17×2, 43×3, 154×2, 2320×3, 2500×4, 5000×2, etc. $48 \div 2$, $630 \div 3$, $420 \div 5$, $8000 \div 4000$, etc.</p> <p>Write difficult operations on BB. e.g. BB: $40 \times 99 = 40 \times 100 - 40 \times 1 = 4000 - 40 = \underline{3960}$</p> <p style="text-align: right;"><i>8 min</i></p>	<p style="text-align: center;">Notes</p> <p>Whole class activity T chooses Ps at random (more difficult calculations to more able Ps) Class points out errors. At speed, in good humour!</p> <p>In order round class, at speed If a P answers incorrectly, next P corrects it.</p> <p>T chooses Ps at random (easier calculations to less able Ps) Praising, encouragement only</p>
2	<p>Revision</p> <p>a) <i>Vocabulary</i></p> <p>T (or P) writes a multiplication and a division on the BB. Ps come out to BB to write result, explaining reasoning, and to point to and name each component. Class agrees/disagrees. e.g. BB: $30 \times 40 = (1200)$ $750 \div 50 = (15)$ \times: multiplicand and multiplier (or factors), product \div: dividend, divisor, quotient</p> <p>b) <i>Properties</i></p> <p>Let's complete these open sentences. Ps come to BB or dictate to T. Class agrees/disagrees. e.g.</p> <p>i) The terms of an addition are inter-changeable. ii) The reductant and subtrahend of a subtraction are not inter-changeable. iii) The factors of a multiplication are inter-changeable. iv) The dividend and divisor of a division are not inter-changeable.</p> <p style="text-align: right;"><i>13 min</i></p>	<p>Whole class activity (Names of components could be written on flash cards and stuck to side of BB. Ps point to a component and choose and read the appropriate name card.) Agreement, praising</p> <p>Written on BB or SB or use enlarged copy master or OHP Agreement, praising What else can you tell us about any of the operations? e.g.</p> <ul style="list-style-type: none"> • subtraction (division) is the reverse of addition (multiplication) • addition of <u>equal</u> numbers can be replaced by \times, etc.
3	<p>Multiplication</p> <p>Who can help me with these multiplications? Ps come to BB to write the products, explaining reasoning. Class points out errors. What do you notice? (The sum of the first 4 products equals the 5th product; the bottom multiplicand is the sum of the first 4 multiplicands.)</p> <p>BB:</p> <p>a) $3 \times 4 = (12)$ b) $5 \times 3 = (15)$ c) $5 \times 7 = (35)$ $20 \times 4 = (80)$ $5 \times 80 = (400)$ $80 \times 7 = (560)$ $400 \times 4 = (1600)$ $5 \times 400 = (2000)$ $700 \times 7 = (4900)$ $2000 \times 4 = (8000)$ $5 \times 1000 = (5000)$ $785 \times 7 = (5495)$ $2423 \times 4 = (9692)$ $5 \times 1483 = (7415)$</p> <p>Elicit that the bottom multiplicand has been written as the sum of simpler numbers to make the multiplication easier.</p>	<p>Whole class activity Written on BB or use enlarged copy master or OHP At a good pace Agreement, praising</p> <p>Agreement, praising</p>

Division

Who can help me with these divisions? Ps come to BB to write the quotients, explaining reasoning. Class points out errors.

What do you notice? Ps come to BB to point and reason (with T's help in b) to explain that the remainder in each row has been added to the next row, e.g. $90 + 100 = 190$).

BB:

a) $600 \div 3 = (200)$ b) $4300 \div 6 = (700, r 100)$
 $90 \div 3 = (30)$ $190 \div 6 = (30, r 10)$
 $7 \div 3 = (2, r 1)$ $17 \div 6 = (2, r 5)$
 $697 \div 3 = (232, r 1)$ $4397 \div 6 = (732, r 5)$

How could we calculate the bottom division in each column in another way? Ps comes to BB to write it. Who agrees? Who can think of another way? etc.

BB: e.g.

a)

	H	T	U
	2	3	2
3	6	9	7
-	6		
	0	9	
	-	9	
		0	7
		-	6
			①

 or

	H	T	U
	2	3	2
3	6	9	7
			1

 r 1

b)

	Th	H	T	U	
		7	3	2	
6	4	3	9	7	
-	4	2			
		1	9		
		-	1	8	
			1	7	
			-	1	2
					⑤

 or

	Th	H	T	U
		7	3	2
6	4	3	9	7
			1	5

 r 5

or a) $697 \div 3 = (690 + 7) \div 3 = 230 + 2, r 1 = \underline{232, r 1}$
 b) $4397 \div 6 = (4200 + 180 + 17) \div 6 = 700 + 30 + 2, r 5 = \underline{732, r 5}$

25 min

Activity

5

PbY4a, page 42

Q.1 Read: *Fill in the missing numbers.*

Deal with one part at a time [or do part a) first with the whole class, then part b) as individual work]. Ps could estimate the results first by rounding to nearest 1000. Encourage Ps to think about what they are doing and to try to understand the steps.

Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning in detail with place values. Mistakes discussed and corrected.

Ps read completed steps while T points to the relevant parts of the calculation.

Solution:

a)

Th	H	T	U
3	2	5	1
3	2	5	1
3	2	5	1
9	7	5	3

$3 \times 1U = 3U$

$3 \times 5T = 15T = 1H + 5T$

$3 \times 2H + 1H = 7H$

$3 \times 3Th = 9Th$

$E: \quad 3000 \times 3 = 9000$

b)

Th	H	T	U
1	7	5	6
1	7	5	6
1	7	5	6
7	0	2	4

$4 \times 6U = 24U = 2T + 4U$

$4 \times 5T + 2T = 22T = 2H + 2T$

$4 \times 7H + 2H = 30H = 3Th + 0H$

$4 \times 1Th + 3Th = 7Th$

$E: \quad 2000 \times 4 = 8000$

30 min

Notes

Individual work, monitored, helped

Written on BB or SB or use enlarged copy master or OHP

Discussion reasoning, checking against estimate, agreement, self-correction, praising

In unison, or a different P for each step

6

PbY4a, page 42

Q.2 Read: *Estimate first, then calculate with addition and with multiplication.*

Ps can estimate by rounding to nearest 1000 or nearest 100. Agree that rounding to nearest 100 will be closer to real value.

Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning with place value detail. Mistakes discussed and corrected.

Which do you think is easier, addition or multiplication? (Ps most likely will agree that multiplication is easier if lots of the same number have to be added.) Encourage Ps to use the short form of multiplication but only if they understand what they are doing.

Solution:

a) $E: \quad 2600 \times 4 = 10\,400$ or $3000 \times 4 = 12\,000$

2	6	4	7
2	6	4	7
2	6	4	7
2	6	4	7
10	5	8	8
2	1	2	

$2\,647 \times 4$

$10\,588$

b) $E: \quad 1700 \times 6 = 10\,200$ or $2000 \times 6 = 12\,000$

1	6	7	8
1	6	7	8
1	6	7	8
1	6	7	8
1	6	7	8
1	6	7	8
10	0	6	8
4	4	4	

$1\,678 \times 6$

$10\,068$

35 min

Individual work, monitored helped

Drawn on BB or use enlarged copy master or OHP

Initial discussion about estimating

Reasoning, checking against estimate, agreement, self-correction, praising

Show as long multiplication if problems, e.g.

1	6	7	8	×	6
		4	8		
	4	2	0		
3	6	0	0		
6	0	0	0		
1	0	0	6	8	

Discuss advantages of multiplication over addition.

(Quicker, easier if Ps know the \times tables by heart, less writing if short form is used)

Lesson Plan 42

Activity

7

PbYa, page 42

Q.3 Read: *Which is more? How many more? Write in the missing signs and differences.*

Deal with one part at a time. How can we do it? (Work out the product for each side, then subtract the smaller from the greater product.) Ps can do the calculations in their *Ex. Bks.*

Review at BB with whole class Ps come to BB or dictate to T, explaining reasoning. Mistakes discussed and corrected.

Solution:

- a) 6 times 1480 $\boxed{=}$ 3 times 2960 Extra praise if Ps notice that 2960 is twice 1480 without doing calculations.
 8880 $\boxed{0}$ 8880
- b) 9 times 875 $\boxed{>}$ 5 times 1420
 7875 $\boxed{775}$ 7100
- c) 4 times 3100 $\boxed{<}$ 7 times 1800
 12 400 $\boxed{200}$ 12 600
- d) 8 times 734 $\boxed{>}$ 2 times 2931
 5872 $\boxed{10}$ 5862

41 min

Notes

(or more complicated multiplications with the whole class)

Written on BB or SB or OHT

Discussion reasoning, agreement, self-correction, praising

Calculations written on BB if problems, e.g.

	8	7	5		1	4	2	0
		×	9				×	5
7	8	7	5		7	1	0	0
	6	4				2	1	

	7	8	7	5
-	7	1	0	0
	7	7	5	

Feedback for T

8

PbY4a, page 42, Q.4

Read: *Write these digits in the boxes so that the product is less than 10 000 and it is:*

- a) odd b) even c) a 4-digit number.

Deal with one part at a time. Let Ps think about it and try it themselves for a minute, or discuss with their neighbour.

Then Ps come to BB to write a solution and explain their reasoning, with help of class. T gives hints if Ps have no idea what to do. (e.g in a) units digit and multiplier must both be odd, i.e. 3 or 5, but the multiplier cannot be 5, or the product would be > 10 000; choose the thousands digit by estimation)

Solution:

- 2
3
4
5
6
- a) odd $\frac{\boxed{2}\boxed{6}\boxed{4}\boxed{5}}{7\ 9\ 3\ 5} \times \boxed{3}$ or $\frac{\boxed{2}\boxed{4}\boxed{6}\boxed{5}}{7\ 3\ 9\ 5} \times \boxed{3}$
- b) even $\frac{\boxed{2}\boxed{4}\boxed{5}\boxed{6}}{7\ 3\ 6\ 8} \times \boxed{3}$ or $\frac{\boxed{2}\boxed{6}\boxed{5}\boxed{4}}{7\ 9\ 6\ 2} \times \boxed{3}$ etc.
- c) 4-digit $\frac{\boxed{4}\boxed{6}\boxed{5}\boxed{3}}{9\ 3\ 0\ 6} \times \boxed{2}$ or any of the numbers in parts a) and b), etc.

45 min

Whole class activity

(or individual trial first if Ps wish)

Digits written or stuck on BB

Discussion on strategy for solution. Ps suggest what to do first and how to continue.

Encourage logical reasoning, rather than trial and error.

Extra praise if Ps find a correct solution without help.

If no time to complete during the lesson, the remaining parts could be done for homework.

<h1>Y4</h1>	<p>R: Mental calculation C: Multiplication and division up to 10 000. Written division (1 digit) E: Numbers up to 20 000</p>	<h2>Lesson Plan 43</h2>

Problems

Listen carefully and think about how you would solve these problems.

T reads problem slowly twice and Ps note data in *Ex. Bks.* Ps come to BB to show each step of the solution while Ps work in *Ex. Bks.*

a) 7 metres of iron pipe weighs 3150 g. What would 1 metre weigh?

BB: e.g.

$$\begin{array}{l} \text{Plan: } 7 \text{ m} \rightarrow 3150 \text{ g} \qquad E: 2800 \text{ g} \div 7 < w < 3500 \text{ g} \div 7 \\ \qquad 1 \text{ m} \rightarrow 3150 \text{ g} \div 7 \qquad 400 \text{ g} < w < 500 \text{ g} \end{array}$$

$$\begin{array}{l} C: \quad 3150 \div 7 = 2800 \div 7 + 350 \div 7 \quad \text{Check:} \\ \qquad = 400 + 50 \\ \qquad = \underline{450} \text{ (g)} \end{array}$$

4	5	0
	\times	7
3	1	5
		0
		3

Answer: 1 metre of iron pipe would weigh 450 g.

b) In a flower shop, the assistant is tying flowers in bunches of 8. How many bunches can she make if she has 455 flowers?

BB: e.g.

$$\begin{array}{l} \text{Plan: } 8 \text{ flowers: } \rightarrow 1 \text{ bunch} \qquad E: 480 \div 8 = 60, \text{ or} \\ \qquad 455 \text{ flowers} \rightarrow 455 \div 8 \text{ (bunches)} \end{array}$$

$$\begin{array}{l} C: \quad 455 \div 8 = 400 \div 8 + 55 \div 8 \quad \text{or} \\ \qquad = 50 + 6, r 7 \\ \qquad = \underline{56, r 7} \end{array}$$

		5	6
8	4	5	5
-	4	0	
		5	5
	-	4	8
			7

Answer: She can make 56 bunches and will have 7 flowers left over.

25 min

Notes

Whole class activity

Ps decide what steps should be done, then come to BB to show them. Class points out missed steps or errors.

Reasoning, agreement, checking, praising

Accept any correct form of estimation, calculation and check.

Ps say answers in unison.

$$\begin{array}{l} E: 400 \div 8 < b < 480 \div 8 \\ \qquad 50 < b < 60 \end{array}$$

Check:

$$\begin{array}{l} 56 \times 8 + 7 = 400 + 48 + 7 \\ \qquad = 448 + 7 \\ \qquad = 455 \checkmark \end{array}$$

5

PbY4a, page 43

Q.1 Read: *Fill in the missing numbers.*

Elicit that there are $3 \times 3 \times 2 = 18$ operations. Encourage Ps to calculate mentally. Set a time limit.

Review at BB with whole class. Ps dictate results to T, explaining reasoning. Ps change pencils and mark/correct own work.

Who had all 18 correct? Who made 1 (2, 3, more than 3) mistakes? What was your mistake? etc.

What did you notice? Ps point out relationships.

Solution:

$$\begin{array}{lll} \text{a) } 8 \times \underline{6} = 48 & 80 \times \underline{6} = 480 & 800 \times \underline{6} = 4800 \\ 4 \times \underline{12} = 48 & 40 \times \underline{12} = 480 & 400 \times \underline{12} = 4800 \\ 16 \times \underline{3} = 48 & 160 \times \underline{3} = 480 & 1600 \times \underline{3} = 4800 \end{array}$$

$$\begin{array}{lll} \text{b) } 36 \div \underline{9} = 4 & 3600 \div \underline{900} = 4 & \underline{3600} \div 9 = 400 \\ 360 \div \underline{90} = 4 & 3600 \div \underline{90} = 40 & \underline{3600} \div 90 = 40 \\ 360 \div \underline{9} = 40 & 3600 \div \underline{9} = 400 & \underline{3600} \div 900 = 4 \end{array}$$

30 min

Individual work, monitored, (helped)

Written on BB or use enlarged copy master or OHP

Discussion, reasoning, agreement, self-correction, evaluation, praising

Extra praise if Ps notice connections by themselves.

e.g. If the dividend increases by a certain number of times, the quotient also increases by that number of times;

If the divisor increases by a certain number of times, the quotient decreases by that number of times.

Y4

Lesson Plan 43

Activity

6

PbY3a, page 43, Q.2

Read: *Divide 7640 into 3 equal parts. Fill in the missing items.*

Who can come and point to the division? Read it for us ('seven thousand six hundred and forty divided by 3') What should we do first? (Estimate the quotient) Where is it on the BB? P come to point. Why is it written like that? (Because 6000 and 9000 are the next smaller and greater thousands easily divisible by 3) Who can fill in the missing numbers? Who agrees? Let's read the inequality together. T points to each component. 'The quotient is more than 2000 and less than 3000.'

Now let's do the calculation. Ps come to BB to do each step, then fill in and say the relevant 'details'. Class agrees/disagrees. Ps complete steps in *Pbs* too. Continue until calculation is completed.

What should we do now? (Compare with the estimate.) Agree that 2546 is more than 2000 but less than 3000. How could we check it more accurately? (With a multiplication) Ps come to BB to show it. Let's read all the steps again. T points to relevant parts of calculation.

Solution:

E: $6000 < 7640 < 9000$

$2000 < \text{quotient} < 3000$

	Th	H	T	U
	2	5	4	6
3	7	6	4	0
-	6			
	1	6		
-	1	5		
		1	4	
-		1	2	
			2	0
			1	8
				②

Details:

- 7 Th \div 3 = $\boxed{2}$ Th, because
- $\boxed{2}$ Th \times 3 = $\boxed{6}$ Th, and $\boxed{1}$ Th remains.
- 1 Th + 6 H = 16H; 16H \div 3 = $\boxed{5}$ H, because
- $\boxed{5}$ H \times 3 = $\boxed{15}$ H, and $\boxed{1}$ H remains.
- 1H + 4T = 14T; 14T \div 3 = $\boxed{4}$ T, because
- $\boxed{4}$ T \times 3 = $\boxed{12}$ T, and $\boxed{2}$ T remains.
- 2T + 0U = 20U, 20U \div 3 = $\boxed{6}$ U, because
- $\boxed{6}$ U \times 3 = $\boxed{18}$ U,
- and $\boxed{2}$ U remains.

Ps first count the unit cubes along each edge and write the number beside it. Then they write the multiplication with the factors in 3 different orders.</p> <p>Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p><i>Solution:</i> e.g.</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>a)</p>  <p>$V = \frac{8 \times 4 \times 2 = 32 \times 2 = 64}{\text{etc.}}$</p> </div> <div style="text-align: center;"> <p>b)</p>  <p>$V = \frac{6 \times 7 \times 4 = 42 \times 4 = 168}{\text{etc.}}$</p> </div> </div> <p style="text-align: right;">12 min</p>	<p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Discussion, reasoning, agreement, self-correcting, praising</p> <p>Agree that as all operations are multiplications, the order of factors does not matter – the result is the same.</p> <p>Extension</p> <p>What is the area of each face? T points to a face and class shouts out its area in <u>unit squares</u>.</p>

Y4

Lesson Plan 44

Activity

3

Missing numbers

Let's fill in the missing numbers. You can do the calculations in your *Ex. Bks.* first if you wish. Ps come to BB to write numbers, explaining reasoning. Class agrees/disagrees. Extra praise if Ps notice a 'clever' way.

BB:

a) $1678 \times 4 = 1678 \times 3 + \boxed{1678}$

1	6	7	8
6	7	1	2
2	3	3	

1	6	7	8
5	0	3	4
2	2	2	

6	7	10	10
5	0	3	4
1	6	7	8

But no calculation is necessary, as $4 \times n = 3 \times n + n$

b) $1905 \times 6 = 1905 \times 8 - \boxed{3810}$

1	9	0	5
1	1	4	3
5	3		

1	9	0	5
1	5	2	4
7	4		

1	5	10	2
1	1	4	3
3	8	1	0

But only one calculation is necessary: $1905 \times 2 = 3810$ as $6 \times n = 8 \times n - 2 \times n$

18 min

Notes

Whole class activity

Written on BB or SB or OHT

Reasoning, agreement, praising

Necessary calculations done at side of BB.

If no P notices easy methods, T gives hints.

Class applauds P who notices this!

4

Inequalities

Which numbers could be written instead of the square to make the inequality true? What should we do first? (Work out the value of each side.) Ps work out values in *Ex. Bks.* then come to BB to write results as another inequality. Class agrees/disagrees.

What numbers would make it true? Class dictates and T writes on BB.

BB:

a) $3476 \times 5 < \square < 4346 \times 4$

$17380 < \square < 17384$

\square : 17381, 17382, 17383

	3	4	7	6
1	7	3	8	0
2	3	3		

	4	3	4	6
1	7	3	8	4
1	1	2		

b) $1075 \times 7 > \square \geq 1503 \times 5$

$7525 > \square \geq 7515$

\square : 7524, 7523, ..., 7516, 7515 (10 numbers)

23 min

Whole class activity

Written on BB or SB or OHT

Ps suggest how to solve them, with help of class

Reasoning, agreement, checking, praising

Check with smallest and greatest values from list.

Feedback for T

5

Equal values

What do you notice about these operations? (They contain the same numbers and the same two operations.) Which of them do you think are the same? T marks the equations that Ps think have equal results. Let's do the calculations and see whether you are correct.

Ps do calculations in *Ex. Bks* first before coming to BB or dictating to T. Class agrees/disagrees. Mistakes in *Ex. Bks* corrected.

Did you choose the correct equal values? Why did you choose them?

BB: $7200 \div 9 - 3 = 800 - 3 = \underline{797}$

$7200 \div (9 - 3) = 7200 \div 6 = \underline{1200}$

$7200 \div 3 - 9 = 2400 - 9 = \underline{2391}$

$(7200 - 9) \div 3 = 7191 \div 3 = \underline{2397} \checkmark$

$7200 - 9 \div 3 = 7200 - 3 = \underline{7197}$

$7200 \div 3 - 9 \div 3 = 2400 - 3 = \underline{2397} \checkmark$

28 min

Whole class activity

Initial discussion and deciding

Reasoning, agreement, self-correcting, praising

Extra praise if correct.

Ps explain reason for choice (with T's help if necessary).

C:

1	2	0	0
6	7	2	0
1			

	2	4	0	0
3	7	2	0	0
1				

	2	3	9	7
3	7	1	9	1
1	2	2		

Y4

Lesson Plan 44

Activity

6

PbYa, page 44

Q.2 Read: *Fill in the missing numbers.*

Let's see how quickly you can solve these! Stand up when you have finished.

P who finished first explains reasoning to class. Class agrees/disagrees. Who did the same? Who did it a different way?

Solution:

a) $1256 \times 6 = 1256 \times 5 + \boxed{1256}$

(No calculation is necessary, as $6 \times n = 5 \times n + n$)

b) $2432 \times 3 = 2433 \times 3 - \boxed{3}$

(No calculation is necessary as $2432 \times n = 2433 \times n - n$)

Check for Ps who did the calculations:

a)

1	2	5	6
		×	6
7	5	3	6
1	3	3	

1	2	5	6
		×	5
6	2	8	0
1	2	3	

7	5	0	3	6
6	2	8	0	
1	2	5	6	

b)

2	4	3	2
		×	3
7	2	9	6
1			

2	4	3	3
		×	3
7	2	9	9
1			

 $7299 - 7296 = \underline{3}$

32 min

Notes

Individual work, monitored

T notes which Ps finish quickly.

If P reasoned correctly, class gives 3 cheers!

If several Ps did the calculations, let Ps go through them on the BB in case mistakes were made.

Reasoning, agreement, self-correction, praising

7

PbY4a, page 44

Q.3 a) Read: *How many squares can you count in this diagram?*

Show me the answer . . . now! (5) P who answered correctly comes to BB to point and count. Mistakes corrected.

b) Read: *How many squares could you count in:*

i) *675 of these diagrams* (3375 squares)

ii) *1060 of these diagrams?* (5300 squares)

Ps can do calculations in *Ex. Bks* or on scrap paper. Results could be shown on scrap paper or slates on command.

Ps who responded incorrectly come to BB to do calculations with help of class. Mistakes discussed/corrected.

BB: i)

6	7	5
	×	5
3	3	5
3	2	

ii)

1	0	6	0
	×	5	
5	3	0	0
			3

Individual work, monitored

Diagram drawn on BB:

Agreement, self-correction, praising

Give Ps enough time to do calculations.

In unison

Reasoning, agreement, self-correcting, praising

Extension

If the question had asked for the number of rectangles, what would the answers be? Ps come to BB or dictate to T.

a) 9 rectangles (including the 5 squares) b) i)

6	7	5
	×	9
6	0	5
6	4	

ii)

1	0	6	0
	×	9	
9	5	4	0
			5

37 min

Whole class activity

Reasoning, agreement, praising

45****Activity**

Tables practice, revision, activities, consolidation
PbY4a, page 45

Solutions:

Q.1 a) 16

b) i) $16 \times 100 = 1600$ ii) $16 \times 1000 = 16\,000$

Q.2 a) $4200 \xrightarrow{\div 4} 1050 \xrightarrow{\div 5} 210 \xrightarrow{\div 6} 35 \xrightarrow{\times 8} 280 \xrightarrow{\times 5} 1400$

b) $4200 \xrightarrow{\div 10} 420 \xrightarrow{\div 3} 140 \xrightarrow{\div 4} 35 \xrightarrow{\times 5} 175 \xrightarrow{\times 6} 1050$

c) $4200 \xrightarrow{\div 7} 600 \xrightarrow{\div 10} 60 \xrightarrow{\div 5} 12 \xrightarrow{\times 25} 300 \xrightarrow{\times 2} 600$

Q.3 16 different results are possible (for each of the 4 possible signs chosen as the 1st sign, there are 4 possible signs for the 2nd sign, but Ps should list them to make sure that results are different)

$$1000 \div 10 \div 5 = 20$$

$$1000 \times 10 \div 5 = 2000$$

$$1000 \div 10 \times 5 = 500$$

$$1000 \times 10 \times 5 = 50\,000$$

$$1000 \div 10 + 5 = 105$$

$$1000 \times 10 + 5 = 10\,005$$

$$1000 \div 10 - 5 = 95$$

$$1000 \times 10 - 5 = 9995$$

$$1000 + 10 \div 5 = 1002$$

$$1000 - 10 \div 5 = 998$$

$$1000 + 10 \times 5 = 1050$$

$$1000 - 10 \times 5 = 950$$

$$1000 + 10 + 5 = 1015$$

$$1000 - 10 + 5 = 995$$

$$1000 + 10 - 5 = 1005$$

$$1000 - 10 - 5 = 985$$

Q.4 a) $75 \text{ kg} \times 6 = 420 \text{ kg} + 30 \text{ kg} = 450 \text{ kg}$ (after 6 weeks)

b) Had left after 6 weeks: $1000 \text{ kg} - 450 \text{ kg} = 550 \text{ kg}$

c) Had left 550 g but used 450 kg in 6 weeks, so after another 6 weeks might have left $550 \text{ kg} - 450 \text{ kg} = 100 \text{ kg}$, which is enough for another week's supply.

Answer: Mr. Black might run out of coal after 13 weeks.

Q.5

\times	2	4	6	8	10
2	4	8	12	16	20
4	8	16	24	32	40
6	12	24	36	48	60
8	16	32	48	64	80
10	20	40	60	80	100

\times	1	3	5	7	9
1	1	3	5	7	9
3	3	9	15	21	27
5	5	15	25	35	45
7	7	21	35	49	63
9	9	27	45	63	81

\times	1	3	5	7	9
2	2	6	10	14	18
4	4	12	20	28	36
6	6	18	30	42	54
8	8	24	40	56	72
10	10	30	50	70	90

Q.6 The digit 8 is used 20 times (9 times in 8, 18, . . . 78, 98
11 times in 80, 81, . . . , 88, 89)

Notes

<h1>Y4</h1>	<p>R: Calculations C: Geometry: 1-D, 2-D, 3-D shapes. Angles. Parallel and perpendicular lines E: Problems</p>	<h2>Lesson Plan 46</h2>
<p>Activity</p> <p>1</p>	<p>Geometric shapes 1</p> <p>Let's remind ourselves about the different kinds of shapes.</p> <p>What can you tell me about these? Ps say what they know. Class agrees/disagrees or suggests other properties or descriptions. T has:</p> <ul style="list-style-type: none"> • real objects: e.g. rectangular boxes, large dice, ball, pencil, hexagonal and cylindrical tins, briefcase, candle, globe, etc. • pictures: e.g. church, house, pyramid, igloo, tree, wheelbarrow, etc. • line drawings, e.g. BB:  <p>Ps might mention, e.g.:</p> <ul style="list-style-type: none"> • 3-D shapes: size, colour, material, uses, solid, box, sphere, cylinder, cuboid, cube, pyramid, prism, cylinder, curved or plane faces, straight or curved edges, number of vertices, etc. • 2-D (or plane shapes): names of shapes, polygons, straight or curved sides or mixture of the two, number of sides, perimeter, vertices, regular or irregular, closed or open, parallel or perpendicular sides, right angles, etc. • 1-D: lines, straight or curved, horizontal, vertical, slanting, crosses itself or not, etc. <p style="text-align: right;"><i>10 min</i></p>	<p>Notes</p> <p>Whole class activity (Or objects could be on a theme, e.g. Christmas)</p> <p>T holds up or points to each in turn and Ps say something about them. Encourage Ps to speak in sentences.</p> <p>Gradually elicit the geometric features.</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Involve the majority of Ps. Praise all contributions.</p> <p>Extra praise for 'clever' features, such as symmetry</p> <p>N.B. Objects, pictures, drawings and features can be limited according to ability of Ps. There is no need to cover everything!</p>
<p>2</p>	<p>Geometric shapes 2</p> <p>T has various models to show and also drawings of them on BB, e.g.</p>  <p>a) What are the geometric names of these solids?</p> <p>T points to each in turn and Ps shout out its name if they know it. T writes it on BB.</p> <p>How many faces (edges, vertices) does it have?</p> <p>[Names: 1: cone; 2: cuboid; 3: cube; 4: prism (triangular-based); 5: sphere; 6: prism (hexagonal-based); 7: cylinder; 8: cuboid; 9: pyramid (square-based); 10: cylinder]</p> <p>b) Which of the solids has:</p> <ol style="list-style-type: none"> at least one plane (flat) face (1, 2, 3, 4, 6, 7, 8, 9, 10) at least one face which is a triangle (4, 9) at least one face which is a circle (1, 7, 10) all its faces plane (flat) (2, 3, 4, 6, 8, 9) at least one face which is a rectangle (2, 3, 4, 6, 8, 9) all its faces rectangles (2, 3, 8) at least one face which is a square (3, 9) all its faces square? (3) <p style="text-align: right;"><i>20 min</i></p>	<p>Whole class activity</p> <p>T has set of solids to match those drawn on BB or on enlarged copy master .</p> <p>(If possible, Ps also have a set of solids and/or copies of sheet on desks.)</p> <p>Or T could have names on flash cards stuck to side of BB and Ps come to BB to choose and say the correct name.</p> <p>Discussion on properties.</p> <p>Ps come to BB or dictate to T Class agrees/disagrees</p> <p>In v), elicit that a square is also a rectangle.</p> <p>Praising, encouragement only</p> <p>Feedback for T</p>

<p>Y4</p>		<p><i>Lesson Plan 46</i></p>
<p>Activity</p> <p>3</p>	<p>Angles</p> <p>Ps have 3 roughly torn pieces of paper and 2 straws on desks. T has large sheets for demonstration.</p> <p>a) i) Take one piece of paper and fold it to make a <u>right angle</u>. Show it to me . . . now! P who responded correctly demonstrates to those who did not (or T demonstrates). Corrections made. T draws angle on BB. (Ps can draw and label angle in <i>Ex. Bks.</i>)</p> <p>ii) Take another piece of paper and fold it to make an angle <u>smaller</u> than a right angle. Show it to me . . . now! P who responded correctly demonstrates to those who did not (or T demonstrates). Corrections made. An angle smaller than a right angle is called an <u>acute angle</u>. T draws angle on BB. (Ps can draw and label angle in <i>Ex. Bks.</i>)</p> <p>iii) Take the 3rd piece of paper and fold it to make an angle <u>larger</u> than a right angle. Show it to me . . . now! P who responded correctly demonstrates to those who did not (or T demonstrates). Corrections made. An angle larger than a right angle is called an <u>obtuse angle</u>. T draws angle on BB. (Ps draw and label angle in <i>Ex. Bks.</i>)</p> <p>b) Everyone stand up! Hold your 2 straws so that they are:</p> <p>i) parallel to each other . . . now! T corrects Ps who are wrong. Who can explain what parallel means? (Lines stay the same distance apart, however far they are extended)</p> <p>ii) crossing each other . . . now! </p> <p>iii) crossing each other but are also perpendicular . . . now! T corrects Ps who are wrong. Who can explain what perpendicular means? (The lines are at right angles to one another (or form an angle of 90°).</p> <p>c) With your 2 straws, make a right (acute, obtuse) angle . . . now! Look at your neighbour's straws and correct them if they are wrong.</p> <p>d) Open your <i>Pb</i> (<i>Ex Bk</i>) so that the two sides:</p> <p>i) are perpendicular . . . now! What angle do they make? (right)</p> <p>ii) make an angle less than a right angle . . . now! What is this kind of angle called? (acute)</p> <p>iii) make an angle greater than a right angle . . . now! What is this kind of angle called? (obtuse)</p> <p style="text-align: right;">26 min</p>	<p>Notes</p> <p>Whole class activity but folding done individually</p> <p>Angles shown in unison</p> <p>BB:   right angle</p> <p>  acute angle</p> <p>  obtuse angle</p> <p> parallel lines</p> <p>Ps find examples of such lines in the classroom.</p> <p>BB:  perpendicular lines lines</p> <p></p> <p></p> <p> Correcting, praising</p>
<p>4</p>	<p>PbY4a, page 46</p> <p>Q.1 Read: a) <i>How many rectangles are in this diagram?</i> b) <i>How many rectangles would be in 874 such diagrams?</i> c) <i>What is the area of the diagram?</i> d) <i>What is the perimeter of the diagram?</i></p> <p>Deal with one part at a time. Ps could show results on scrap paper or slates on command. Mistakes discussed and corrected.</p> <p>Solution:</p> <p>a) 9 b) 7623 c) $A = 4$ square units d) $P = 8$ units</p> <p style="text-align: right;">30 min</p>	<p>Individual work, monitored (helped)</p> <p>Diagram drawn on BB: </p> <p>Calculation done on scrap paper or in <i>Ex. PbY4a, page 46

a) Ps have copies of copy master on desks.

Mark the grid points which are 1 cm away from

- i) point A ii) line segment *e* iii) line *f*.

Review at BB with whole class. Ps agree on number of points.

Point out that in iii), only 18 points can be shown on this grid but if you imagine the line going on and on in both directions, there will be a never-ending (infinite) number of points. T shows (or elicits if some Ps remember it) the symbol for infinity (a point which can never be reached): ∞

Solution:

i) point A

4

ii) line segment *e*

12

iii) line *f*

18

here, but really ∞

b) Q.4 Read: *Measure 2 cm from point C on the lines. Join up the points. What shape have you made?*

I will give you a minute, then you must write only one word on your slates which describes both shapes and show me it when I say.

Show me . . . now! (rectangle)

What other shape could you have written for b)? (Square)

T confirms by showing already prepared solution.

Solution:

a)

b)

45 min

Notes

Individual (or paired) work, monitored, helped

Use enlarged copy master or OHP for demonstration only.

Ps come to BB to show possible points. Class agrees/ disagrees. Mistakes corrected and omissions added.

Whole class discussion about the concept in maths of a line never ending (going on and on to infinity).

BB: ∞
infinity

Individual work, monitored

Ps use rulers to measure in a) as points are not on grid inter-sections.

In unison

Class shouts out in unison.

Drawn on SB or OHT or use enlarged copy master for demonstration only!

Agreement, self-correcting, praising

Y4

R: Parallel, perpendicular lines. Calculations
 C: **Shapes (1-D, 2-D). Right angles**
 E: *Problems*

Lesson Plan
47

Activity

1

Multiplication practice

a) How many triangles can you count in these shapes?

Ps come to BB to show the triangles. (T helps them to draw each one on BB if necessary.) Class agrees on final number.

b) How many triangles could we count in 412 such shapes? Ps do calculations in *Ex. Bks* then show results, one part at a time, on command. Ps who responded incorrectly come to BB to work through calculation with help of class. Corrections made.

BB:

	4	1	2
		×	6
2	4	7	2
			1

$412 \times 10 = 4120$

	4	1	2
		×	16
2	4	7	2
+	4	1	2
6	5	9	2

Whole class activity but individual calculation
 Drawn on BB or use enlarged copy master or OHP
 Ps might remember iii) from *Lesson 45*.

Discussion, reasoning, agreement, praising

Individual work, monitored
 Responses shown on scrap paper or slates in unison.

or C:
 $412 \times 16 = 412 \times (10 + 6)$
 $= 4120 + 2472$
 $= \underline{6592}$

Individual work, monitored
 Reasoning, agreement, praising

[N.B. $9600 \div 16 \neq 9600 \div 10 + 9600 \div 6$
 $= 960 + 1600 = 2560!$]

Extension

c) On how many such shapes could we count 9600 triangles?
 Elicit that the operation needed is division. Ps do calculations in *Ex. Bks*. Review as in b) whole class.

BB:

	1	6	0	0
6	9	6	0	0
				3

$9600 \div 10 = 960$

			6	0	0
1	6	9	6	0	0
		-	9	6	
			0	0	0

10 min

2

Parallel and perpendicular lines

Let's mark the parallel and perpendicular lines on these diagrams.

Ps come to BB to colour over in different colours (or mark with arrowheads) the sets of parallel lines, then to draw squares at all the right angles. Class points out errors or omissions.

Who can think of other questions to ask about the diagrams? e.g.

In each diagram:

- i) What shapes can you see?
- ii) How many rectangles (squares, triangles) can you see?
- iii) How many pairs of parallel (perpendicular) lines can you count?
etc.

Class (T) decides which ones to solve (some with T's help).

20 min

Whole class activity

Drawn on BB or use enlarged copy master or OHP

At a good pace

Agreement, praising

Extra praise for 'clever' questions.

e.g.in a):

- i) rectangles
- ii) 9 rectangles
- iii) 6 pairs of parallel lines
9 pairs of perpendicular lines

Y4

Lesson Plan 47

Activity

4

(Continued)

b) *The River Danube is 2840 km long and the River Nile is 6670 km long. How much longer is the River Nile than the River Danube?*

Data: RD: 2840 km RN : 6670 km

Plan: 6670km – 2840 km E: 7000 – 3000 = 4000 (km)

Answer: The River Nile is 3820 km longer than the River Danube.

c) *The deepest point in the Pacific Ocean is near Japan and is 10 680 m below sea level. The highest point in Japan is 3776 m above sea level. What is the difference between these two points?*

Data: DP: 10 680 m below sea level

HP: 3776 m above sea level

Plan: 10 680 m + 3776 m

14 456 m = 14 km 456 m

$$\begin{array}{r}
 10680 \\
 + 3776 \\
 \hline
 14456 \\
 \hline
 \end{array}$$

Answer: The difference between the two points is 14 km 456 m.

31 min

Notes

$$\begin{array}{r}
 6670 \\
 - 2840 \\
 \hline
 3830
 \end{array}$$

Draw a diagram on BB to aid understanding.

5

PbY4a, page 47

Q.2 Read: *Mark the parallel and perpendicular lines on this capital E.*

Ps mark the parallel lines with arrowheads (or colour over in the same colour) and draw (or colour) squares to show the perpendicular lines (right angles).

Review at BB with whole class. Ps come to BB. Class agrees/disagrees. Mistakes corrected.

Read: *We started to draw the letter E on this grid in different positions and sizes. Complete the drawings.*

Set a time limit. Ps who finish first come to BB or OHP to complete the drawings. Review with whole class. Class agrees/disagrees with solutions. Mistakes discussed/corrected.

Solution: e.g.

Accept any correct completion.

36 min

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

Agreement, self-correcting, praising

Agreement, self-correction, praising

Which shapes are similar?
(All of them)

Which shapes are congruent?
[a), b), c) and g) on solution opposite but Ps might have different ones]

Revise what similar and congruent mean if Ps cannot remember.

Y4		Lesson Plan 47
<p>Activity</p> <p>6</p>	<p>PbY4a, page 47</p> <p>Q.3 Read: <i>List the polygons for which each statement is true.</i></p> <p>What is a polygon? (A plane shape with straight sides.) Let's see if you can do them all in 3 minutes! . . . Stop!</p> <p>Review at BB with whole class. P reads question, then T points to each diagram in turn. Class indicates whether it should be included (e.g. thumbs up or down). T writes lists on BB. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p>  <p>a) <i>It has a right angle.</i> (1, 4, 5, 6, 7) b) <i>Every angle is a right angle.</i> (4, 6) c) <i>It has no right angles.</i> (2, 3, 8) d) <i>It has an angle which is not a right angle.</i> (1, 2, 3, 5, 7, 8) e) <i>Every angle is a right angle but it is not a rectangle.</i> (–)</p> <p>Extension</p> <p>Which shapes have parallel lines? Y4

Lesson Plan 48

Activity

4

Diagonals 2

Ps each have a square and rectangular sheet of paper on desks.

a) Fold your square along its diagonals. Open it out. How many diagonals can you see? (2) How many angles have you made at its centre? (4) Measure them with your folded right angle. What kind of angles are they? (right angles) What can you say about the 2 diagonals of a square? (They are perpendicular.)

b) Now fold your square along its diagonals. Open it out. How many diagonals can you see? (2) How many angles have you made at its centre? (4) Measure them with your folded right angle. What kind of angles are they? (2 acute angles and 2 obtuse angles) Ps write initial letters in each angle.

Elicit that these diagonals are not perpendicular.

20 min

Notes

Whole class activity but individual folding.

T demonstrates and Ps copy.

Agreement, praising

5

PbY4a, page 48

Q.1 Read: *In your exercise book, make a plan, estimate, calculate, check and write the answer as a sentence.*

Deal with one part at a time. Ps read the question themselves and solve it in *Ex. Bks.* Set a time limit for each question.

Review with whole class. Ps come to BB to show their solution, explaining reasoning. Class agrees/disagrees.

Mistakes discussed and corrected.

Solutions:

a) *The distance between Budapest and London (UK) is 1450 km. It is 5950 km less than the distance between Washington and Budapest. How far is Washington from Budapest?*

Plan: B → L: 1450 km B → W: 1450 km + 5950 km

E: 1000 + 6000 = 7000

C:

1	4	5	0	
+	5	9	5	0
	7	4	0	0

1

Answer: Washington is 7400 km from Budapest.

b) *A tourist drew this rough map of where he had travelled.*

i) *How far did he travel from Lisbon to Budapest?*

Plan: LM + MP + PF + FV + VB

E: 600 + 1300 + 600 + 700 + 200 = 3400 (km)

Answer: He travelled 3434 km.

ii) *Which part of his route was longer, Lisbon to Paris or Paris to Budapest?*

Plan: LP = 647km + 1258 km = 1905 km

PB = 560 km + 727 km + 242 km = 1529 km

Answer: Lisbon to Paris was longer.

Individual work, monitored, helped

T could have large map of to show the countries and cities.

Reasoning, agreement, self-correcting, praising

Ps could draw a diagram for part a) if it will help them:

Check with another operation, or with a calculator, especially in b) i) below.

Diagram drawn on BB or use enlarged copy maser or OHP

C:

6	4	7		
1	2	5	8	
	5	6	0	
	7	2	7	
+		2	4	2

L to B:

3	4	3	4
---	---	---	---

2 2 2

C:

6	4	7	
1	2	5	8
1	9	0	5

1 1

P to B:

5	6	0	
7	2	7	
2	4	2	
1	5	2	9

1

C:

1.

1	9	0	5	
-	1	5	2	9
	3	7	6	

2.

6	4	7	
-	5	6	0
	8	7	

Extension

- How much longer? (1905 km – 1529 km = **376 km**)
- Which was longer, L → P or M → F? (LP > MF)
(N.B. M → P is common to both) 87 km

28 min

Y4

Lesson Plan 48

Activity

6

PbY4a, page 48

Q.2 Read: *In a dress pattern, there are these different shapes of pocket to choose from.*

List the shapes for which each statement is true.

Set a time limit. Review with whole class. P reads each statement and Ps dictate letters to T. Class agrees/disagrees or adds omissions. Mistakes discussed and corrected

Solution:

- a) *It has only straight sides.* (A, B, D, F, G, H, J, L)
What do we call plane shapes with straight sides? (Polygons)
- b) *It has at least one straight side.* (A, B, C, D, E, F, G, H, J, K, L)
- c) *It has only curved lines.* (I)
- d) *It is a pentagon.* (D, J)
- e) *It has parallel sides.* (A, B, D, F, H, J, L)
- f) *It has perpendicular sides.* (B, D, E, F, H, J, L)
- g) *It is a quadrilateral.* (A, B, F, G, L)
- h) *It is a hexagon.* (H)
- i) *It is a rectangle.* (F, L)
- j) *It is a square.* (L)

Individual work, monitored, helped

Shapes drawn on BB or use enlarged copy master or OHP

Discussion, reasoning, agreement, self-correction, praising

Feedback for T

Elicit that:

pentagon: a plane shape with 5 straight sides

quadrilateral: a plane shape with 4 straight sides

hexagon: a plane shape with 6 straight sides

square: a regular rectangle

Whole class activity

Praise all positive contributions.

Discussion, agreement, praising

Extension

Let's put the shapes into sets. How could we do it? Ps suggest ways and T chooses one. T draws diagrams on BB and Ps suggest labels. Ps come to BB to write letters in appropriate set.

BB: e.g.

35 min

7

Compass points

T has a large N stuck to the wall of the classroom which faces North (or if no wall faces north, use the BB wall).

Everyone stand up and face North. T gives instructions on how Ps should turn. Through how many right angles have you turned?

Class shouts out in unison or T chooses Ps at random. e.g.

- a) Turn to the right:
 - i) from N to face E (1 right angle)
 - ii) from E to face W (2 right angles)
 - iii) from W to face NW (half a right angle)
- b) Turn to the left:
 - i) from N to face SW (1 1/2 right angles)
 - ii) from SW to face SE (1 right angle)
 - iii) from S to face W (3 right angles)

etc. Ps can give instructions too!

Whole class activity

Revise compass points first if necessary.

At a good pace

Agreement, praising

In good humour!

Ps could also say whether the angle is acute or obtuse where relevant.

40 min

Y4*Lesson Plan 48***Activity****8****PbY4a, page 48**

Q.3 Read: *Draw a line through the point given so that it is parallel to the other two lines*

Review at BB with whole class. Ps finished first come to BB to draw their solutions. Who agrees? Who drew a different line? etc. Deal with all cases. Mistakes corrected.

Solution:

Where in the classroom can you see sets of parallel lines?

45 min

Notes

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

Ps should use rulers to draw the lines and check distances at either end by measuring or counting the grid units.

Agreement, self-correcting, praising

Elicit that parallel lines need not be equal in length but must be at the same angle, and that they will never meet, however far they are extended.

<p>Y4</p>	<p>R: Calculations C: Shapes, polygons. Angles. Parallel and perpendicular lines E: Problems. Constructions</p>	<p style="text-align: right;"><i>Lesson Plan</i> 49</p>
<p>Activity 1</p>	<p>Quadrilaterals T has BB already prepared. How many quadrilaterals and triangles can you count on each diagram? Ps come to BB to point and count and name the shapes if they know them (e.g. square, rectangle, right-angled triangle). Class agrees/disagrees. If problems, T helps by drawing each of the sub-shapes separately. BB: a)  Q: 2 (both squares) T: 4 b)  Q: 4 (1 rectangle) T: 4 c)  Q: 14 (5 rectangles) T: 12 Find the parallel and perpendicular lines. Ps come to BB to mark them. Class points out any they have missed. T helps with notation. <p style="text-align: right;">5 min</p></p>	<p style="text-align: center;">Notes</p> <p>Whole class activity Drawn on BB or use enlarged copy master or OHP At a good pace Ps can use edges of ruler or folded right angle to check any they are unsure about. Agreement, praising Who can find a pentagon (hexagon) in the diagrams?</p>
<p>2</p>	<p>Compass points and angles Everyone stand up! Let's suppose the BB is North. Everyone face North. a) Follow my instructions then tell me which compass point you are facing. (Ps could write on slates and show on command.) e.g. Turn to the right through 1 right angle. In which direction are you facing? (E) Turn to the right through 2 right angles. (W) Turn to the left through half a right angle. (SW) etc. b) Everyone face North again! Turn to the right to face South. Through how many right angles did you turn? (2) Face N again. Turn to the left to face SW. Through how many right angles did you turn? (1 and a half) etc. <p style="text-align: right;">10 min</p></p>	<p>Whole class activity At a good pace In good humour! Praising, encouragement only Ps can give the instructions too!</p>
<p>3</p>	<p>Solids and shapes a) Which solid could be made from which set of plane shapes? Ps come to BB to join up or write the matching pairs, explaining reasoning. Class agrees/disagrees. BB: a)  b)  c)  d)  e)  f)  ----- 1  2  3  4  5  6  BB: 1-e, 2-d, 3-a, 4-f, 5-c, 6-b Who remembers the names of these solids? [1: cuboid, 2: square-based pyramid, 3: cuboid, 4: triangle-based pyramid, 5: cube (regular cuboid), 6: triangle-based prism]</p>	<p>Whole class activity T could have actual solids to show to class. (If possible, Ps have small-sized set of shapes and solids on desks too.) Drawn on BB or use enlarged copy master or OHP Discussion, reasoning, agreement, praising At a good pace Extra praise for Ps who remember the names of 2, 4 and 6</p>

Y4

Lesson Plan 49

Activity

3

(Continued)

b) Let's count the edges, faces and vertices of each solid and show the information in this table. Ps come to BB or dictate to T.
Class agrees/disagrees. Do you notice a connection between the rows?

BB:

	1	2	3	4	5	6
						
Edges	12	8	12	6	12	9
Faces	6	5	6	4	6	5
Vertices	8	5	8	4	8	6

- Which of the solids are made from congruent shapes? (4, 5)
- Which of them have 6 faces which are rectangles? (1, 3 and 5)
- How many of a cuboid's faces can be square? (0 as in cuboid 1, or 2 as in cuboid 3, or 6 as in the cube)
- Who can think of other things to say about the shapes? (e.g. Ps might point out parallel edges or faces, perpendicular edges or faces, congruent faces, number of edges meeting at each vertex, etc.)

Extension

T tells class that a solid with many plane faces is called a polyhedron. (Compare with a polygon, which is a plane shape with many straight sides.)

This solid (T holds up the triangle-based pyramid) is also called a tetrahedron, because it has 4 plane faces (tetra means 4), but because all its 4 plane faces are congruent (triangles with equal sides and angles), it is called a regular tetrahedron.

This solid (T holds up a cuboid) is also called a hexahedron, because it has 6 plane faces (hexa- means 6), but this solid (T holds up a cube) is a hexahedron with all its 6 plane faces congruent (equal squares), so it is called a regular hexahedron.

24 min

Notes

Whole class activity

Table drawn on BB or use enlarged copy master or OHP

At a good pace

Agreement, praising

Elicit that:

$$BB: e + 2 = f + v$$

Discussion involving as many Ps as possible.

Encourage Ps to speak in sentences and to try to use the correct vocabulary.

Praise all positive contributions

T repeats more clearly when necessary.

Whole class discussion on geometric names of solids.

BB: poly- means 'many'
-hedron means 'a solid with plane faces'

tetra- means '4'

hexa- means '6'

polyhedron, tetrahedron, hexahedron

4

PbY4a, page 49

Q.1 Read: *Do the calculation for b) and c) in your exercise book.*

- How many unit cubes does this cube contain?
- How many unit cubes would 1176 of these cubes contain?
- How many of these large cubes could be built from 9648 unit cubes?

Deal with one part at a time. Ps could show results on scrap paper or slates on command. Mistakes discussed/corrected.

Solution: a) 8 b) 9408 c) 1206

How many such large cubes would contain 9501 unit cubes?

Ps come to BB or dictate to T, explaining reasoning

BB:

	1	1	8	7	r 5	Check:	1	1	8	7
	8	9	5	0	1					
		1	7	6	5					

$$9501 = 8 \times 1187 + 5$$

$$= 9496 + 5 = 9501$$

Answer: 1187 large cubes would contain 9496 unit cubes and 5 unit cubes would be left over.

29 min

Extension

Individual work, monitored helped

Diagram drawn on BB and/or Ps have such cubes on desks.

Calculations done in Ex. Bks.

Reasoning, agreement, self-correction, praising

BB:

b)

1	1	7	6
		× 8	
9	4	0	8
1	6	4	

c)

	1	2	0	6
8	9	6	4	8
	1		4	

Whole class activity

Discussion, reasoning, agreement, praising

Y4

Lesson Plan 49

Activity

5

*PbY4a, page 49*Q.1 a) Read: *In each diagram, mark*

- *the right angles in red like this,*
- *angles smaller than a right angle in blue like this,*
- *angles larger than a right angle in green like this.*

T could do Shape B with the whole class first if necessary.

Ps colour remaining shapes. Set a time limit. Review at BB with whole class. Ps come to BB or T points to each angle in turn and Ps say which colour (or what kind of angle) it is. Mistakes corrected.

Elicit that the *blue* angles are acute and the *green* angles are obtuse angles.

Solution:b) Read: *List the letters of the shapes for which each statement is true.*

Set a time limit. Review with whole class. P reads each statement and Ps dictate letters to T. Class agrees/disagrees or adds omissions. Mistakes discussed and corrected

Solution:

- | | |
|---|-----------------|
| i) <i>It is a square.</i> | (F) |
| ii) <i>It is a rectangle.</i> | (C, F) |
| iii) <i>It is a quadrilateral.</i> | (A, B, C, F) |
| iv) <i>It is a triangle.</i> | (D, E, H) |
| v) <i>It has at least 1 right angle.</i> | (B, C, D, F) |
| vi) <i>Every angle is a right angle.</i> | (C, F) |
| vii) <i>It has at least one angle smaller than a right angle.</i> | (A, B, D, E, H) |
| viii) <i>All its angles are smaller than a right angle.</i> | (E) |
| ix) <i>It has at least one angle larger than a right angle.</i> | (A, B, G, H) |
| x) <i>All its angles are larger than a right angle.</i> | (G) |

36 min

Notes

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

Ps check angles they are unsure about with corner of ruler or folded right angles.

Agreement, self-correcting, praising.

What are the names of the polygons?

A and B: quadrilaterals

C: rectangle

D: right-angled triangle

E: acute-angled triangle

F: square

G: (regular) hexagon

H: obtuse-angled triangle

Individual work, monitored, helped (or whole class activity if time is short)

Drawn on BB or use enlarged copy master or OHP

Agreement, self-correcting, praising

Y4		<i>Lesson Plan 49</i>
Activity 6	<p><i>PbY4a, page 49,</i></p> <p>Q.3 Read: <i>Two sides of a quadrilateral have been drawn.</i> <i>Complete the shape so that:</i></p> <ol style="list-style-type: none"> <i>it has at least one right angle</i> <i>2 of its sides are parallel</i> <i>it has 2 pairs of parallel sides.</i> <p>Set a time limit. Review at BB with whole class. Ps come to BB to draw lines and mark the features. Who agrees? Who drew a different shape? etc. Mistakes discussed and corrected.</p> <p><i>Solution: e.g.</i></p>  <p style="text-align: right;"><i>40 min</i></p>	<p style="text-align: center;">Notes</p> <p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>Reasoning, agreement, self-correcting, praising</p> <p>Other solutions are possible.</p> <p>Extension</p> <p>T tells class that a quadrilateral in which both pairs of opposite sides are parallel (as in RH diagram) is called a BB: <u>parallelogram</u></p>
7	<p>Secret shapes</p> <ol style="list-style-type: none"> Draw a shape in your <i>Ex. Bks.</i> T chooses Ps to stand up and describe their shape. Rest of class must work out what it is. I am thinking of a shape. Ask me questions to find out what it is. I can answer only 'yes' or 'no'. (e.g. <u>square</u>: Is it a plane shape? (yes) Is it a polygon? (yes) Does it have more than 4 sides? (no) Does it have a right angle? (yes) Are all its angles right angles? (yes) Are all its sides equal? (yes) It is a square! (yes) <p>Repeat for other shapes if there is time. Ps can think of a shape and answer the questions too (with T's help).</p> <p style="text-align: right;"><i>45 min</i></p>	<p>Whole class activity</p> <p>Encourage Ps to speak in sentences and to try to use mathematical terms. T helps with descriptions if necessary.</p> <p>In good humour!</p> <p>Encourage logical questioning. Ps can keep note of clues on scrap paper.</p> <p>Praising, encouragement only</p>
