### Money model

Several countries have larger denomination bank notes than we have in the U.K. (T could explain that their basic units of currency have less value than the £ or pence in the U.K, so they need more of them.) Let's complete the missing items. Ps come to BB to explain diagrams and fill in what is missing. Rest of class writes the equations with words and numbers (no need to draw the money) in *Ex. Bks*.

**BB:**

a) \[ \begin{array}{cccc} & 1 & 0 & 0 \\ \hline T & H & T & U \\ \hline 10 & 0 & 0 & 0 \\ \hline \end{array} \]

1 ten = \[ \begin{array}{cccc} & 1 & 0 & 0 \\ \hline T & H & T & U \\ \hline 1 \times 10 & = 10 & \times 1 \times 1 \end{array} \]

b) \[ \begin{array}{cccc} & 1 & 0 & 0 \\ \hline T & H & T & U \\ \hline 1 & 0 & 0 & 0 \\ \hline \end{array} \]

1 hundred = \[ \begin{array}{cccc} & 1 & 0 & 0 \\ \hline T & H & T & U \\ \hline 1 \times 100 & = 10 \times 1 \times 1 \end{array} \]

c) \[ \begin{array}{cccc} & 1 & 0 & 0 & 0 \\ \hline T & H & T & U \\ \hline 1 & 0 & 0 & 0 \\ \hline \end{array} \]

1 thousand = \[ \begin{array}{cccc} & 1 & 0 & 0 & 0 \\ \hline T & H & T & U \\ \hline 1 \times 1000 & = 10 \times 1 \times 1 \end{array} \]

d) \[ \begin{array}{cccc} & 1 & 0 & 0 & 0 \\ \hline T & H & T & U \\ \hline 1 & 0 & 0 & 0 \\ \hline \end{array} \]

1 ten thousand = \[ \begin{array}{cccc} & 1 & 0 & 0 & 0 \\ \hline T & H & T & U \\ \hline 1 \times 10000 & = 10 \times 1 \times 1 \end{array} \]

e) \[ \begin{array}{cccc} & 3 & 5 & 2 & 4 \\ \hline T & H & T & U \\ \hline 3 & 5 & 2 & 4 \\ \hline \end{array} \]

3 thousand = \[ \begin{array}{cccc} & 3 & 5 & 2 & 4 \\ \hline T & H & T & U \\ \hline 3 \times 1000 & = 3 \times 1 \times 1 \end{array} \]

### Place value

How much is there altogether? Let's write it in different ways. Ps come to BB to count how much there is and to write it as digits in the place value table. Class agrees/disagrees.

Let's write it in other ways. T starts each line and Ps come to BB to continue. Class points out errors. Ps write equations in *Ex. Bks* too.

**BB:**

\[ 3524 = 3000 + 500 + 20 + 4 = 3\text{Th} + 5\text{H} + 2\text{T} + 4\text{U} = 3 \times 1000 + 5 \times 100 + 2 \times 10 + 4 \times 1 = \text{three thousand five hundred and twenty four} \]
Y4

Activity

3  Vocabulary
Let’s revise the names of the different kinds of values connected with numbers. First let’s read the number on the BB. (‘5 thousand, one hundred and seventy eight’)

BB:

```
<table>
<thead>
<tr>
<th>Place value</th>
<th>Digit value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thousands</td>
<td></td>
</tr>
<tr>
<td>Hundreds</td>
<td>5</td>
</tr>
<tr>
<td>Tens</td>
<td>1</td>
</tr>
<tr>
<td>Units</td>
<td>7</td>
</tr>
</tbody>
</table>
```

T points to the row of the table containing the ‘thousands, hundreds’, etc.

A, what kind of value does this row show? (Place value)

Come and write it in the table.

Who can fill in the names missing from the other two boxes? Ps come to BB.

Who agrees? etc.

20 min

4  Writing numbers

Write these numbers as digits in your Ex. Bks.

T dictates some numbers (e.g. 7403) and writes some numbers in words on BB. (e.g. six thousand, four hundred and eighty two)

Review with whole class. Ps come to BB to write as digits.

Class agrees/disagrees.

P points to a digit and asks what its place (digit, real) value is and chooses another P to answer.

25 min

5  PbY4a, page 31

Q.1 Read: Write each amount in the place-value table and then in the box.

Review at BB with whole class. Ps come to BB or dictate to T.

Class agrees/disagrees.

Mistakes discussed and corrected.

Solution:

a)  

```
<table>
<thead>
<tr>
<th>Th H T U</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 6 4 7</td>
</tr>
</tbody>
</table>
```

b)  

```
<table>
<thead>
<tr>
<th>Th H T U</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 0 5 3</td>
</tr>
</tbody>
</table>
```

c)  

```
<table>
<thead>
<tr>
<th>Th H T U</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 6 0 8</td>
</tr>
</tbody>
</table>
```

Let’s write these numbers in increasing order. Ps dictate to T or come to BB. Let’s say the inequality.

28 min

6  PbY4a, page 31

Q.2 Read: Write these numbers with words in your exercise book

Deal with one row at a time. Review with whole class.

Ps read out what they have written. T uncovers prepared BB or SB or OHT. Class points out errors. Let’s write them in increasing (decreasing) order. Ps come to BB or dictate to T.

Individual work, monitored, helped

Agreement, self-correction of words and spelling, praising

Whole class activity

34 min

Notes
Whole class activity

Drawn on BB or use enlarged copy master or OHP

Number read in unison.

Or Ps stick prepared name cards in correct place on digram.

Agreement, praising

T writes other numbers on BB and points to a digit randomly.

What is its digit value (place value, real value)?

Praising, encouragement only

Individual work, monitored, but class kept together.

Ps can say or write the numbers too!

Agreement, self-correcting, praising

Feedback for T

Individual work, monitored, helped

Drawn on BB (or model money stuck to BB) or use enlarged copy master or OHP

Agreement, self-correction, praising.
## Activity

### Lesson Plan 31

**Q.3 Read:** Show each number as the sum of thousands, hundreds, tens and units.

T could do the first number with whole class as a model for Ps to follow if necessary. Set a time limit.

Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

**Solution:**

<table>
<thead>
<tr>
<th>T</th>
<th>H</th>
<th>U</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>3</td>
<td>4</td>
<td>0</td>
</tr>
<tr>
<td>8</td>
<td>0</td>
<td>2</td>
</tr>
<tr>
<td>7</td>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>8</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>6</td>
<td>0</td>
<td>3</td>
</tr>
</tbody>
</table>

List the numbers in decreasing order in your Ex. Bks.

Review at BB with whole class. Ps dictate to T or come to BB. Class points out errors. Mistakes discussed and corrected.

BB: 8025 > 8008 > 7205 > 6030 > 3407 > 1634

---39 min---

### Extension

**PbY4a, page 31**

**Q.4 Read:** Fill in the missing digits.

Set a time limit. Review at BB with whole class. Ps come to BB or dictate to T. Mistakes discussed and corrected.

**Solution:**

a) 2847 = $2 \times 1000 + 8 \times 100 + 4 \times 10 + 7 \times 1$

b) 6570 = $6 \times 1000 + 5 \times 100 + 7 \times 10 + 0 \times 1$

c) 4501 = $4 \times 1000 + 5 \times 100 + 0 \times 10 + 1 \times 1$

d) 6600 = $6 \times 1000 + 6 \times 100 + 0 \times 10 + 0 \times 1$

e) 965 = $9 \times 100 + 6 \times 10 + 5 \times 1$

f) 4059 = $4 \times 1000 + 0 \times 100 + 5 \times 10 + 9 \times 1$

g) 2874 = $2 \times 1000 + 8 \times 100 + 7 \times 10 + 4 \times 1$

Let's say the numbers in increasing order:

965 < 2847 < 2874 < 4059 < 4501 < 6570 < 6600

---45 min---
# Lesson Plan

## Tens, hundreds, thousands

Let's list:

a) the whole tens between 100 and 200
   
   (110, 120, 130, 140, 150, 160, 170, 180, 190)

b) the whole hundreds between 1000 and 2000
   
   (1100, 1200, 1300, 1400, 1500, 1600, 1700, 1800, 1900)

c) the whole thousands between 0 and 10 000 [20 000]
   
   (1000, 2000, 3000, 4000, 5000, 6000, 7000, 8000, 9000)  
   
   [10 000, 11 000, 12 000, 13 000, 14 000, . . ., 19 000]

### Notes

Whole class activity

Ps dictate numbers to T and T writes them on BB.

At a good pace

Agreement, praising

Continue to 20 000 if Ps want to try it.

Feeedback for T

---

## Numbers

Write the natural numbers I am describing in your Ex. Bks. What are natural numbers? (positive, whole numbers: 1, 2, 3, . . .)

| a)   | i) The greatest 1-digit number | (9) |
| b)   | i) The smallest 1-digit number | (1) |
|      | ii) The greatest 2-digit number | (99) |
|      | ii) The smallest 2-digit number | (10) |
|      | iii) The greatest 3-digit number | (999) |
|      | iii) The smallest 3-digit number | (100) |
|      | iv) The greatest 4-digit number | (9999) |
|      | iv) The smallest 4-digit number | (1000) |
|      | v) The smallest 5-digit number | (10 000) |

Review orally with whole class after part a) and after part b). Ps dictate numbers and class agrees/disagrees. Mistakes discussed/corrected.

### Notes

Individual work, but class kept together

T could have descriptions written on SB or BB or OHT

At a good pace

Agreement, self-correction, praising

---

## Sequence

Let's start at 1650 and write the next 9 terms if the terms are increasing by 15. Ps come to BB to write and say a number each. Class points out errors.

BB: 1650, 1665, 1680, 1695, 1710, 1725, 1740, 1755, 1770, 1785, 1800

Let's write them in Roman numerals. Ps come to BB, explaining reasoning. Class agrees/disagrees.

BB: MDCL, MDCLXV, MDCLXXX, MDCXCV, MDCXX, MDCXXXV, MDCCLX, MDCCLV, MDCCLXX, MDCCLXXV, MDCCC

### Notes

Whole class activity

At a good pace

Agreement, praising

Review Roman numerals first if necessary.

T covers up Arabic numbers, P points to a Roman number and chooses a P to read it.

---

## How many digits?

How many digits would we write if we wrote down all the natural numbers from:

| a)   | 1 to 9 | (9) |
| b)   | 10 to 99 | (180) |

Why do you think so?

There are 9 tens (as we do not count 0) and for every ten there are 10 possible units (0 to 9), so there are $9 \times 10 = 90$ 2-digit numbers, so the number of digits we would write is $90 \times 2 = 180$.

### Notes

Whole class activity

Ask several Ps what they think and why. T clarifies Ps' ideas and reasoning if necessary, or gives hints to set Ps thinking if nobody knows.

Agreement, praising

---
Activity

4 (Continued)

c) How many 3-digit numbers are there?  (900)
Why do you think so?
There are 9 hundreds (as we do not use 0) and for every hundred there are 10 possible tens and for every ten there are 10 possible units, so there are $9 \times 10 \times 10 = 900$ 3-digit numbers.
How many digits would we write if we wrote them all down?
(900 numbers, 3-digits each, so $900 \times 3 = 2700$ digits)

Extension

Q.1 Read: Write the numbers in the place-value table.
What does TTh mean? (Ten Thousands)
Set a time limit. Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.
Which number is the greatest (smallest)? (9064, 916)

Solution:

<table>
<thead>
<tr>
<th>TTh</th>
<th>Th</th>
<th>H</th>
<th>T</th>
<th>U</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eight thousand, three hundred and sixty three</td>
<td>8</td>
<td>3</td>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>Nine thousand and sixty four</td>
<td>9</td>
<td>0</td>
<td>6</td>
<td>4</td>
</tr>
<tr>
<td>Two thousand, seven hundred and five</td>
<td>2</td>
<td>7</td>
<td>0</td>
<td>5</td>
</tr>
<tr>
<td>Six thousand, nine hundred and seventy</td>
<td>6</td>
<td>9</td>
<td>7</td>
<td>0</td>
</tr>
<tr>
<td>Nine hundred and sixteen</td>
<td>9</td>
<td>1</td>
<td>6</td>
<td></td>
</tr>
<tr>
<td>$4 \times 1000 + 3 \times 100 + 8 \times 10 + 7 \times 1$</td>
<td>4</td>
<td>3</td>
<td>8</td>
<td>7</td>
</tr>
<tr>
<td>$2 \times 1000 + 9 \times 100 + 6 \times 10$</td>
<td>2</td>
<td>9</td>
<td>6</td>
<td>0</td>
</tr>
<tr>
<td>$5 \times 1000 + 4 \times 10 + 8 \times 1$</td>
<td>5</td>
<td>0</td>
<td>4</td>
<td>8</td>
</tr>
<tr>
<td>$1 \times 1000 + 5 \times 100 + 4 \times 1$</td>
<td>1</td>
<td>5</td>
<td>0</td>
<td>4</td>
</tr>
<tr>
<td>$8000 + 300 + 40 + 2$</td>
<td>8</td>
<td>3</td>
<td>4</td>
<td>2</td>
</tr>
</tbody>
</table>

• Write the numbers in decreasing order in your Ex. Bks.
• Write a number which would have a digit in the ten thousands column. (e.g. 23 671)

Extension

Write these numbers as digits in your Ex. Bks. T dictates:

a)  

i) 76 units (76)  

ii) 65 tens (650)

iii) 95 hundreds (9500)

b)  

i) 2 thousands and 35 hundreds (2350)

ii) 3 thousands and 18 hundreds (3180)

iii) 31 hundreds + 45 units (3145)

iv) 2 thousands + 506 tens (2506)

Deal with one part at a time. Review with whole class. Ps dictate to T or come to BB. Class agrees/disagrees. Mistakes discussed and corrected.

Notes

Ask several Ps what they think.
T helps to clarify reasoning, if necessary.

20 min

Individual work, monitored, helped

26 min

For quicker Ps.
Ps read their numbers aloud.
Agreement, praising

Lesson Plan 32

Individual work, monitored,
helped

Differentiation by time limit

**Y4**

**Activity 7**

**PbY4a, page 32**

Q.2  **Read:** *Fill in the missing digits and place values.*
Deal with part a) first, then part b).
Review at BB with whole class. Ps dictate to T or come to BB. Class agrees/disagrees. Mistakes discussed and corrected.

What is the real value of the greatest odd digit in each number? Ps come to BB to point to digit, say and write the value.

**Solution:**

a) i) 7312 = 7 Th + 3 H + 1 T + 2 U (7000)
ii) 4067 = 4 Th + 0 H + 6 T + 7 U (7)
iii) 9304 = 9 Th + 3 H + 0 T + 4 U (9000)

b) i) 6018 = 6 Th + 0 H + 1 T + 8 U (10)
ii) 3568 = 3 Th + 5 H + 6 T + 8 U (500)
iii) 2605 = 2 Th + 6 H + 0 T + 5 U (5)

---

**Extension**

**PbY4a, page 32**

Q.3  **Read:** *In your exercise book, write ten numbers:*

a) in increasing order, starting at 2478 and counting up 7 at a time.

(2478, 2485, 2492, 2499, 2506, 2513, 2520, 2527, 2534, 2541, 2548)

b) in decreasing order, starting at 5093 and counting down 50 at a time.

(5093, 5043, 4993, 4943, 4893, 4843, 4793, 4743, 4693, 4643)

c) in increasing order, starting at 4803 and counting up 120 at a time.

(4803, 4923, 5043, 5163, 5283, 5403, 5523, 5643, 5763, 5883, 6003)

**Extension**

How could we find the 21st term in a) without having to write all the terms? (2478 + 7 × 20 = 2478 + 140 = 2618)

---

**Activity 8**

**PbY4a, page 32, Q.4**

Read: *Join up the equal values.*

Ps come to BB to draw joining lines, explaining reasoning. Class agrees/disagrees. Ps can work in Pbs too if they wish (and can identify equal values by colouring instead of drawing lines).

**Solution:**

---

**Activity 9**

**PbY4a, page 32, Q.4**

Read: *Join up the equal values.*

Ps come to BB to draw joining lines, explaining reasoning. Class agrees/disagrees. Ps can work in Pbs too if they wish (and can identify equal values by colouring instead of drawing lines).

### Activity 9

**PbY4a, page 33**

Q.4 Read: Write in the boxes the numbers described.

Ps read questions themselves and fill in missing numbers.

Review orally with whole class. Mistakes discussed and corrected.

**Solution:**

a) *The smallest 4-digit:*  
   i) *number* (1000)  
   ii) *odd number* (1001)

b) *The greatest 4-digit:*  
   i) *number* (9999)  
   ii) *odd number* (9999)

c) *The greatest 4-digit number divisible by:*  
   i) 5 (9995)  
   ii) 10 (9990)

d) *The greatest 4-digit number divisible by 100 which has the same digit in its hundreds and thousands columns.* (9900)

**45 min**

### Notes

Individual work, monitored, helped  
Drawn on BB or use enlarged copy master or OHP  
Agreement, self-correction, Praising  
In unison

---

**Extension**

Ps tell class descriptions of other 4-digit numbers and class deduces what they are.
R: Mental calculation
C: Numbers up to 10 000. Rounding. Number line
E: Inequalities. Divisibility

**Activity**

1. **Chain calculations**
   - Listen carefully to each step. Do the calculation in your head and show me the final result (on scrap paper or slates) when I say.
   - a) Start with 1500, add 200, . . . subtract 300, . . . add 800, . . . subtract 900, . . . and add 700.
   - Show me the result . . . now! (2000)
   - P who made a mistake goes through the calculations again with help of class:
     
```
1500 + 200  =  1700,  1700 – 300  =  1400,  1400 + 800  =  2200,
2200 – 900  =  1300,  1300 + 700  =  2000
```
   - Similarly for
   - b) Start with 6400, subtract 1400, . . . double the result, . . . subtract 400, . . . add 300, . . . and subtract 500.
   - Show me the result . . . now! (9400)
   - P who made a mistake goes through the calculations with Ps' help.
   - Repeat with similar series of calculations if there is time.

   **5 min**

2. **Inequalities**
   - Which whole thousands can be written instead of the rectangles? Ps come to BB to list the numbers, explaining reasoning and showing on number lines. Class agrees/disagrees.
   - BB:
     a) $3000 < \[ \leq \] 8000
     b) $4285 < \[ < \] 7940
     c) $3200 > \[ > \] 1900

   **Extension**
   - How could we show on the number lines all the numbers (including fractions) which could be written instead of the rectangles?
   - T gives hints if Ps cannot remember from Y2. (Draw circles above the numbers at the extremes of the inequality. If the number is to be included, draw a closed (black) circle above it. If the number is not included, draw an open (white) circle above it. Join up the two circles with a thick horizontal line. All the numbers below the line are possible.)
   - BB:
     a) $3000 < \[ \leq \] 8000
     b) $4285 < \[ < \] 7940
     c) $3200 > \[ > \] 1900

   **Notes**
   - Whole class activity
   - Ps nod heads when they are ready for next step.
   - In unison
   - Reasoning, agreement, praising
   - Ps can think of them too.

   **Extension**
   - Drawn on BB or use enlarged copy master or OHP
   - At a good pace
   - Discussion, reasoning, agreement, demonstration, praising
   - Praise all positive contributions.
   - If Ps have no idea, T explains first inequality, then helps Ps with b) and c).
   - Positions of numbers in b) and c) need only be approximate.

© CIMT, University of Exeter
Lesson Plan 34

Y4

Activity

3 Numbers

a) Its next number is 5999. (5998 or 6000)
b) Its next smaller ten is 5850. (5851, 5852, ..., 5859, 5860)
c) Its next greater number is 6000. (5999)
d) It next greater whole ten is 7300. (7290, 7291, ..., 7298, 7299)
e) It rounds to 7300 as the nearest whole 10. (7295, 7296, 7297, 7298, 7299, 7300, 7301, 7302, 7303, 7304)

15 min

4 Which is less?
T has five 4-digit numbers written on BB. Let's compare the numbers and draw arrows towards the number which is less. Ps come to BB to draw arrows. Class points out errors.

BB:

1803

999

8614

5000

2940

What do you notice? (e.g. each number needs 4 arrows, as it is compared with 4 other numbers; 999 is the smallest number and has 4 arrows pointing towards it; 8614 is the greatest number and has 4 arrows pointing away from it; there are 10 arrows altogether)

20 min

5 PbY4a, page 34
Q.1 Read: Write the numbers in the correct places in the set diagrams. Elicit the similarity between the two diagrams. Ps come to BB to show the equivalent regions on each. Make sure that Ps know to use only the numbers in Set A.

Set a time limit. Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:
A = { 0, 5, 9, 12, 60, 67, 275, 354, 4030, 6455, 8000 }

a) Divisible by 5

<table>
<thead>
<tr>
<th>Even</th>
<th>60</th>
<th>0</th>
<th>4030</th>
<th>6000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Odd</td>
<td>275</td>
<td>5</td>
<td>6455</td>
<td></td>
</tr>
</tbody>
</table>

b) A

<table>
<thead>
<tr>
<th>Even</th>
<th>12</th>
<th>354</th>
</tr>
</thead>
<tbody>
<tr>
<td>Divisible by 5</td>
<td>0</td>
<td>60</td>
</tr>
<tr>
<td></td>
<td>4030</td>
<td>8000</td>
</tr>
</tbody>
</table>

What do you notice? (e.g. only numbers which have 5 or 0 as the units digit are divisible by 5)

Ps suggest other numbers which belong in each set.

26 min

Notes

Whole class activity
Ps suggest possible numbers and T lists them on BB.
Class agrees/disagrees.
Extra praise if Ps give all possible numbers in e).
Feedback for T

Whole class activity
At a good pace
Agreement, praising

Discuss why there should be $5 \times 4 \div 2 = 10$ (arrows)
(5 numbers, each compared with 4 other numbers, but each arrow deals with 2 numbers at a time)
Praise all contributions.

Individual work, monitored
Drawn on BB or use enlarged copy master or OHP
Initial discussion about the set diagrams.
Reasoning, agreement, self-correcting, praising

What kind of numbers are not divisible by 2? (Odd numbers)
**Lesson Plan 34**

**Activity**

6  
*PbY4a, page 34*

**Q.2** Read: *Round the numbers to the nearest ten, hundred and thousand.*

Set a time limit. Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

**Solution:**

- a) $2374 \approx 2370 \approx 2400 \approx 2000$
- b) $8527 \approx 8530 \approx 8500 \approx 9000$
- c) $6285 \approx 6290 \approx 6300 \approx 6000$
- d) $3600 \approx 3600 \approx 3600 \approx 4000$
- e) $9819 \approx 9820 \approx 9800 \approx 10000$
- f) $5499 \approx 5500 \approx 5500 \approx 5000$

Note the case of 5499 which rounds up to 5500 as the nearest ten and hundred but rounds down to 5000 as the nearest thousand.

Stress that a number cannot be rounded up twice! 5499 cannot be rounded up to 5500, then rounded up again to 6000 as the nearest thousand, because 5499 is nearer 5000 than 6000!

**32 min**

7  
*PbY4a, page 34*

**Q.3** Read: *Mark on the number lines those numbers which round to:*

- a) 4500, to the nearest hundred
- b) 2680, to the nearest ten
- c) 8000, to the nearest thousand.

Deal with one part at a time. Less able Ps need only mark the whole numbers with dots but more able Ps should try to use the notation to show all numbers.

Ps come to BB to show solutions. Class agrees/disagrees. Mistakes discussed and corrected.

Who can write an inequality about it? Ps can use letters or shapes or symbols to signify the possible numbers.

Tell me a number which would make the inequality true.

**Solution:**

- a) $4450 \leq a < 4550$
- b) $2675 \leq b < 2685$
- c) $7500 \leq c < 8500$

**39 min**

**Notes**

Individual work, monitored, helped

Written on BB or use enlarged copy master or OHP

Differentiation by time limit

Reasoning, agreement, self-correction, praising

Elicit the rounding ‘rules’: 5 (50, 500) rounds up to next ten (hundred, thousand)

Whole class discussion

Consolidate with another example if necessary.

Individual work, monitored, helped

Reasoning, agreement, self-correction, praising

Extra praise if Ps used new notation correctly

With T’s help

T asks several Ps for possible numbers. Ps suggest a number, then come to number line to show its approximate position. e.g.,

a) $4473 \approx 4500$

$4450 \leq 4473 < 4550 \checkmark$
### Y4

#### Activity

8  

**Rounding**

Which digits can be put instead of the letter to make the statement true? Ps come to BB to explain reasoning and to write the possible digits. Class agrees/disagrees. Let’s check with the smallest and greatest values.

**BB:**

a) It rounds to 5430 as the nearest 10:

\[
\begin{align*}
5 & 4 3  \quad a & 5 4 \quad b & 5 & 5 & 3 & 4 & d & 4 2 & 8 & 5 & 4  & e & 3  \\
a & 0, 1, 2, 3, 4 & b & = 2 & c & = 4 & d & = 5 & e & = 3
\end{align*}
\]

b) It rounds to 7800 as the nearest 100:

\[
\begin{align*}
7 & 8 5  \quad f & 78 & g & 9 & 7 & 5 & 2 & i & 7 & 8 & 9 & 7 & 7 & 0  \\
f & - & g & 0, 1, 2, 3, 4 & h & = 7 & i & = 7 & j & 5, 6, 7, 8, 9
\end{align*}
\]

c) It rounds to 9000 as the nearest 1000:

\[
\begin{align*}
9 & 3 7  \quad k & 8 & 5 & l & 0 & 9 & m & 9 & 9  \\
k & 0, 1, 2, 3, 4 & l & 0, 1, 2, 3, 4 & m & 0, 1, 2, 3, 4  \\
5 & 6, 7, 8, 9 & 5 & 6, 7, 8, 9 & 5 & 6, 7, 8, 9
\end{align*}
\]

\[
\begin{align*}
n & 5 5 5 & p & 4 9 9  \\
& = 8 & p & = 9
\end{align*}
\]

**Notes**

Whole class activity

T has BB or SB or OHT already prepared, or use enlarged copy master or OHP (Ps can have copy on desks if they prefer to try it individually)

At a good pace

Reasoning, agreement, checking, praising

Elicit that \(f\) is impossible!

If problems, show on relevant segment of number line drawn on BB.

Feedback for T

45 min
# Activity

Tables practice, revision, activities, consolidation

*PbY4a, page 35*

## Solutions:

### Q.1

- **a)** \(6475 = 6000 + 400 + 75\)
- **b)** \(27 \text{ H} = 2000 + 700\)
- **c)** \(3297 = 3000 + 200 + 90 + 7\)
- **d)** \(1345 + 655 = 2000\)
- **e)** \(2910 + 1000 = 4910 - 1000\)
- **f)** \(4290 - 500 = 3290 + 500\)

### Q.2

- **a)** \(5586 \text{ km} \approx 5590 \text{ km (to nearest 10 km)}\)
- **b)** \(5586 \text{ km} \approx 5600 \text{ km (to nearest 100 km)}\)
- **c)** \(5586 \text{ km} \approx 6000 \text{ km (to nearest 1000 km)}\)

### Q.3

- **a)** \(3012 \times 2 > 2998 \times 2\)
- **b)** \(2678 + 10 < 2691\)
- **c)** \(4799 + 30 > 4820 - 30\)
- **d)** \(7001 - 5 > 6896 + 10\)
- **e)** \(2323 + 124 > 2423\)
- **f)** \(5650 > 5750 - 101\)

### Q.4

- **a)** \(3560 + 2790 = 6350\)
- **b)** \(3560 - 2790 = 770\)

### Q.5

- **a)** \(3016, \ 3061, \ 3106, \ 3601, \ 3610\)
- **b)** \(2090, \ 2099, \ 2909, \ 2990, \ 2999, \ 3001, \ 3010, \ 3100\)

<tr>
<td>iii)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>11 000 – 3000 = 8000</td>
<td></td>
</tr>
</tbody>
</table>

6 min

2 Vocabulary
T writes an addition and a subtraction on BB. Ps come to BB to write results, explaining reasoning. Class agrees/disagrees.

What names do we give to the different parts of the operations?
Ps come to BB to say and write. Class agrees/disagrees on correct spelling. T helps if necessary.

BB: e.g. sum \[\text{had} \rightarrow \text{was given}\]
\[\text{reductant} \rightarrow \text{difference}\]
\[\text{terms} \rightarrow \text{subtrahend}\]

Elicit that:
- in addition, the terms can be interchanged,
- in subtraction, the reductant and subtrahend cannot be interchanged.

9 min

3 Problems
Listen carefully to the problem. Are there any missing or unnecessary data? T reads problem aloud twice. Ps suggest the data which are missing or not needed. Class agrees/disagrees.

T reads problem again. Ps note the data, make a plan, do the calculation and write the answer as a sentence in their Ex. Bks.

Ps could show numerical part of answer on scrap paper or slates on command. P who responded correctly explains to those who did not. Mistakes discussed and corrected.

Whole class activity on the data. Agreement, praising
Individual work in Ex. Bks, then whole class review and discussion on solution
(Or all done as a whole class activity, with Ps helping each other to solve the problems at the BB and T intervening only when necessary)

Whole class discussion on the data. Agreement, praising

What do you notice?
Ps point out the similarities among the 3 diagrams in each row.

Feedback for T

<tr>
<td>3 (Continued)</td>
<td>Lesson Plan 36</td>
</tr>
<tr>
<td>a) There are 240 children at a holiday camp. How many children will there be altogether if another 130 children and 14 adults arrive?</td>
<td>Deal with one at a time (T could have questions written on SB or OHT) Discussion, reasoning, agreement, self-correcting, praising</td>
</tr>
<tr>
<td>Unnecessary data: Number of adults arriving</td>
<td></td>
</tr>
<tr>
<td>Plan: 240 + 130 = 370</td>
<td></td>
</tr>
<tr>
<td>Answer: There will be 370 children altogether.</td>
<td></td>
</tr>
<tr>
<td>b) The 24 pupils in Class 3 collected 140 kg of chestnuts. The 22 pupils in Class 4 collected 150 kg of chestnuts. How many kg of chestnuts did the two classes collect altogether?</td>
<td></td>
</tr>
<tr>
<td>Unnecessary data: Number of pupils and the class numbers.</td>
<td></td>
</tr>
<tr>
<td>Plan: 140 kg + 150 kg = 290 kg</td>
<td></td>
</tr>
<tr>
<td>Answer: The two classes collected 290 kg of chestnuts.</td>
<td></td>
</tr>
<tr>
<td>c) If Bob was given £240, he would have £600. How much money does Bob have at the moment?</td>
<td></td>
</tr>
<tr>
<td>Unnecessary or missing data: none</td>
<td></td>
</tr>
</tbody>
</table>
| Plan: £600 – £240 = £360 (or $\[
\begin{array}{c}
\text{360} \\
+ 240 = 600
\end{array}
\]$) | |
| Answer: Bob has £360 at the moment. | |
| d) Kate is 170 cm tall and is 24 years old. She is 15 years older than Henry. How old and how tall is Henry? | |
| Missing data: Difference between their heights | |
| Plan: 24 – 15 = 9 (years) | |
| Answer: Henry is 9 years old. We cannot say how tall he is. | |
| e) 120 pupils from a primary school went to the circus on Monday but only 80 pupils from the primary school went to the cinema on Tuesday. How many pupils are in the primary school? | |
| Missing data: Number of pupils from the primary school who did not go to the circus (or to the cinema) | |
| We can only write an inequality for the number of Ps. If the 80 Ps who went to the cinema also went to the circus, there must be at least 120 Ps in the school. If the 80 Ps who went to the cinema did not go to the circus, then the school would have at least 120 + 80 = 200 pupils – but there could be Ps who did not attend either event. | |
| BB: Let P be the least number of Ps possible: 120 ≤ P ≤ 200 | |
| Answer: We cannot say exactly from the data given. | |

7

**PbY3a, page 36, Q.4**

Read: Write operations and calculate the results.

T (P) reads one question at a time. Ps do calculation in Pbs and show result on scrap paper or slates on command. P who answered correctly explains in detail to those who did not. Who agrees? Who did it another way? Mistakes discussed and corrected.

**Solutions:**

a) What is the sum of 4300 and 2800?
   
   BB: \[ 4300 + 2800 = 6300 + 800 = 6300 + 700 + 100 = 7100 \]

b) What is the difference between 4300 and 2800?
   
   BB: \[ 4300 – 2800 = 2300 – 800 = 2300 – 300 – 500 = 1500 \]

c) One term in an addition is 1800. The sum is 5300. What is the other term?
   
   BB: \[ 1800 + \boxed{3500} = 5300 \]
   
   or \[ 5300 – 1800 = 4300 – 800 = 4300 – 300 – 500 = 3500 \]

d) What is the subtrahend if the reductant is 5300 and the difference is 1800?
   
   BB: \[ 5300 – \boxed{3500} = 1800 \]
   
   or \[ 5300 – 1800 = 3500 \] (from c))

e) What is the reductant if the subtrahend is 3800 and the difference is 3300?
   
   BB: \[ \boxed{7100} – 3800 = 3300 \]
   
   or \[ 3300 + 3800 = 6300 + 800 = 6300 + 700 + 100 = 7100 \]

#### Notes

Whole class activity but individual calculation

(or individual work if Ps prefer, under a set time limit and reviewed at BB with whole class)

Responses shown in unison.

Reasoning, agreement, self-correcting, praising

Extra praise if Ps noticed similarity between a) and b), c) and d).

(Revise vocabulary if necessary: reductant is the number being reduced subtrahend is the number being subtracted)
R: Mental calculation
C: Addition and subtraction up to 10 000
E: Over 10 000

### Lesson Plan 37

#### Activity

**Lesson 37**

**Y4**

**Week 8**

**Activity**

**4**

**Addition**

*Daffy Duck* has done her additions like this. Can you suggest an easier way to do them? Ps come to BB or dictate to T. Class agrees/disagrees.

**BB:**

- **a)**
  
  \[
  1700 + 830 + 2300 + 170 = 2530 + 2300 + 170 = (1700 + 2300) + (830 + 170) = 4830 + 170 = 5000 = 5000
  \]

- **b)**
  
  \[
  4200 + 380 + 2800 + 620 = (4200 + 380) + (2800 + 620) = (4200 + 2800) + (380 + 620) = 4580 + 3420 = 8000 \\
  \]

**Notes**

**Lesson Plan 37**

**5**

**PbY4a, page 37**

**Q.1** Read: *Do the calculations. Colour the equal results in the same colour.*

Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

**Solution:**

- **a)** \[4600 + 3900 = 8500\]
- **b)** \[4600 + 4000 – 100 = 8500\]
- **c)** \[3900 + 4000 + 600 = 8500\]
- **d)** \[3900 + 4000 – 600 = 7300\]
- **e)** \[9700 – 1200 = 8500\]
- **f)** \[9700 – 1000 + 200 = 8900\]
- **g)** \[9700 – 2000 + 800 = 8500\]
- **h)** \[10 000 – 1200 – 300 = 8500\]

**Notes**

**Lesson Plan 37**

**6**

**PbY4a, page 37**

**Q.2** Read: *Calculate the sums as simply as you can. Show your calculations in detail.*

Set a time limit. Ps can try out calculations in Ex. Bks or on scrap paper first. Review at BB with whole class.

Ps come to BB to show their calculations. Who did the same? Who thinks another way is easier? Class agrees on easiest one.

**Solution:**

- **a)** \[360 + 4900 + 4100 + 40 = (360 + 40) + (4900 + 4100) = 400 + 9000 = 9400\]
- **b)** \[2840 + 650 + 3050 + 160 = (2840 + 160) + (650 + 3050) = 3000 + 3700 = 6700\]
- **c)** \[410 + 5330 + 2390 + 70 = (410 + 2390) + (5330 + 70) = 2800 + 5400 = 8200\]

**Notes**

**Lesson Plan 37**
7 **PbY4a, page 37**

Q.3 Read: *Do part a) in your exercise book. Use the result to help answer parts b) and c).*

Set a time limit. Review at BB with whole class.
P's come to BB to explain their solutions and point out relationships which make calculation easier (including changing the pence to £s!) Class agrees/disagrees. Mistakes discussed and corrected.

**Solution:**

*Ann had 7500 p. How much more did she have than:*

a) *Peter, if Peter had 2300 p?  7500 – 2300 = 5200*

Ann had 5200 p (= £52) more than Peter.

b) *John, if John had 2200 p?  (7500 – 2200 = 5300)*

John had 100 p less than Peter so Ann would have 5400 p (= £54) more than John.

c) *Diane, if Diane had 1300 p?  (7500 – 1300 = 6200)*

Diane had 1000 p less than Peter so Ann would have 6200 p (= £62) more than Diane.

---

8 **PbY4a, page 3**

Q.4 Read: *Do part a) in your exercise book. Use the result to help answer parts b) and c).*

Set a time limit. Review at BB with whole class.
P's come to BB to explain their solutions. Class agrees/disagrees.

**Solution:**

*Each pupil on a school trip spent 3500 p. How much money did:*

a) *Finlay have left if he took 7000 p?  7000 – 3500 = 3500*

Finlay had 3500 p (= £35) left.

b) *Emma have left if she took 6800 p?  (6800 – 3500 = 3300)*

Emma took 200 p less than Finlay, so would have 200 p less than Finlay left, i.e. 3300p (= £33) left.

c) *Lee have left if he took 7300 p?  (7300 – 3500 = 3800)*

Lee took 300 p more than Finlay, so would have 300 p more than Finlay left, i.e. 3800 p (= £38) left.

---

9 **PbY4a, page 3**

Q.5 Read: *Complete the magic squares. The sum of any row, column or diagonal is the same.*

Set a time limit. Review at BB one at a time.
P's come to BB, explaining reasoning. Class checks all rows, columns and diagonals. Mistakes discussed and corrected.

**Solution:**

<table>
<thead>
<tr>
<th></th>
<th>5000</th>
<th>2000</th>

R: Mental calculation
C: Addition and subtraction up to 10 000. Written calculations.
E: Over 10 000. Problems in context

Activity 1

Sequences
Look at what the arrows mean. Let's fill in the missing terms. Ps come to BB or dictate to T. Class agrees/disagrees.
Let's continue the sequence orally. Ps might notice that top and bottom terms are increasing by the same amount. Why?

BB: a) means + 4000 and means – 3000

1000 2000 3000 4000 5000

5000 6000 7000 8000 9000

e etc.

b) means + 4500 and means – 2500

1200 3200 5200 7200 9200

5700 7700 9700 11 700 13 700

e etc.

Notes
Whole class activity
Drawn on BB or use enlarged copy master or OHP
At a good pace
Agreement, praising
For oral continuation, T chooses Ps at random
Discussion, agreement that:
a)  + 4000 – 3000  =  + 1000
b)  + 4500 – 2500  =  + 2000

Feedback for T

Activity 2

Magic squares
Let's fill in these magic squares. What should we do first? (Work out the magic number.) Ps agree on total, then come to BB to fill in missing numbers, explaining reasoning. Class checks that all rows, columns and diagonals are equal.

BB: a) 7000 2000 6000

4000 5000 6000

4000 8000 3000

b) 2800 4500 4700

5900 4000 2100

3300 3500 5200

Notes
Whole class activity
Drawn on BB or use enlarged copy master or OHP
Ps suggest what to do first and how to continue.
Reasoning, agreement, checking, praising
Feedback for T

Activity 3

Problems
Help me to solve these problems. T reads problem twice and Ps repeat in own words. Ps suggest each step and come to BB to write data, make a plan, estimate the result, do the calculation, check the result and say the answer as a sentence. Class agrees/disagrees and writes each step in Ex. Bks too.

a) The King of Dombleland has £6800 in his bank account and £1900 in a safe at his castle. How much money does he have altogether?

Data: Bank: £6800 Safe: £1900
Plan: £6800 + £1900 Estimate: £7000 + £2000 = £9000

C: 6800 + 1900 = 7800 + 200 + 700 or

= 8000 + 700

= 8700

Answer: He had £8700 altogether.

Notes
Whole class activity
Involves as many Ps as possible
Class (T) points out missed steps
At a good pace
Show the calculations horizontally and vertically.
Check against estimates and with different calculations.

Check:

<p>| | | | |</p>

b) The King had a banquet and on the table were two jugs containing his favourite wine. One jug contained 3 litres 500 ml of white wine and the other contained 2700 ml of red wine. Which wine was there more of and how much more?

**Data:**
- W: 3 litres 500 ml = 3500 ml
- R: 2700 ml

**Plan:**
- 3500 ml – 2700 ml
- **E:**
  - 800

**Answer:** There were 800 ml more of white wine.

If another 1 and a half litres of wine was poured into each jug, which would hold more and how much more?

**BB:**
- 3500 ml + 1500 ml > 2700 ml + 1500 ml

**Answer:** The difference between the jugs would be the same.

c) A straight road leads from the castle to a church, 2860 m away. On the same road and 1720 m from the church is a large rock. How far is the rock from the castle?

What could we do this time to help us? (Draw a diagram.) Ps dictate what T should draw. e.g.

i) BB:

**Plan:**
- 2860 m + 1720 m
- **E:**
  - 4560 + 20
  - 4580

Is this the only possible solution? Listen carefully. T reads problem again. (Elicit that the rock could be before the church.) Let's draw it.

ii) BB:

**Plan:**
- 2860 m – 1720 m
- **E:**
  - 1160 – 20
  - 1140

**Answer:** The rock could be 4580 m (4 km 580 m) from the castle if it was after the church, or 1140 m (1 km 140 m) from the castle if it was between the castle and the church.

20 min

Extra praise if a P thinks of the other possibility without a hint from T

Ps dictate what T should draw (or a P draws the diagram).
**Y4**

### Activity

<table>
<thead>
<tr>
<th>4</th>
<th><strong>PbY4a, page 38</strong></th>
</tr>
</thead>
</table>

#### Q.1

**Read:** Estimate quickly, then calculate the sum.

Do part a) with whole class first as a model for Ps to follow.

Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

**Solution:**

<table>
<thead>
<tr>
<th>a)</th>
<th>b)</th>
<th>c)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2653 + 1746</td>
<td>1256 + 7902</td>
<td>5343 + 2145</td>
</tr>
</tbody>
</table>

---

#### Q.2

**Read:** Complete the additions and then check them.

Ps come to BB to fill in a column, explaining reasoning in detail with place values, (e.g. 6U + 2U = 8U, or 8U – 6U = 2U). Class points out errors. Ps check by doing the completed addition again.

**Solution:**

<table>
<thead>
<tr>
<th>a)</th>
<th>b)</th>
<th>c)</th>
<th>d)</th>
</tr>
</thead>
<tbody>
<tr>
<td>537</td>
<td>459</td>
<td>+ 72</td>
<td>376</td>
</tr>
<tr>
<td>455</td>
<td>555</td>
<td>+ 71</td>
<td>552</td>
</tr>
<tr>
<td>5343</td>
<td>2145</td>
<td>+ 71</td>
<td>2145</td>
</tr>
</tbody>
</table>

---

#### Q.3

**Read:** Estimate first, then calculate the difference.

Deal with one part at a time. Do part b) with whole class if necessary, then Ps can do part c) in Ex. Bks.

Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning in detail (with T’s help). Class agrees/disagrees. Mistakes discussed and corrected.

**Reasoning details:**

<table>
<thead>
<tr>
<th>a)</th>
<th>b)</th>
<th>c)</th>
<th>d)</th>
</tr>
</thead>
<tbody>
<tr>
<td>7U – 2U = 5U</td>
<td>7U + 2U = 14U</td>
<td>6H + 7H = 13H</td>
<td>7H + 1H = 8H</td>
</tr>
</tbody>
</table>

---

**Notes**

- Individual work, monitored, helped
- Written on BB or use enlarged copy master or OHP
- Reasoning with place value details, e.g. for a):
  - 3U + 6U = 9U
  - 5T + 4T = 9T
  - 6H + 7H = 13H = 1Th + 3H
  - 2Th + 1Th + 1Th = 4Th

  Agreement, self-correction, praising

- Feedback for T

---

**Lesson Plan 38**

- Whole class activity
- (or individual work if Ps wish)
- Written on BB or use enlarged copy master or OHP
- Discussion, reasoning, agreement, praising

  Reasoning details, e.g. d):
  - 6U + 7U = 13U = 1T + 3U
  - 3T + 8T + 1T = 12T = 1H + 2T
  - 7H + 1H + 0H = 8H
  - 4Th + 3Th = 7Th

  (or if part b) is done as individual work, part c) can be an extension for quicker Ps)
## Lesson Plan 38

### Extension

**Copy the diagram and make up your own puzzle using other 4-digit numbers for a neighbour to solve.**

\[39\min\]

### Notes

Ps check with an addition and a subtraction and compare with estimate.

Add 'Th, H, T, U' to calculations on BB if necessary.

Extra praise if Ps had all 3 correct!

---

**7**  
*PbY4a, page 38*

**Q.4** Read  
*The sum of any two numbers is the number directly above them. Fill in the missing numbers.*

Set a time limit. Ps can do necessary calculations on scrap paper or in Ex. Bks.

Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees.

**BB:**

- **a)**  
  \[10000\]

**Extension**

Copy the diagram and make up your own puzzle using other 4-digit numbers for a neighbour to solve.

\[45\min\]

---

Individual work, monitored

Drawn on BB or use enlarged copy master or OHP

Differentiation by time limit

At a good pace

Reasoning, agreement, self-correction, praising

Could be finished at home or in *Lesson 40.*
# Lesson Plan

## Activity 1

### Calculations

T has BB already prepared. Ps come to BB to do calculations, explaining reasoning. Class agrees/disagrees.

Ps point out relationships which would make the calculations easier and identify equal operations.

**BB:**

- **a)**
  1. \(3600 + 4700 = 8300\)
  2. \((3600 + 200) + 4700 = 8500\)
  3. \(3600 + (4700 + 300) = 7900\)
  4. \((3600 - 600) + 4700 = 7700\)
  5. \(3600 + (4700 - 1000) = 8300\)
  6. \((3600 + 400) + (4700 - 400) = 8500\)

- **b)**
  1. \(7500 - 3700 = 3800\)
  2. \((7500 + 500) - 3700 = 4300\)
  3. \(7500 - (3700 + 300) = 3500\)
  4. \((7500 - 500) - 3700 = 3300\)
  5. \(7500 - (3700 - 700) = 4500\)
  6. \((7500 - 100) - (3700 + 100) = 3800\)
  7. \((7500 - 200) - (3700 - 200) = 3800\)
  8. \((7500 + 100) - (3700 + 100) = 2800\)

## Activity 2

### Written exercise

Write these numbers one below the other in your Ex. Bks. Make sure that the place values line up! Estimate their sum, then do the calculation. Show me the result when I say.

Ps who responded correctly explain at BB to those who did not. Mistakes discussed and corrected. How could we check it?

(Add in the opposite direction (e.g. \(\downarrow\) then \(\uparrow\)), compare with estimate.)

**BB:**

- **a)**
  1. \(2756 + 623 + 7 + 1248 = 5332\)
  2. \(2756 + 623 + 7 + 1248 = 5332\)
  3. \(2756 + 623 + 7 + 1248 = 5332\)
  4. \(2756 + 623 + 7 + 1248 = 5332\)

- **b)**
  1. \(8 + 4726 + 160 + 3509 = 6723\)
  2. \(8 + 4726 + 160 + 3509 = 6723\)

Ps could dictate another calculation if time.

## Activity 3

### Problem

Listen carefully and solve this problem in your Ex. Bks. Do not miss any steps! Show me the answer when I say.

*The highest mountain on earth is Mount Everest which is 8848 m above sea level. The highest mountain in Africa is Kilimandjaro which is 5895 m above sea level. How much higher is Mount Everest than Mount Kilimandjaro?*  
Show me . . . now! (2953 m)

A, tell us how you worked out the answer. Who agrees? etc. Mistakes discussed and corrected.
<table>
<thead>
<tr>
<th>Activity</th>
<th>Notes</th>

</thead>
</table>
| 3 (Continued) | **Solution:**
| **Data:** ME: 8848 m  MK: 5895 m | Check with addition and compare with estimate. |
| **Plan:** 8848 m – 5895 m | **Answer:** Mount Everest is 2953 m higher than Mount Kilimandjaro. |
| C: | |
| **Answer:** | |
| | |
| | |
| | |
| **Missing thousands** | **Lesson Plan 39**

Which whole thousands make the statements true?
Ps come to BB to fill in the numbers, explaining reasoning. Class agrees/disagrees or points out other thousands which would be possible. Show on relevant segments of number line roughly drawn on BB if there are problems.
BB:
| a) 3758 + | 4000 | = 7758 | b) 7000 + 2568 = 9568 |
| 3758 + | | < 7758 | 2568 < 9568 |
| 3000, 2000, 1000, 0, ( – 1000, . . .) | 6000, 5000, . . . , 1000, 0, ( – 1000, . . .) |
| 3758 + | | > 7758 | 2568 ≤ 9568 |
| 5000, 6000, 7000, 8000, . . . | 7000, 6000, . . . , 1000, 0, ( – 1000, . . .) |
| c) 9534 – | 3000 | = 6534 | d) 10 000 – 3108 = 6892 |
| 9534 – | | < 6534 | 3108 > 6892 |
| 4000, 5000, 6000, . . . | 11 000, 12 000, 13 000, . . . |
| 9534 – | | ≥ 6534 | 3108 ≠ 6892 |
| 3000, 2000, 1000, 0, ( – 1000, . . .) | Any thousand apart from 10 000 |

**4 Missing thousands**

**Lesson Plan 39**

| **Notes** |
| Reasoning, agreement, checking, self-correcting, praising |
| T could have pictures of both mountains and show their positions on relevant map. |
| T might tell some prepared interesting facts about each. |

| **Q.1** | **PbY4a, page 39** |
| **Read:** Do the operations in the correct order. |
| Elicit that operations inside the brackets should be done first. |
| Ps write interim results above operation signs. Calculations done at side of Pbs or in Ex. Bks. |
| Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning. Mistakes discussed and corrected. |
| Ps tell class what they noticed, e.g. |
| • in each part, ii) is the same as i); the brackets are not needed; |
| • in a), iii) is less because 1596 is subtracted instead of added; |
| • in b), iii) is greater because 1976 less is subtracted (or 1976 is added instead of subtracted). |
| → (6020 − 2 × 1596) = 2828 |
| → (1886 + 2 × 1976) = 5838 |

| **Lesson Plan 39** |
| Reasoning, agreement, checking, self-correcting, praising |

| **Notes** |

| T might tell some prepared interesting facts about each. |
### Activity 5

**Solution:**

a) i)  
\[ 8152 - 3728 + 1596 = 6020 \]

ii)  
\[ (8152 - 3728) + 1596 = 6020 \]

iii)  
\[ 8152 - (3728 + 1596) = 2828 \]

b) i)  
\[ 7020 - 3158 - 1976 = 1886 \]

ii)  
\[ (7020 - 3158) - 1976 = 1886 \]

iii)  
\[ 7020 - (3158 - 1976) = 5838 \]

---

#### Q.2 Read: Fill in the missing numbers.

Remember to check that all the equations, horizontally and vertically, are correct! Try to do the calculations mentally!

Set a time limit. Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

**Solution:**

\[
\begin{align*}
\text{a) } & \quad 3600 + 1800 = \boxed{5400} \\
\text{b) } & \quad 12500 - 3500 = \boxed{9000} \\
\text{c) } & \quad 7200 - 1800 = \boxed{5400} \\
\text{d) } & \quad 9000 + 4400 = \boxed{13400} \\
\text{e) } & \quad 5300 - 1700 = \boxed{3600}
\end{align*}
\]

---

### Activity 6

**PbY4a, page 39**

#### Q.2 Read: Fill in the missing numbers.

Remember to check that all the equations, horizontally and vertically, are correct! Try to do the calculations mentally!

Set a time limit. Review at BB with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

**Solution:**

\[
\begin{align*}
\text{a) } & \quad 3600 + 1800 = \boxed{5400} \\
\text{b) } & \quad 12500 - 3500 = \boxed{9000} \\
\text{c) } & \quad 7200 - 1800 = \boxed{5400} \\
\text{d) } & \quad 9000 + 4400 = \boxed{13400} \\
\text{e) } & \quad 5300 - 1700 = \boxed{3600}
\end{align*}
\]

---

### Activity 7

**PbY4a, page 39, Q.3**

Read: Solve the problem.

The castle is 9 km 68 m from the forest. There is a waterfall between the castle and the forest. It is 2 km 456 m nearer to the castle than to the forest.

How far away is the waterfall from the castle?

Allow Ps time to think about a plan and discuss it with their neighbour.

A, what do you think we should do? Who agrees? Who thinks something else? etc. T gives hint if nobody knows.

**Solution:** e.g.

Let the distance from the castle to the waterfall be \( a \), then the distance from the waterfall to the forest will be \( a + 2456 \) m.

**BB:**

\[ \begin{array}{c}
\text{Castle} \\
\text{Waterfall} \\
\text{Forest}
\end{array} \]

\[ a \]

\[ a + 2456 \text{ m} \]

9068 m

The total distance would be: \( a + (a + 2456) \) m = 9068 m

i.e. \( 2 \times a = 9068 \) m – 2456 m

So \( a = (9068 - 2456) \div 2 = 6612 \div 2 = 3306 \) m

**Answer:** The waterfall is 3 km 306 m from the castle.

---

Lesson Plan 39

Y4

Activity

PbY4a, page 39

Q.4 Read: Write a plan, do the calculation and write the answer in your exercise book.

Deal with one part at a time. Ps read the question themselves and solve it in Ex. Bks. Set a time limit for each question. Review with whole class. Ps come to BB to show their solution, explaining reasoning. Who agrees? Who thinks something else? Who did it a different way? Who made a mistake? What kind of mistake? etc.

Solutions:

a) In Appletown, the number of inhabitants is 6548. The number of females is 3308. How many males live there?

6548 – 3308 = 3240

Answer: 3240 males live in Appletown.

b) In Banaville, there are 5476 females, 260 more than the number of males. How many males live there?

Answer: 5416 males live in Bananaville.

c) There are 9500 inhabitants in Dombleland, 2500 more adults than children. How many adults and how many children live there?

BB: e.g. A + C = 9500 C = A – 2500

so A + (A – 2500) = 9500

2A − 2500 = 9500

2A = 9500 + 2500 = 11 000 + 1000 = 12 000

A = 12 000 ÷ 2 = 6000

Then C = 6000 − 2500 = 4000 − 500 = 3500

Answer: There are 6000 adults and 3500 children living in Dombleland.

Notes

Individual work, monitored, helped
(or part c) could be done with the whole class)
Responses could be shown on slates in unison on command.
Reasoning, agreement, checking, self-correction, praising
Show details of vertical addition/subtraction on BB.

Other methods of solution possible, e.g.
C + (C + 2500) = 9500
or C = (9500 – 2500) ÷ 2
Accept any correct method.

Check:

6000 + 3500 = 9500 ✔

6000 – 3500 = 2500 ✔

Ps might notice its similarity to Q.3.
### Activity

Tables practice, revision, activities, consolidation of units of measure  
*PhY4a, page 40*

**Solutions:**

Q.1  
- a) 193314 b) 193314 c) 193314 d) 193314

Q.2  
- a) 5490  
- b) 5500  
- c) 5000

Q.3  
- a) 6020 – (3860 + 1020) = 6020 – 4880 = 1140  
  There were 1140 children at the match.  
- b) 1025 + (1025 + 295) = 1025 + 1320 = 2345  
  The farmer has 2345 ducks and chickens altogether.  
- c) 6345 – (3016 + 2107) = 6345 – 5123 = 1222  
  There are 1222 blue beads in the bag.

Q.4  
- a) 8541  
- b) 1458  
- c) 8514  
- d) 1485  
- e) 51 and 48

Q.5  
- a)  
  
- b)  
- c)
### Lesson Plan

**Week 9**

#### Activity

**Mental practice**

T says an operation and Ps say result. (Give simple questions to the less able Ps and difficult questions to the more able.) e.g.

- **a)** \(4 + 7, 6 \times 8, 42 \div 7, 23 - 9, 150 + 320, 1500 - 600, 5000 \div 2, \text{ etc.} \)
- **b)** \(56 + 77, 77 - 56, 35 \div 5, 350 \div 5, 3500 \div 5, 7 \times 400, \text{ etc.} \)
- **c)** \(151 + 49, 628 - 428, 6000 \div 3, 6000 \div 30, 6000 \div 300, 140 \times 2, 512 \times 2, 200 \times 40, 15 \times 12, 432 + 430, \text{ etc} \)

Write details of difficult calculations on BB if necessary, e.g.

\[56 + 77 = 126 + 7 = 133; \ 15 \times 12 = 150 + 30 = 180.\]

**15 min**

#### Operations

**a)** Study the diagram. Who can think of additions or multiplications about it? Pts come to BB or dictate to T. Class agrees/disagrees.

BB:

- \(\begin{array}{cccccc}
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\end{array}\) e.g. \(7 + 7 + 7 + 7 = 4 \times 7 = 28\)
- \(\begin{array}{cccccc}
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\end{array}\) \(4 + 4 + 4 + 4 + 4 + 4 = 7 \times 4 = 28\)
- \(\begin{array}{cccccc}
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\end{array}\) \(4 \times 7 = 7 \times 4\)

What is the connection between addition and multiplication?

<table>
<thead>
<tr>
<th>When equal numbers are added, the addition can be shortened to a multiplication.</th>
</tr>
</thead>
</table>

Let’s see if you can remember the names of the components in a multiplication. Pts come to BB to point, say and write. Class agrees/disagrees.

BB:

- \(\begin{array}{cccccc}
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\end{array}\) product \(4 \times 7 = 28\)
- \(\begin{array}{cccccc}
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\end{array}\) multiplier or multiplicand \(4 \times 7 = 28\)
- \(\begin{array}{cccccc}
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\odot & \odot & \odot & \odot & \odot & \odot \\
\end{array}\) factors

What else can you tell me about multiplication?

<table>
<thead>
<tr>
<th>In multiplication, the factors are inter-changeable.</th>
</tr>
</thead>
</table>

**b)** Study this diagram. What multiplications could we write about it? Pts come to BB or dictate to T. Class agrees/disagrees.

BB:

- \(\begin{array}{cccc}
5 & 5 & 5 & 5 \\
5 & 5 & 5 & 5 \\
\end{array}\) e.g. \(3 \times (2 \times 5) = 3 \times 10 = 30, \text{ or} \)
- \(\begin{array}{cccc}
5 & 5 & 5 & 5 \\
5 & 5 & 5 & 5 \\
\end{array}\) \(2 \times (3 \times 5) = 2 \times 15 = 30\)

What do you notice about the brackets?

If the operation contains only multiplications, then brackets do not change the product and can be deleted.

**Notes**

Whole class activity

Diagrams drawn on BB (or items stuck to BB)

Agreement, praising

Ask several Ps what they think. T repeats Ps’ reasoning in a clearer way if necessary.

T could have ‘rules’ already prepared on SB or OHT or card. Pts say them in unison.

Discuss the different ways of thinking of a multiplication, referring to the diagram.

(4 rows of 7 or 7 columns of 4)

T gives hint if nobody can think of anything.

<table>
<thead>
<tr>
<th>e.g. 3 columns of 2 $$\odot$$s or 2 rows of 3 $$\odot$$s</th>
</tr>
</thead>
</table>
c) Listen to the story and study the diagram.

Grandma planted 9 rows of flowers, with 12 plants in each row. Her 3 grandchildren were curious about how many plants there were altogether and worked it out in different ways like this.

Who can explain their reasoning? Ps come to BB to work through the operations, referring to the diagram. Class points out errors.

A difficult number can be multiplied by writing it as the sum or difference of simpler numbers, then multiplying each of the simpler numbers and adding or subtracting the products.

division

| 18 min |

3 Division

a) Each box holds 6 eggs. Who can write a division about the diagram? Who agrees? Who can think of a different one? etc.

BB:

```
|   |   |   |   |   |   |   |   |
```

|   |   |   |   |   |   |   |   |

|   |   |   |   |   |   |   |   |

|   |   |   |   |   |   |   |   |

e.g. i) 46 eggs ÷ 7 = 6 eggs and 4 eggs remain, or
ii) 46 eggs ÷ 6 eggs = 7 (boxes) and 4 eggs remain

Talk about the two kinds of division:
i) is sharing equally (1 egg in 1st box, then 1 egg in 2nd box, etc.)
ii) is dividing into equal groups (e.g. 6 in 1st box, then 6 in 2nd box) and could be shown as a subtraction:

BB: 46 – 6 – 6 – 6 – 6 – 6 = 4, (i.e. 6 subtracted 7 times)

How can we check division? (with multiplication) P come to BB to write it. Class agrees/disagrees.

BB: 46 ÷ 7 = 6, r 4 because 46 = 6 × 7 + 4

Let’s see if you can remember the names of the components in a multiplication. Ps come to BB to point, say and write. Class agrees/disagrees.

Can the dividend and divisor be interchanged? (No, the order matters in division.) T confirms with simple example on BB.

© CIMT, University of Exeter
Activity 3

b) Listen carefully and think about how you would solve this problem.

Alice bought 9 kg of potatoes for £7.20. How much did 1 kg cost?

Ps come to BB or dictate to T. Class agrees/disagrees.

e.g. BB: 9 kg → £7.20 = 720 p

1 kg → 720 p ÷ 9 = 80 p

Check: 80 p × 9 = 720 p = £7.20 ✓

Answer: 1 kg of potatoes cost 80 p.

Agree that division is the reverse of multiplication (and subtraction is the reverse of addition).

Lesson Plan 41

Notes

Whole class activity
Reasoning, agreement, checking, praising

We could also show it in a diagram like this:

BB: $egin{array}{c}	imes 9 \\ \downarrow \\ 720 \text{ p} \\
\downarrow \\ \div 9 \\
\end{array}$

Problems

Let's think of different ways in which we could solve these problems.

a) 6 friends spent the day in London together. They each paid an equal share of the bills for their lunch and dinner. Their lunch bill was £42 and their dinner bill was £48.

How much did each person pay altogether?

Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Who can think of a different way to solve it? etc.

BB: e.g.

<table>
<thead>
<tr>
<th>Data:</th>
<th>Lunch</th>
<th>Dinner</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 people</td>
<td>£42</td>
<td>£48</td>
<td>?</td>
</tr>
<tr>
<td>1 person</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

i) Work out the total amount the 6 people paid, then divide by 6.

$(48 + 42) ÷ 6 = 90 ÷ 6 = 60 ÷ 6 + 30 ÷ 6 = 10 + 5 = 15$

ii) Work out what each person paid for lunch and for dinner, then add the two amounts together.

$48 ÷ 6 + 42 ÷ 6 = 8 + 7 = 15$

Answer: Each person paid £15.

b) 8 copies of a book should cost £88 altogether but the shopkeeper reduced the total price by £16.

How much did the shopkeeper actually charge for each book?

Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Who can think of a different way to solve it? etc. e.g.

i) Work out the reduced price of 8 books then divide by 8.

BB: $(88 - 16) ÷ 8 = 72 ÷ 8 = 9$

ii) Work out what each book should really cost, then subtract the reduction on each book.

BB: $88 ÷ 8 - 16 ÷ 8 = 11 - 2 = 9$

Answer: The shopkeeper charged £9 for each book.

Elicit that to divide 'difficult' numbers, write it as the sum (difference) of two simpler numbers, then divide each simpler number by the divisor and add (subtract) the two quotients.
## Lesson Plan 41

### Activity

#### 5

**PbY4a, page 41**

Q.1 Read: Write the products.

Elicit that there are $6 \times 4 = 24$ multiplications. Set a time limit. Review orally with whole class. Ps change pencils and mark/correct own work. Who had all 24 correct? Who had 1 (2, 3, 4 more than 4) mistakes? What was your mistake? etc.

Ps point out relationships they have noticed.

**Solution:**

- a) $3 \times 6 = 18, \ 30 \times 6 = 180, \ 3 \times 60 = 180, \ 30 \times 60 = 1800$
- b) $8 \times 4 = 32, \ 80 \times 4 = 320, \ 800 \times 4 = 3200, \ 80 \times 40 = 3200$
- c) $9 \times 3 = 27, \ 90 \times 3 = 270, \ 9 \times 300 = 2700, \ 90 \times 30 = 2700$
- d) $8 \times 7 = 56, \ 80 \times 7 = 560, \ 8 \times 70 = 560, \ 800 \times 7 = 5600$
- e) $6 \times 7 = 42, \ 60 \times 7 = 420, \ 600 \times 7 = 4200, \ 6 \times 700 = 4200$
- f) $9 \times 9 = 81, \ 90 \times 9 = 810, \ 900 \times 9 = 8100, \ 90 \times 90 = 8100$

- **31 min**

#### 6

**PbY4a, page 41**

Q.2 Read: Fill in the missing numbers.

Elicit that the missing factor can be calculated by dividing the product by the given factor and that there are $6 \times 3 = 18$ multiplications. Set a time limit. Review orally with whole class. Ps change pencils and mark/correct own work. Who had all 18 correct? Who had 1 (2, 3, more than 3) mistakes? What was your mistake? etc. Ps point out relationships they have noticed.

**Solution:**

- a) $8 \times 3 = 24, \ 8 \times 60 = 240, \ 8 \times 300 = 2400$
- b) $5 \times 9 = 45, \ 5 \times 90 = 450, \ 5 \times 900 = 4500$
- c) $6 \times 5 = 30, \ 6 \times 50 = 300, \ 6 \times 500 = 3000$
- d) $9 \times 4 = 36, \ 9 \times 40 = 360, \ 90 \times 40 = 3600$
- e) $4 \times 7 = 28, \ 4 \times 70 = 280, \ 40 \times 70 = 2800$
- f) $6 \times 9 = 54, \ 60 \times 9 = 540, \ 60 \times 90 = 5400$

- **35 min**

### Notes

Individual work, monitored (helped)

Differentiation by time limit

Agreement, self-correcting, evaluation, praising

Write details of problem calculations on BB.

Discuss connections, e.g. if the dividend (divisor) increases by 10 (100) times, the quotient also increases by 10 (100) times.

Praise all contributions

Feedback for T
### Lesson Plan 41

**Review at beginning of Lesson 42.**  
(or extension for quicker Ps who finish early)

---

© CIMT, University of Exeter
### Activity

#### Mental practice

T says an operation. Ps say result.

- **a)** Addition and subtraction: e.g. 67 + 7, 158 + 5, 67 + 24, 418 + 34, 5249 + 16, 4300 + 1800, etc.
- **b)** Multiplication and division tables: e.g. 4 × 5, 9 × 9, 5 × 0, 25 ÷ 5, 27 ÷ 3, 49 ÷ 7, 2 ÷ 1, 0 ÷ 10, etc. Ps can give them too!
- **c)** Multiplication and division: e.g. 17 × 2, 43 × 3, 154 × 2, 2320 × 3, 2500 × 4, 5000 × 2, etc.

Write difficult operations on BB. e.g.

BB: 40 × 99 = 40 × 100 − 40 = 3960

8 min

#### Revision

- **a)** Vocabulary
  
  T (or P) writes a multiplication and a division on the BB.
  
  Ps come out to BB to write result, explaining reasoning, and to point to and name each component. Class agrees/disagrees. e.g.
  
  BB: 30 × 40 = (1200) ÷ 50 = (15)

  × : multiplicand and multiplier (or factors), product
  ÷ : dividend, divisor, quotient

- **b)** Properties
  
  Let's complete these open sentences. Ps come to BB or dictate to T. Class agrees/disagrees. e.g.
  
  i) The **terms** of an addition are inter-changeable.
  
  ii) The **reductant** and **subtrahend** of a **subtraction** are **not** inter-changeable.
  
  iii) The **factors** of a **multiplication** are inter-changeable.
  
  iv) The **dividend** and **divisor** of a **division** are **not** inter-changeable.

13 min

#### Multiplication

Who can help me with these multiplications? Ps come to BB to write the products, explaining reasoning. Class points out errors. What do you notice? (The sum of the first 4 products equals the 5th product; the bottom multiplicand is the sum of the first 4 multiplicants.)

BB:

- **a)** 3 × 4 = (12)
- **b)** 5 × 3 = (15)
- **c)** 5 × 7 = (35)
- 20 × 4 = (80)
- 5 × 80 = (400)
- 80 × 7 = (560)
- 400 × 4 = (1600)
- 5 × 400 = (2000)
- 700 × 7 = (4900)
- 2000 × 4 = (8000)
- 5 × 1000 = (5000)
- 785 × 7 = (5495)
- 2423 × 4 = (9692)
- 5 × 1483 = (7415)

Elicit that the bottom multiplicand has been written as the sum of simpler numbers to make the multiplication easier.
Lesson Plan 42

**Activity 3**
(Continued)

How could we calculate the last multiplication in each column in another way? Ps comes to BB to write it. Who agrees? Who can think of another way? etc.

BB: e.g.

<table>
<thead>
<tr>
<th>a)</th>
<th>b)</th>
<th>c)</th>
</tr>
</thead>
<tbody>
<tr>
<td>[124 \times 213]</td>
<td>[148 \times 13]</td>
<td>[78 \times 5]</td>
</tr>
<tr>
<td>[24 \times 213]</td>
<td>[96 \times 8]</td>
<td>[78 \times 5]</td>
</tr>
<tr>
<td>[24 \times 213]</td>
<td>[96 \times 8]</td>
<td>[78 \times 5]</td>
</tr>
<tr>
<td>[96 \times 8]</td>
<td>[78 \times 5]</td>
<td>[78 \times 5]</td>
</tr>
<tr>
<td>[78 \times 5]</td>
<td>[53]</td>
<td>[53]</td>
</tr>
</tbody>
</table>

20 min

**Activity 4**

Division

Who can help me with these divisions? Ps come to BB to write the quotients, explaining reasoning. Class points out errors.

What do you notice? Ps come to BB to point and reason (with T's help in b) to explain that the remainder in each row has been added to the next row, e.g. 90 + 100 = 190).

BB:

<table>
<thead>
<tr>
<th>a)</th>
<th>b)</th>
<th>c)</th>
</tr>
</thead>
<tbody>
<tr>
<td>[600 \div 3 = (200)]</td>
<td>[4300 \div 6 = (700, r 100)]</td>
<td>[78 \div 5 = (15)]</td>
</tr>
<tr>
<td>[90 \div 3 = (30)]</td>
<td>[190 \div 6 = (30, r 10)]</td>
<td>[17 \div 6 = (2, r 5)]</td>
</tr>
<tr>
<td>[697 \div 3 = (232, r 1)]</td>
<td>[4397 \div 6 = (732, r 5)]</td>
<td></td>
</tr>
</tbody>
</table>

How could we calculate the bottom division in each column in another way? Ps comes to BB to write it. Who agrees? Who can think of another way? etc.

BB: e.g.

<table>
<thead>
<tr>
<th>a)</th>
<th>b)</th>
</tr>
</thead>
<tbody>
<tr>
<td>[123 \div 2]</td>
<td>[123 \div 2]</td>
</tr>
<tr>
<td>[3 \times 697]</td>
<td>[3 \times 123]</td>
</tr>
<tr>
<td>[6 \times 697]</td>
<td>[6 \times 123]</td>
</tr>
<tr>
<td>[123 \div 2]</td>
<td>[123 \div 2]</td>
</tr>
<tr>
<td>[6 \times 697]</td>
<td>[6 \times 123]</td>
</tr>
<tr>
<td>[123 \div 2]</td>
<td>[123 \div 2]</td>
</tr>
<tr>
<td>[6 \times 697]</td>
<td>[6 \times 123]</td>
</tr>
<tr>
<td>[123 \div 2]</td>
<td>[123 \div 2]</td>
</tr>
<tr>
<td>[6 \times 697]</td>
<td>[6 \times 123]</td>
</tr>
<tr>
<td>[123 \div 2]</td>
<td>[123 \div 2]</td>
</tr>
</tbody>
</table>

or a) \[697 \div 3 = (690 + 7) \div 3 = 230 + 2, r 1 = 232, r 1\]

<table>
<thead>
<tr>
<th>b)</th>
<th>c)</th>
</tr>
</thead>
<tbody>
<tr>
<td>[4397 \div 6 = (4200 + 180 + 17) \div 6 = 700 + 30 + 2, r 5]</td>
<td>[78 \div 5 = (15)]</td>
</tr>
<tr>
<td>[78 \div 5 = (15)]</td>
<td>[78 \div 5 = (15)]</td>
</tr>
<tr>
<td>[78 \div 5 = (15)]</td>
<td>[78 \div 5 = (15)]</td>
</tr>
<tr>
<td>[78 \div 5 = (15)]</td>
<td>[78 \div 5 = (15)]</td>
</tr>
<tr>
<td>[78 \div 5 = (15)]</td>
<td>[78 \div 5 = (15)]</td>
</tr>
</tbody>
</table>

Reasoning (with detail of place value), agreement, praising

Feedback for T

© CIMT, University of Exeter
PbY4a, page 42

Q.1 Read: Fill in the missing numbers.

Deal with one part at a time [or do part a) first with the whole class, then part b) as individual work]. Ps could estimate the results first by rounding to nearest 1000. Encourage Ps to think about what they are doing and to try to understand the steps. Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning in detail with place values. Mistakes discussed and corrected.

Ps read completed steps while T points to the relevant parts of the calculation.

Solution:

\[
\begin{array}{c}
a) \quad E: \quad 3 \times 1U = \underline{3} U \\
\quad \quad 3 \times ST = \underline{15} T = \underline{1} H + \underline{5} T \\
\quad \quad 3 \times 2H = \underline{6} H \\
\quad \quad 3000 \times 3 = 9000 \\
\quad \quad 3 \times 3H = \underline{9} Th
\end{array}
\]

\[
\begin{array}{c}
b) \quad E: \quad 4 \times 6U = \underline{24} U = \underline{2} T + \underline{4} U \\
\quad \quad 4 \times ST = \underline{22} T = \underline{2} H + \underline{2} T \\
\quad \quad 4 \times 2H = \underline{8} H \\
\quad \quad 2000 \times 4 = 8000 \\
\quad \quad 4 \times 3H = \underline{12} Th
\end{array}
\]

Q.2 Read: Estimate first, then calculate with addition and with multiplication.

Ps can estimate by rounding to nearest 1000 or nearest 100. Agree that rounding to nearest 100 will be closer to real value. Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning with place value detail. Mistakes discussed and corrected.

Which do you think is easier, addition or multiplication? (Ps most likely will agree that multiplication is easier if lots of the same number have to be added.) Encourage Ps to use the short form of multiplication but only if they understand what they are doing.

Solution:

\[
\begin{array}{c}
a) \quad E: \quad 2600 \times 4 = 10400 \\
\quad \quad 3000 \times 4 = 12000 \\
\quad \quad 2647 \\
\quad \quad 2647 \\
\quad \quad 2647 \\
\quad \quad + 2647 \\
\quad \quad \underline{10588} \\
\quad \quad \underline{212} \\
\quad \quad + 1678 \\
\quad \quad 10068 \\
\quad \quad \underline{444} \\
\end{array}
\]

\[
\begin{array}{c}
b) \quad E: \quad 1700 \times 6 = 10200 \\
\quad \quad 2000 \times 6 = 12000 \\
\quad \quad 1678 \\
\quad \quad 1678 \\
\quad \quad 1678 \\
\quad \quad + 1678 \\
\quad \quad 10068 \\
\quad \quad \underline{444} \\
\quad \quad + 1678 \\
\quad \quad 10068 \\
\quad \quad \underline{444}
\end{array}
\]

(Quicker, easier if Ps know the \times tables by heart, less writing if short form is used)
Lesson Plan 42

Y4

Activity

7  PbY4a, page 42

Q.3  Read: Which is more? How many more? Write in the missing signs and differences.

Deal with one part at a time. How can we do it? (Work out the product for each side, then subtract the smaller from the greater product.) Ps can do the calculations in their Ex. Bks.

Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning. Mistakes discussed and corrected.

Solution:

a) 6 times 1480 = 3 times 2960 
   \[ \begin{array}{c}
   6 \times 1480 \\
   = 8880 \\
   \end{array} \]
   \[ \begin{array}{c}
   3 \times 2960 \\
   = 8880 \\
   \end{array} \]

Extra praise if Ps notice that 2960 is twice 1480 without doing calculations.

b) 9 times 875 > 5 times 1420 
   \[ \begin{array}{c}
   9 \times 875 \\
   = 775 \\
   \end{array} \]
   \[ \begin{array}{c}
   5 \times 1420 \\
   = 7100 \\
   \end{array} \]

c) 4 times 3100 < 7 times 1800 
   \[ \begin{array}{c}
   4 \times 3100 \\
   = 12400 \\
   \end{array} \]
   \[ \begin{array}{c}
   7 \times 1800 \\
   = 12600 \\
   \end{array} \]

d) 8 times 734 > 2 times 2931 
   \[ \begin{array}{c}
   8 \times 734 \\
   = 5872 \\
   \end{array} \]
   \[ \begin{array}{c}
   2 \times 2931 \\
   = 5862 \\
   \end{array} \]

8  PbY4a, page 42, Q.4

Read: Write these digits in the boxes so that the product is less than 10 000 and it is:

a) odd  b) even  c) a 4-digit number.

Deal with one part at a time. Let Ps think about it and try it themselves for a minute, or discuss with their neighbour.

Then Ps come to BB to write a solution and explain their reasoning, with help of class. T gives hints if Ps have no idea what to do. (e.g in a) units digit and multiplier must both be odd, i.e. 3 or 5, but the multiplier cannot be 5, or the product would be > 10 000; choose the thousands digit by estimation)

Solution:

\[ \begin{array}{c}
2 \\
3 \\
4 \\
5 \\
6 \\
\end{array} \]

a) odd 
   \[ \begin{array}{c}
2 \times 4 \times 5 \\
= 7 \times 9 \times 5 \\
\end{array} \]
   \[ \begin{array}{c}
2 \times 4 \times 5 \\
= 7 \times 3 \times 5 \\
\end{array} \]

or any of the numbers in parts a) and b), etc.

b) even 
   \[ \begin{array}{c}
2 \times 4 \times 6 \\
= 7 \times 3 \times 6 \\
\end{array} \]
   \[ \begin{array}{c}
2 \times 4 \times 6 \\
= 7 \times 9 \times 6 \\
\end{array} \]

whole class activity

Whole class activity

(Extra praise if Ps notice that 2960 is twice 1480 without doing calculations.)

Written on BB or SB or OHT

Discussion reasoning, agreement, self-correction, praising

Calculations written on BB if problems, e.g.

\[ \begin{array}{c}
8 \times 7 \times 5 \\
= 1 \times 4 \times 2 \times 0 \\
\end{array} \]
   \[ \begin{array}{c}
7 \times 8 \times 7 \times 5 \\
= 7 \times 1 \times 0 \times 0 \\
\end{array} \]

Feedback for T

(Extra praise if Ps notice that 2960 is twice 1480 without doing calculations.)

If no time to complete during the lesson, the remaining parts could be done for homework.
# Lesson Plan

## Activity

### Mental practice

T says an operation. Ps say result.

a) Addition and subtraction (Or relay: Ps answer, then give operation)

b) Multiplication and division tables (Or relay as above)

c) Multiplication: e.g. \(4 \times 6, 4 \times 16, 4 \times 36, 16 \times 9, \text{etc.}\)

d) Division: e.g. \(12 \div 6, 120 \div 6, 120 \div 60, 1200 \div 60, 1200 \div 600, \text{etc.}\)

### Secret numbers

I am thinking of a secret number. I will give you a clue and you must work out what it is. Show me the number when I say. (Ps can do calculations on scrap paper or in Ex. Bks.)

Ps who responded correctly explain to those who did not.

a) If I multiply it by 3, the result is 2700. Show me . . . now! (900)

(b) If I multiply it by 40, the result is 3200. Show me . . . now! (80)

(c) If I divide it by 7, the result is 80. Show me . . . now! (560)

(d) If I divide it by 60, the result is 50. Show me . . . now! (3000)

### Time

I will ask a question about time. If you cannot do it mentally, write the calculations in your Ex. Bks. Show me the answer when I say.

Ps who answer correctly explain reasoning to class.

a) How many hours are in a day? Show me . . . now! (24)

(b) How many hours are in a week? Show me . . . now! (168)

(c) How many hours are in 10 weeks? Show me . . . now! (1680)

(d) How many minutes are in an hour? Show me . . . now! (60)

(e) How many minutes are in a day? Show me . . . now! (1440)

(f) How many minutes are in a week? Show me . . . now! (10 080)

### Notes

Whole class activity

a) and b) at speed in order round class. If a P answers incorrectly, next P corrects it.

In c) and d) T chooses Ps at random. (Differentiation)

Praising, encouragement only

Whole class activity

Responses given on scrap paper or slates in unison.

Reasoning, agreement, praising

If time, Ps can think of secret numbers and clues too.

Whole class activity

(or individual work in Ex. Bks, reviewed with whole class)

Give Ps enough time to do the calculations.

Responses shown on scrap paper or slates in unison.

Reasoning, agreement, praising

f) BB: \[
\begin{array}{c}
1440 \\
\times 7 \\
\hline
10080 \\
\end{array}
\]
Problems
Listen carefully and think about how you would solve these problems.
T reads problem slowly twice and Ps note data in Ex. Bks. Ps come to BB to show each step of the solution while Ps work in Ex. Bks.

a) 7 metres of iron pipe weighs 3150 g. What would 1 metre weigh?
BB: e.g.
Plan: 7 m → 3150 g
E: 3150 g ÷ 7 < w < 3500 g ÷ 7
1 m → 3150 g ÷ 7 400 g < w < 500 g
C: 3150 ÷ 7 = 400 + 50
= 450 (g)
Check:
= 400 + 50 + 5
= 455 (g)
Answer: 1 metre of iron pipe would weigh 450 g.

b) In a flower shop, the assistant is tying flowers in bunches of 8.
How many bunches can she make if she has 455 flowers?
BB: e.g.
Plan: 8 flowers: → 1 bunch
455 flowers → 455 ÷ 8 (bunches)
C: 455 ÷ 8 = 400 ÷ 8 + 55 ÷ 8
= 50 + 6, r 7
= 56, r 7
Answer: She can make 56 bunches and will have 7 flowers left over.

Workshop 1
Lesson Plan 43

Lesson Plan 43

Notes
Whole class activity
Ps decide what steps should be done, then come to BB to show them. Class points out missed steps or errors.
Reasoning, agreement, checking, praising
Accept any correct form of estimation, calculation and check.
Ps say answers in unison.

Q.1 Read: Fill in the missing numbers.
Elicit that there are 3 × 3 × 2 = 18 operations. Encourage Ps to calculate mentally. Set a time limit.
Review at BB with whole class. Ps dictate results to T, explaining reasoning. Ps change pencils and mark/correct own work.
Who had all 18 correct? Who made 1 (2, 3, more than 3) mistakes? What was your mistake? etc.
What did you notice? Ps point out relationships.
Solution:
a) 8 × 6 = 48
4 × 12 = 48
16 × 3 = 48
b) 36 ÷ 9 = 4
360 ÷ 900 = 4
360 ÷ 9 = 40
600 ÷ 900 = 4

Individual work, monitored, (helped)
Written on BB or use enlarged copy master or OHP
Discussion, reasoning, agreement, self-correction, evaluation, praising
Extra praise if Ps notice connections by themselves.
e.g., If the dividend increases by a certain number of times, the quotient also increases by that number of times;
If the divisor increases by a certain number of times, the quotient decreases by that number of times.
**Activity**

6  

**PbY3a, page 43, Q.2**

Read: *Divide 7640 into 3 equal parts. Fill in the missing items.*

Who can come and point to the division? Read it for us (‘seven thousand six hundred and forty divided by 3’). What should we do first? (Estimate the quotient) Where is it on the BB? P come to point. Why is it written like that? (Because 6000 and 9000 are the next smaller and greater thousands easily divisible by 3) Who can fill in the missing numbers? Who agrees? Let’s read the inequality together. T points to each component. ‘The quotient is more than 2000 and less than 3000.’

Now let’s do the calculation. Ps come to BB to do each step, then fill in and say the relevant ‘details’. Class agrees/disagrees. Ps complete steps in *Pbs* too. Continue until calculation is completed.

What should we do now? (Compare with the estimate.) Agree that 2546 is more than 2000 but less than 3000. How could we check it more accurately? (With a multiplication) Ps come to BB to show it.

Let’s read all the steps again. T points to relevant parts of calculation.

**Solution:**

\[
\begin{array}{c|c|c|c|c}
\text{Th} & \text{H} & \text{T} & \text{U} \\
\hline
5 & 2 & 3 & 6 \\
3 & 7 & 6 & 4 \\
2 & 0 & 1 & 8 \\

\]

7  

**PbY4a, page 37**

Q.3  

Read: *Do the divisions and check them with multiplication.*

Deal with one part at time. Set a time limit.

Review at BB with whole class. Ps dictate to T or come to BB, explaining reasoning in detail. Class agrees/disagrees. Mistakes discussed and corrected.

**Solution:**

\[
\begin{array}{c|c|c|c|c|c}
\text{Th} & \text{H} & \text{T} & \text{U} & \text{.details} \\
\hline
7 & 6 & 3 & 8 & \checkmark \\
5 & 4 & 0 & & \\
\hline
2 & 5 & 6 & & & \checkmark
\end{array}
\]

*BB: Check:*

\[
\begin{align*}
2 & \times 5 & = 10 & \div 3 & = 3 \text{R} 1 \\
7 & 6 & 3 & 8 & \checkmark \\
+ & 2 & & & \\
7 & 6 & 4 & 0 & \checkmark
\end{align*}
\]

Individual work, monitored, helped

Written on BB or use enlarged copy master or OHP

Reasoning with place value detail, agreement, checking, self-correction, praising

Review the name of the components of division: (dividend, divisor, quotient, remainder)

**Extension**

Who can show us one of the divisions in a different way?

(Horizontal or short division or subtraction of known multiples)

T gives hints/help if necessary.

Which do you like best? Why?
**Lesson Plan**

**44**

### Notes

- Whole class activity
- Initial operations written on BB or SB or OHT
- At a good pace
- Reasoning, agreement, praising
- Extra praise for ‘clever’ ways.
- T shows them if Ps do not.

In c) Ps decide which is easier. (Show of hands)

### Activity

1. **Multiplication**

   Let's calculate these products. Ps come to BB to do calculations or dictate to T. Who agrees? Who can think of a better way?

   Elicit that if an operation contains only multiplications, the order does not matter. You can do the calculations in the easiest order and obtain the same result.

   **BB:**
   
   a) $7 \times 4 \times 5 = 28 \times 5 = 100 + 40 = 140$
   
   Or better: $7 \times (4 \times 5) = 7 \times 20 = 140$
   
   b) $9 \times 5 \times 8 = 45 \times 8 = 320 + 40 = 360$
   
   Or better: $45 \times 8 = 90 \times 4 = 360$
   
   Or even better: $9 \times (5 \times 8) = 9 \times 40 = 360$
   
   c) $2 \times 6 \times 10 = 12 \times 10 = 120$
   
   Or: $2 \times (6 \times 10) = 2 \times 60 = 120$
   
   d) $3 \times 5 \times 8 = 15 \times 8 = 80 + 40 = 120$
   
   Or: $15 \times 8 = 30 \times 4 = 120$
   
   Or even better: $3 \times (5 \times 8) = 3 \times 40 = 120$
   
   e) $7 \times 5 \times 12 = 35 \times 12 = 350 + 70 = 420$
   
   Or better: $35 \times 12 = 70 \times 6 = 420$
   
   Or even better: $7 \times (5 \times 12) = 7 \times 60 = 420$
   
   f) $8 \times 4 \times 15 = 32 \times 15 = 320 + 150 + 10 = 470 + 10 = 480$
   
   Or better: $8 \times (4 \times 15) = 8 \times (2 \times 30) = 8 \times 60 = 480$
   
   g) $9 \times 5 \times 20 = 45 \times 20 = 800 + 100 = 900$
   
   Or: $45 \times 20 = 90 \times 10 = 900$
   
   Or even better: $9 \times (5 \times 20) = 9 \times 100 = 900$

   **5 min**

2. **PbY4a, page 44**

   Q1 Read: *How many unit cubes have been used to build the cuboids? Calculate the volume in 3 different ways.*

   Deal with one part at a time. Ps first count the unit cubes along each edge and write the number beside it. Then they write the multiplication with the factors in 3 different orders.

   Review at BB with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

   **Solution:** e.g.

   a) [Diagram of cuboid]

   $V = \frac{8 \times 4 \times 2}{2 \times 4 \times 2} = \frac{32 \times 2}{64} = 64$

   b) [Diagram of cuboid]

   $V = \frac{6 \times 7 \times 4}{3 \times 7 \times 4} = \frac{42 \times 4}{168} = 168$

   **12 min**

### Extension

What is the area of each face? T points to a face and class shouts out its area in unit squares.

© CIMT, University of Exeter
## Lesson Plan 44

### Notes

**Week 9**

**Missing numbers**

Let's fill in the missing numbers. You can do the calculations in your *Ex. Bks* first if you wish. Ps come to BB to write numbers, explaining reasoning. Class agrees/disagrees. Extra praise if Ps notice a 'clever' way.

**BB:**

- **a)** $1678 \times 4 = 1678 \times 3 + 1678$  
  But no calculation is necessary, as $4 \times n = 3 \times n + n$

- **b)** $1905 \times 6 = 1905 \times 8 - 3810$  
  But only one calculation is necessary: $1905 \times 2 = 3810$  
  as $6 \times n = 8 \times n - 2 \times n$

**18 min**

**Inequalities**

Which numbers could be written instead of the square to make the inequality true? What should we do first? (Work out the value of each side.) Ps work out values in *Ex. Bks* then come to BB to write results as another inequality. Class agrees/disagrees.

What numbers would make it true? Class dictates and T writes on BB.

**BB:**

- **a)** $3476 \times 5 < 4346 \times 4$  
  $17380 < 17384$

- **b)** $1075 \times 7 > 7525 \geq 1503 \times 5$  
  $7524, 7523, \ldots, 7516, 7515$ (10 numbers)

**23 min**

**Equal values**

What do you notice about these operations? (They contain the same numbers and the same two operations.) Which of them do you think are the same? T marks the equations that Ps think have equal results.

Let's do the calculations and see whether you are correct. Ps do calculations in *Ex. Bks* first before coming to BB or dictating to T. Class agrees/disagrees. Mistakes in *Ex. Bks* corrected.

Did you choose the correct equal values? Why did you choose them?

**BB:**

- $7200 \div 9 - 3 = 800 - 3 = 797$  
- $7200 \div (9 - 3) = 7200 \div 6 = 1200$  
- $7200 \div 3 - 9 = 2400 - 9 = 2391$  
- $(7200 - 9) \div 3 = 7191 \div 3 = 2397$  
- $7200 - 9 + 3 = 7200 - 3 = 7197$  
- $7200 \div 3 - 9 \div 3 = 2400 - 3 = 2397$

**28 min**

Whole class activity

Written on BB or SB or OHT

Reasoning, agreement, praising

Necessary calculations done at side of BB.

If no P notices easy methods, T gives hints.

Class applauds P who notices this!

Whole class activity

Written on BB or SB or OHT

Ps suggest how to solve them, with help of class

Reasoning, agreement, checking, praising

Check with smallest and greatest values from list.

Feedback for T

Whole class activity

Initial discussion and deciding

Reasoning, agreement, self-correcting, praising

Extra praise if correct.

Ps explain reason for choice (with T's help if necessary).

**C:**

$7200 \div 9 - 3 = 7200 \div (9 - 3) = 7200 \div 3 - 9 = (7200 - 9) \div 3 = 7200 - 9 + 3 = 7200 \div 3 - 9 \div 3$
Lesson Plan 44

Y4

Activity

6 PbYa, page 44

Q.2 Read: *Fill in the missing numbers.*

Let's see how quickly you can solve these! Stand up when you have finished.

P who finished first explains reasoning to class. Class agrees/disagrees. Who did the same? Who did it a different way?

**Solution:**

a) \(1256 \times 6 = 1256 \times 5 + \boxed{1256}\)

(No calculation is necessary, as \(6 \times n = 5 \times n + n\))

b) \(2432 \times 3 = 2433 \times 3 - \boxed{3}\)

(No calculation is necessary as \(2432 \times n = 2433 \times n - n\))

Check for Ps who did the calculations:

a)

\[
\begin{array}{ccc}
1 & 2 & 5 \\
\times & 6 \\
\hline
1 & 2 & 5 \\
1 & 2 & 5 \\
7 & 5 & 3 \\
\hline
1 & 2 & 5 \\
6 & 2 & 8 \\
6 & 2 & 8 \\
1 & 2 & 5 \\
\end{array}
\]

b)

\[
\begin{array}{ccc}
2 & 4 & 3 \\
\times & 3 \\
\hline
2 & 4 & 3 \\
2 & 4 & 3 \\
7 & 2 & 9 \\
\hline
7 & 2 & 9 \\
7 & 2 & 9 \\
7 & 2 & 9 \\
1 & 2 & 5 \\
\end{array}
\]

\[
7299 - 7296 = 3\]

32 min

7 PbY4a, page 44

Q.3 a) Read: *How many squares can you count in this diagram?*

Show me the answer... now! (5) P who answered correctly comes to BB to point and count. Mistakes corrected.

b) Read: *How many squares could you count in:*

i) 675 of these diagrams (3375 squares)

ii) 1060 of these diagrams? (5300 squares)

Ps can do calculations in Ex. Bks or on scrap paper. Results could be shown on scrap paper or slates on command.

Ps who responded incorrectly come to BB to do calculations with help of class. Mistakes discussed/corrected.

BB: i) \[
\begin{array}{ccc}
6 & 7 & 5 \\
\times & 5 \\
\hline
3 & 3 & 7 \\
\end{array}
\]

ii) \[
\begin{array}{ccc}
1 & 0 & 6 \\
\times & 3 \\
\hline
5 & 3 & 0 \\
\end{array}
\]

Extension

If the question had asked for the number of *rectangles*, what would the answers be? Ps come to BB or dictate to T.

a) 9 rectangles (including the 5 squares)

b) i) \[
\begin{array}{ccc}
6 & 7 & 5 \\
\times & 9 \\
\hline
6 & 0 & 7 \\
\end{array}
\]

ii) \[
\begin{array}{ccc}
1 & 0 & 6 \\
\times & 5 \\
\hline
9 & 5 & 4 \\
\end{array}
\]

37 min

Notes

Individual work, monitored

T notes which Ps finish quickly.

If P reasoned correctly, class gives 3 cheers!

If several Ps did the calculations, let Ps go through them on the BB in case mistakes were made.

Reasoning, agreement, self-correction, praising

Individual work, monitored

Diagram drawn on BB:

Agreement, self-correction, praising

Give Ps enough time to do calculations.

In unison

Reasoning, agreement, self-correcting, praising

Whole class activity

Reasoning, agreement, praising
Activity

8   PbY4a, page 44

Q.4 Read: Solve the problems in your exercise book.

Ps read problems themselves, write a plan, do the calculations, check them and write the answer as a sentence. T warns them to picture the story in their head before writing the answer.

Review at BB with whole class. Ps come to BB to write solutions and explain reasoning. Mistakes discussed and corrected.

Solution:

a) 964 soldiers are on parade. They are marching in rows of 6.
   i) How many rows are there?
      BB: 964 ÷ 6 = (600 + 300 + 60 + 4) ÷ 6
           = 100 + 50 + 10 + 0, r 4
           = 160, r 4
      Answer: There are 161 rows. (160 rows of 6 and 1 row of 4)
   ii) Does the last row contain fewer soldiers than the other rows?
      Answer: One of the 161 rows contains 2 fewer soldiers but it might not be the last row.

b) What would your answers be if the soldiers were marching in rows of 8?
   BB: 964 ÷ 8 = (800 + 160 + 4) ÷ 8
       = 100 + 20 + 0, r 4
       = 120, r 4
   Answer: There would be 121 rows. (120 rows of 8 and 1 row of 4)

Discussion, agreement

Extra praise if Ps notice this without hints from T.

9   PbY4a, page 44. Q.5

Read: Fill in the missing numbers.

Ps come to BB or dictate to T, explaining reasoning. Calculations done in Ex. Bks or at side of BB. Class points out errors.

Solution:

a) 9360 ÷ 2 = 4680 ÷ 3 = 1560 ÷ 4 = 390 ÷ 5 = 78 ÷ 6 = 13
b) 9360 ÷ 4 = 2340 ÷ 5 = 468 ÷ 2 = 234 ÷ 6 = 39 ÷ 3 = 13
   9360 ÷ 3 = 3120 ÷ 6 = 520 ÷ 5 = 104 ÷ 4 = 26 ÷ 2 = 13

What do you notice? (dividends and quotients are the same; divisors are the same but in different orders) Elicit that if an operation contains only divisions, then the order does not matter.

Discussion, agreement

Extra praise if Ps notice this without hints from T.
### Activity
Tables practice, revision, activities, consolidation
*PbY4a, page 45*

#### Solutions:

**Q.1**

a) 16

b) i) $16 \times 100 = 1600$

ii) $16 \times 1000 = 16000$

**Q.2**

a) $\frac{4200}{4} \div 1050 \div 210 \div 35 \times 8 \times 280 \times 5 = 1400$

b) $\frac{4200}{10} \div 420 \div 140 \div 35 \times 5 \times 175 \times 6 = 1050$

c) $\frac{4200}{7} \div 600 \div 60 \div 12 \times 25 \times 300 \times 2 = 600$

**Q.3**

16 different results are possible (for each of the 4 possible signs chosen as the 1st sign, there are 4 possible signs for the 2nd sign, but Ps should list them to make sure that results are different)

- $1000 \div 10 \div 5 = 20$
- $1000 \times 10 \div 5 = 2000$
- $1000 \div 10 \times 5 = 500$
- $1000 \times 10 \div 5 = 50\ 000$
- $1000 \div 10 + 5 = 105$
- $1000 \times 10 + 5 = 10\ 005$
- $1000 \div 10 - 5 = 95$
- $1000 \times 10 - 5 = 9995$
- $1000 + 10 \div 5 = 1002$
- $1000 - 10 \div 5 = 998$
- $1000 + 10 \times 5 = 1050$
- $1000 - 10 \times 5 = 950$
- $1000 + 10 + 5 = 1015$
- $1000 - 10 + 5 = 995$
- $1000 + 10 - 5 = 1005$
- $1000 - 10 - 5 = 985$

**Q.4**

a) $75 \text{ kg} \times 6 = 420 \text{ kg} + 30 \text{ kg} = 450 \text{ kg}$ (after 6 weeks)

b) Had left after 6 weeks: $1000 \text{ kg} - 450 \text{ kg} = 550 \text{ kg}$

c) Had left 550 g but used 450 kg in 6 weeks, so after another 6 weeks might have left $550 \text{ g} - 450 \text{ kg} = 100 \text{ kg}$, which is enough for another week's supply.

*Answer:* Mr. Black might run out of coal after 13 weeks.

| **1** Geometric shapes 1 | Whole class activity  
(Or objects could be on a theme, e.g. Christmas) |
| Let’s remind ourselves about the different kinds of shapes.  
What can you tell me about these? Ps say what they know. Class agrees/disagrees or suggests other properties or descriptions. T has:  
• real objects: e.g. rectangular boxes, large dice, ball, pencil, hexagonal and cylindrical tins, briefcase, candle, globe, etc.  
• pictures: e.g. church, house, pyramid, igloo, tree, wheelbarrow, etc.  
• line drawings, e.g. BB:  
![Shapes diagram]

Ps might mention, e.g.:  
• 3-D shapes: size, colour, material, uses, solid, box, sphere, cylinder, cuboid, cube, pyramid, prism, cylinder, curved or plane faces, straight or curved edges, number of vertices, etc.  
• 2–D (or plane shapes): names of shapes, polygons, straight or curved sides or mixture of the two, number of sides, perimeter, vertices, regular or irregular, closed or open, parallel or perpendicular sides, right angles, etc.  
• 1–D: lines, straight or curved, horizontal, vertical, slanting, crosses itself or not, etc.  

10 min |

| **2** Geometric shapes 2 | Whole class activity  
T has set of solids to match those drawn on BB or on enlarged copy master.  
(If possible, Ps also have a set of solids and/or copies of sheet on desks.)  
Or T could have names on flash cards stuck to side of BB and Ps come to BB to choose and say the correct name.  
Discussion on properties.  
Ps come to BB or dictate to T |
| T has various models to show and also drawings of them on BB, e.g.  
a) What are the geometric names of these solids?  
T points to each in turn and Ps shout out its name if they know it. T writes it on BB.  
How many faces (edges, vertices) does it have?  
[Names: 1: cone; 2: cuboid; 3: cube; 4: prism (triangular-based); 5: sphere; 6: prism (hexagonal-based); 7: cylinder; 8: cuboid; 9: pyramid (square-based); 10: cylinder]  
b) Which of the solids has:  
i) at least one plane (flat) face  
   (1, 2, 3, 4, 6, 7, 8, 9, 10)  
ii) at least one face which is a triangle  
   (4, 9)  
iii) at least one face which is a circle  
   (1, 7, 10)  
iv) all its faces plane (flat)  
   (2, 3, 4, 6, 8, 9)  
v) at least one face which is a rectangle  
   (2, 3, 4, 6, 8, 9)  
vi) all its faces rectangles  
   (2, 3, 8)  
ix) at least one face which is a square  
   (3, 9)  
vii) all its faces square?  
   (3)  

20 min |
**Lesson Plan 46**

### Activity

#### Angles

Ps have 3 roughly torn pieces of paper and 2 straws on desks. T has large sheets for demonstration.

a) i) Take one piece of paper and fold it to make a **right angle**.
   Show it to me . . . now! P who responded correctly demonstrates to those who did not (or T demonstrates). Corrections made. T draws angle on BB. (Ps can draw and label angle in Ex. Bks.)

   ii) Take another piece of paper and fold it to make an angle **smaller** than a right angle.
   Show it to me . . . now! P who responded correctly demonstrates to those who did not (or T demonstrates). Corrections made. An angle smaller than a right angle is called an **acute angle**. T draws angle on BB. (Ps can draw and label angle in Ex. Bks.)

   iii) Take the 3rd piece of paper and fold it to make an angle **larger** than a right angle.
   Show it to me . . . now! P who responded correctly demonstrates to those who did not (or T demonstrates). Corrections made. An angle larger than a right angle is called an **obtuse angle**. T draws angle on BB. (Ps draw and label angle in Ex. Bks.)

b) Everyone stand up! Hold your 2 straws so that they are:

   i) parallel to each other . . . . now! T corrects Ps who are wrong. Who can explain what parallel means? (Lines stay the same distance apart, however far they are extended)

   ii) crossing each other . . . . now!

   iii) crossing each other but are also perpendicular . . . now! T corrects Ps who are wrong. Who can explain what perpendicular means? (The lines are at right angles to one another (or form an angle of \(90^\circ\)).

With your 2 straws, make a right (acute, obtuse) angle . . . now! Look at your neighbour's straws and correct them if they are wrong.

d) Open your *Pb* (Ex Bk) so that the two sides:

   i) are perpendicular . . . now! What angle do they make? (right)

   ii) make an angle less than a right angle . . . now! What is this kind of angle called? (acute)

   iii) make an angle greater than a right angle . . . now! What is this kind of angle called? (obtuse)

---

### Notes

Whole class activity but folding done individually. Angles shown in unison on BB:

- **right angle**
- **acute angle**
- **obtuse angle**
- **parallel lines**

Ps find examples of such lines in the classroom.

---

**PbY4a, page 46**

Q.1 Read:

a) **How many rectangles are in this diagram?**

b) **How many rectangles would be in 874 such diagrams?**

c) **What is the area of the diagram?**

d) **What is the perimeter of the diagram?**

Deal with one part at a time. Ps could show results on scrap paper or slates on command. Mistakes discussed and corrected.

**Solution:**

a) 9  b) 7623  c) \(A = 4\) square units  d) \(P = 8\) units

---

Individual work, monitored (helped)

Diagram drawn on BB:

Calculation done on scrap paper or in Ex. Bks.

Reasoning, agreement, self-correction, praising

BB: \[

Solution: |

Individual (or paired) work, monitored, helped  
Drawn on BB or use enlarged copy master or OHP (or use squared board or pin-board)  
Discussion, reasoning, agreement, self-correction, praising  
**Extension**  
- Mark the parallel lines by drawing over them in the same colour (or by drawing arrows).  
- Mark the perpendicular sides by colouring a square in the corner.  

**Notes**

Individual work, monitored, helped  
Diagram drawn on BB.  
Reasoning, agreement, self-correcting, praising  
BB: 1 cm → 875 cm  
a) AB = AC = 3 × 875 m  
   = 2625 m  
   = 2 km 625 m  
b) P = 8 × 875 m = 7000 m  
   = 7 km
**Activity 7**

*PbY4a, page 46*

a) Ps have copies of copy master on desks.

Mark the grid points which are 1 cm away from

i) point A  ii) line segment e  iii) line f.

Review at BB with whole class. Ps agree on number of points.

Point out that in iii), only 18 points can be shown on this grid but if you imagine the line going on and on in both directions, there will be a never-ending (infinite) number of points. T shows (or elicits if some Ps remember it) the symbol for infinity (a point which can never be reached): ∞

**Solution:**

i) point A  ii) line segment e  iii) line f

![Grid Points](image)

here, but really ∞

b) Q.4  Read: *Measure 2 cm from point C on the lines. Join up the points. What shape have you made?*

I will give you a minute, then you must write only one word on your slates which describes both shapes and show me it when I say.

Show me . . . now! (rectangle)

What other shape could you have written for b)? (Square)

T confirms by showing already prepared solution.

**Solution:**

a)  

![Shape a)](image)

b)  

![Shape b)](image)

Individual work, monitored
Ps use rulers to measure in a) as points are not on grid inter-sections.

In unison
Class shouts out in unison.

Drawn on SB or OHT or use enlarged copy master for demonstration only!

Agreement, self-correcting, praising
R: Parallel, perpendicular lines. Calculations
C: Shapes (1-D, 2-D). Right angles
E: Problems

Activity

1

Multiplication practice

a) How many triangles can you count in these shapes?

BB: i) ii) iii)

Ps come to BB to show the triangles. (T helps them to draw each one on BB if necessary.) Class agrees on final number.

b) How many triangles could we count in 412 such shapes? Ps do calculations in Ex. Bks then show results, one part at a time, on command. Ps who responded incorrectly come to BB to work through calculation with help of class. Corrections made.

BB:

\[ 412 \times 10 = 4120 \]

\[ 412 \times 16 = 412 \times (10 + 6) \]

\[ = 4120 + 2472 \]

\[ = 6592 \]

Extension

c) On how many such shapes could we count 9600 triangles?

Elicit that the operation needed is division. Ps do calculations in Ex. Bks. Review as in b) whole class.

BB:

\[ 9600 \div 10 = 960 \]

\[ 960 \div 16 \neq 960 \div 10 + 960 \div 6 \]

\[ = 960 + 1600 = 2560! \]

2

Parallel and perpendicular lines

Let's mark the parallel and perpendicular lines on these diagrams.

BB: a) b) c)

Ps come to BB to colour over in different colours (or mark with arrowheads) the sets of parallel lines, then to draw squares at all the right angles. Class points out errors or omissions.

Who can think of other questions to ask about the diagrams? e.g.

In each diagram:

i) What shapes can you see?

ii) How many rectangles (squares, triangles) can you see?

iii) How many pairs of parallel (perpendicular) lines can you count?

etc.

Class (T) decides which ones to solve (some with T's help).

Lesson Plan

Notes

Whole class activity but individual calculation

Drawn on BB or use enlarged copy master or OHP

Ps might remember iii) from Lesson 45.

Discussion, reasoning, agreement, praising

Individual work, monitored

Responses shown on scrap paper or slates in unison.

or C:

\[ 412 \times 16 = 412 \times (10 + 6) \]

\[ = 4120 + 2472 \]

\[ = 6592 \]

Individual work, monitored

Reasoning, agreement, praising

Ps might remember iii) from Lesson 45.

Whole class activity

Drawn on BB or use enlarged copy master or OHP

At a good pace

Agreement, praising

Extra praise for 'clever' questions.

e.g.in a):

i) rectangles

ii) 9 rectangles

iii) 6 pairs of parallel lines

9 pairs of perpendicular lines
### Lesson Plan 47

#### Activity

**3**

**Folding paper**

Ps have 4 pieces of triangular or circular shaped paper on desks. Fold a piece of paper so that:

- a) it has 2 parallel sides  
  Show me . . . now!
  (T demonstrates how rulers should be perpendicular to the sides!)

- b) it has a pair of perpendicular lines.  
  Show me . . . now!
  (Elicit that they form a right angle.  Ps mark it with a square.)

- c) it has an angle smaller than a right angle.  
  Show me . . . now!
  (Elicit/tell that this is called an acute angle.)

- d) it has an angle greater than a right angle.  
  Show me . . . now!
  (Elicit /tell that this is called an obtuse angle.)

**Notes**

**Whole class activity but individual folding.**

(or a roughly torn sheet of paper which has no parallel or perpendicular sides to start with)

Paper shown in unison.

Ps check neighbour's lines.

Mistakes corrected.

Agreement, praising

(Or already drawn on SB or OHT)

Discussion, agreement, praising

Ps could draw the 3 triangles in Ex. Bks (using rulers) and label them.

Ps could draw the 3 triangles in Ex. Bks (using rulers) and label them.

---

**4**

**PbY4a, page 47**

Q.1 Read: *In your exercise book, make a plan, estimate, calculate, check and write the answer as a sentence.*

Deal with one part at a time. Ps read the question themselves and solve it in Ex. Bks. Set a time limit for each question.

Review with whole class. Ps come to BB to show their solution, explaining reasoning. Who agrees? Who thinks something else? Who did it a different way? Who made a mistake? What kind of mistake? etc.

**Solutions:**

a) *The highest mountain in Europe is Mont Blanc which is 4810 m high. It is 4032 m lower than Mount Everest.*

**How high is Mount Everest?**

**Plan:**  
MB: 4810 m  
ME: 4810 + 4032 m

**E:**  
5000 + 4000 = 9000

**C:**  
\[
\begin{array}{c}
4 \ 8 \ 1 \ 0 \\
\hline
4 \ 0 \ 3 \ 2 \\
\hline
8 \ 8 \ 4 \ 2
\end{array}
\]

**Answer:** *Mount Everest is 8842 m high.*

---

**Notes**

Individual work, monitored, helped

(T could have relevant maps on hand to show where each place is, and some interesting facts about each in mind, although give Ps the chance to tell class what they know first.)

Reasoning, agreement, checking, self- correction, praising

Check against estimate, then with a subtraction (or with a calculator).

Feedback for T
b) The River Danube is 2840 km long and the River Nile is 6670 km long. How much longer is the River Nile than the River Danube?

Data: RD: 2840 km RN: 6670 km

Plan: 6670 km – 2840 km = 3830 km

Answer: The River Nile is 3830 km longer than the River Danube.

c) The deepest point in the Pacific Ocean is near Japan and is 10 680 m below sea level. The highest point in Japan is 3776 m above sea level. What is the difference between these two points?

Data: DP: 10 680 m below sea level HP: 3776 m above sea level

Plan: 10 680 m + 3776 m = 14 456 m

Answer: The difference between the two points is 14 km 456 m.

Q.2 Read: Mark the parallel and perpendicular lines on this capital E.

Ps mark the parallel lines with arrowheads (or colour over in the same colour) and draw (or colour) squares to show the perpendicular lines (right angles).

Review at BB with whole class. Ps come to BB. Class agrees/disagrees. Mistakes corrected.

Read: We started to draw the letter E on this grid in different positions and sizes. Complete the drawings.

Set a time limit. Ps who finish first come to BB or OHP to complete the drawings. Review with whole class. Class agrees/disagrees with solutions. Mistakes discussed/corrected.

Solution: e.g.

Accept any correct completion.

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

Agreement, self-correcting, praising

Agreement, self-correction, praising

Which shapes are similar? (All of them)

Which shapes are congruent? [a), b), c) and g) on solution opposite but Ps might have different ones]

Revise what similar and congruent mean if Ps cannot remember.

</table>
Activity

Calculation practice

a) How many congruent (equal) squares are needed to make a cube like this? (T holds up a large cubic box) Show me . . . now! (6)

b) How many congruent (equal) squares would be needed to make 1223 such cubes? Show me . . . now! (7338)
P who responded incorrectly works through the calculation on BB with help of class.

c) How many such cubes could be made from 2394 congruent (equal) squares? Show me . . . now! (399)

d) How many such cubes could be made from 2397 congruent (equal) squares? (399, r 3) Same as c), but 3 extra squares.

Pentagons

T has BB or OHT already prepared. What kind of shapes are these? (pentagons, because they have 5 straight sides) Who can draw a line through the pentagon to make:

a) a triangle and a quadrilateral
b) a triangle and a pentagon

c) a triangle and a hexagon
d) two quadrilaterals?

Diagonals 1

a) A castle has 5 towers. (T points to circles on LH diagram.) Each tower is joined to the towers next to it by a wall. (T points to sides of pentagon.) Each tower is joined to the towers which are not next to it by straight paths. (T points to diagonals.)

Let's think of it mathematically. Here is a simpler diagram of the castle. What shape is it? (pentagon) Let's draw a dot at each corner to represent the 5 castles. What is its mathematical name? (vertex) What do we call the lines around the outside? (sides)

Let's join up each vertex to all the vertices which are not next to it. Ps come to BB to draw straight lines with BB ruler. Class points out any they have missed. These lines are called diagonals.

b) Draw a triangle, a quadrilateral, a pentagon and a hexagon in your Ex. Bks. They need not be regular polygons (i.e. the sides do not have to be the same length). Now draw their diagonals, keep count as you draw them and write the number below your diagram.

Review at BB with whole class. T has polygons drawn on BB. Ps come to BB to draw the diagonals. Class agrees/disagrees. Ps add any they missed to diagrams in Ex. Bks.

BB:
Lesson Plan 48

**Activity 4**

**Diagonals 2**

Ps each have a square and rectangular sheet of paper on desks.

a) Fold your square along its diagonals. Open it out. How many diagonals can you see? (2) How many angles have you made at its centre? (4) Measure them with your folded right angle. What kind of angles are they? (right angles) What can you say about the 2 diagonals of a square? (They are perpendicular.)

b) Now fold your square along its diagonals. Open it out. How many diagonals can you see? (2) How many angles have you made at its centre? (4) Measure them with your folded right angle. What kind of angles are they? (2 acute angles and 2 obtuse angles) Ps write initial letters in each angle. Elicit that these diagonals are not perpendicular.

---

**Notes**

Whole class activity but individual folding. T demonstrates and Ps copy. Agreement, praising

---

**Extension**

1. How much longer? (1905 km – 1529 km = 376 km)
2. Which was longer, L → P or M → F? (LP > MF) (N.B. M → P is common to both) 87 km

---

**Lesson Plan 48**

**Notes**

Individual work, monitored, helped
T could have large map of to show the countries and cities.
Reasoning, agreement, self-correcting, praising

Ps could draw a diagram for part a) if it will help them:

Q1 Read: In your exercise book, make a plan, estimate, calculate, check and write the answer as a sentence.

Deal with one part at a time. Ps read the question themselves and solve it in Ex. Bks. Set a time limit for each question.

Review with whole class. Ps come to BB to show their solution, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

**Solutions:**

a) The distance between Budapest and London (UK) is 1450 km. It is 5950 km less than the distance between Washington and Budapest. How far is Washington from Budapest?

**Plan:**

- B → L: 1450 km
- B → W: 1450 km + 5950 km

**E:**

- 1000 + 6000 = 7000
- \[ \begin{array}{c} 1450 \cr + \cr 5950 \cr \hline 7400 \end{array} \]

**Answer:** Washington is 7400 km from Budapest.

b) A tourist drew this rough map of where he had travelled.

i) How far did he travel from Lisbon to Budapest?

**Plan:**

- LM + MP + PF + FV + VB
- E: 600 + 1300 + 600 + 700 + 200 = 3400 (km)

**Answer:** He travelled 3434 km.

ii) Which part of his route was longer, Lisbon to Paris or Paris to Budapest?

**Plan:**

- LP = 647 km + 1258 km = 1905 km
- PB = 560 km + 727 km + 242 km = 1529 km

**Answer:** Lisbon to Paris was longer.

---

**Lesson Plan 48**

**Notes**

Whole class activity but individual folding. T demonstrates and Ps copy. Agreement, praising

---

**Extension**

1. How much longer? (1905 km – 1529 km = 376 km)
2. Which was longer, L → P or M → F? (LP > MF) (N.B. M → P is common to both) 87 km
Q.2 Read: In a dress pattern, there are these different shapes of pocket to choose from.

BB: \[ A \ B \ C \ D \ E \ F \ G \ H \ T \ I \ K \ L \]

List the shapes for which each statement is true.

Set a time limit. Review with whole class. P reads each statement and Ps dictate letters to T. Class agrees/disagrees or adds omissions. Mistakes discussed and corrected

**Solution:**

a) *It has only straight sides.* (A, B, D, F, G, H, J, L)
   
   What do we call plane shapes with straight sides? (Polygons)

b) *It has at least one straight side.* (A, B, C, D, E, F, G, H, J, K, L)

c) *It has only curved lines.* (I)

d) *It is a pentagon.* (D, J)

e) *It has parallel sides.* (A, B, D, F, H, J, L)

f) *It has perpendicular sides.* (B, D, E, F, H, J, L)

g) *It is a quadrilateral.* (A, B, F, G, L)

h) *It is a hexagon.* (H)

i) *It is a rectangle.* (F, L)

j) *It is a square.* (L)

---

**Extension**

Let’s put the shapes into sets. How could we do it? Ps suggest ways and T chooses one. T draws diagrams on BB and Ps suggest labels. Ps come to BB to write letters in appropriate set.

BB: e.g.

- **Plane Shapes**
  - **Polygons**
    - \[ A \ B \ C \ D \ E \ F \ G \ H \ T \ I \ K \ L \]
  - **Quadrilaterals**

---

**Compass points**

T has a large N stuck to the wall of the classroom which faces North (or if no wall faces north, use the BB wall).

Everyone stand up and face North. T gives instructions on how Ps should turn. Through how many right angles have you turned? Class shouts out in unison or T chooses Ps at random. e.g.

a) *Turn to the right:* i) from N to face E (1 right angle)  
   ii) from E to face W (2 right angles)  
   iii) from W to face NW (half a right angle)

b) *Turn to the left:* i) from N to face SW (1 \( \frac{1}{2} \) right angles)  
   ii) from SW to face SE (1 right angle)  
   iii) from S to face W (3 right angles)

etc. Ps can give instructions too!
### Activity

**PbY4a, page 48**

Q.3 Read: *Draw a line through the point given so that it is parallel to the other two lines*

Review at BB with whole class. Ps finished first come to BB to draw their solutions. Who agrees? Who drew a different line? etc. Deal with all cases. Mistakes corrected.

**Solution:**

![Image of parallel lines](image)

Where in the classroom can you see sets of parallel lines?

MEP: Feeder Primary Project

Y4

**Activity**

(Continued)

b) Let’s count the edges, faces and vertices of each solid and show the information in this table. Ps come to BB or dictate to T. Class agrees/disagrees. Do you notice a connection between the rows?

<table>
<thead>
<tr>
<th></th>
<th>Cuboid</th>
<th>Square-based pyramid</th>
<th>Cuboid</th>
<th>Triangle-based pyramid</th>
<th>Cube</th>
<th>Triangle-based prism</th>
</tr>
</thead>
<tbody>
<tr>
<td>Edges</td>
<td>12</td>
<td>8</td>
<td>12</td>
<td>6</td>
<td>12</td>
<td>9</td>
</tr>
<tr>
<td>Faces</td>
<td>6</td>
<td>5</td>
<td>6</td>
<td>4</td>
<td>6</td>
<td>5</td>
</tr>
<tr>
<td>Vertices</td>
<td>8</td>
<td>5</td>
<td>8</td>
<td>4</td>
<td>8</td>
<td>6</td>
</tr>
</tbody>
</table>

BB:

- Which of the solids are made from congruent shapes? (4, 5)
- Which of them have 6 faces which are rectangles? (1, 3 and 5)
- How many of a cuboid’s faces can be square? (0 as in cuboid 1, or 2 as in cuboid 3, or 6 as in the cube)
- Who can think of other things to say about the shapes? (e.g. Ps might point out parallel edges or faces, perpendicular edges or faces, congruent faces, number of edges meeting at each vertex, etc.)

**Extension**

T tells class that a solid with many plane faces is called a polyhedron. (Compare with a polygon, which is a plane shape with many straight sides.)

This solid (T holds up the triangle-based pyramid) is also called a tetrahedron, because it has 4 plane faces (tetra means 4), but because all its 4 plane faces are congruent (triangles with equal sides and angles), it is called a regular tetrahedron.

This solid (T holds up a cuboid) is also called a hexahedron, because it has 6 plane faces (hexa- means 6), but this solid (T holds up a cube) is a hexahedron with all its 6 plane faces congruent (equal squares), so it is called a regular hexahedron.

**Lesson Plan 49**

**Notes**

Whole class activity
Table drawn on BB or use enlarged copy master or OHP
At a good pace
Agreement, praising
Elicit that:
BB: \( e + 2 = f + v \)

Discussion involving as many Ps as possible.
Encourage Ps to speak in sentences and to try to use the correct vocabulary.
Praise all positive contributions
T repeats more clearly when necessary.

Whole class discussion on geometric names of solids.
BB: poly- means ‘many’
-hedron means ‘a solid with plane faces’
tetra- means ‘4’
hexa- means ‘6’
polyhedron, tetrahedron, hexahedron

**PbY4a, page 49**

Q.1 Read: *Do the calculation for b) and c) in your exercise book.*

a) How many unit cubes does this cube contain?

b) How many unit cubes would 1176 of these cubes contain?

c) How many of these large cubes could be built from 9648 unit cubes?

Deal with one part at a time. Ps could show results on scrap paper or slates on command. Mistakes discussed/corrected.

**Solution:** a) 8  b) 9408  c) 1206

Individual work, monitored
Helped
Diagram drawn on BB and/or Ps have such cubes on desks.
Calculations done in Ex. Bks.
Reasoning, agreement, self-correction, praising

**Extension**

How many such large cubes would contain 9501 unit cubes?

Ps come to BB or dictate to T, explaining reasoning

**BB:**

\[
\begin{array}{c|c|c}
11187 & 11187 & 11187 \\
89501 & 89501 & 89501 \\
11187 & 11187 & 11187 \\
\end{array}
\]

**Check:**

\[
9501 = 8 \times 1187 + 5
\]

\[
= 9496 + 5 = 9501
\]

**Answer:** 1187 large cubes would contain 9496 unit cubes and 5 unit cubes would be left over.
Activity 5

PbY4a, page 49

Q.1 a) Read: In each diagram, mark
• the right angles in red like this,
• angles smaller than a right angle in blue like this,
• angles larger than a right angle in green like this.

T could do Shape B with the whole class first if necessary. Ps colour remaining shapes. Set a time limit. Review at BB with whole class. Ps come to BB or T points to each angle in turn and Ps say which colour (or what kind of angle) it is. Mistakes corrected.

Elicit that the blue angles are acute and the green angles are obtuse angles.

Solution:

b) Read: List the letters of the shapes for which each statement is true.

Set a time limit. Review with whole class. P reads each statement and Ps dictate letters to T. Class agrees/disagrees or adds omissions. Mistakes discussed and corrected

Solution:

i) It is a square. (F)
ii) It is a rectangle. (C, F)
iii) It is a quadrilateral. (A, B, C, F)
iv) It is a triangle. (D, E, H)
v) It has at least 1 right angle. (B, C, D, F)
vi) Every angle is a right angle. (C, F)

vii) It has at least one angle smaller than a right angle. (A, B, D, E, H)
viii) All its angles are smaller than a right angle. (E)
ix) It has at least one angle larger than a right angle. (A, B, G, H)

x) All its angles are larger than a right angle. (G)

| PbY4a, page 49, Q.3 Read: Two sides of a quadrilateral have been drawn. Complete the shape so that:  
   a) it has at least one right angle  
   b) 2 of its sides are parallel  
   c) it has 2 pairs of parallel sides.  
   Set a time limit. Review at BB with whole class. Ps come to BB to draw lines and mark the features. Who agrees? Who drew a different shape? etc. Mistakes discussed and corrected.  
   Solution: e.g.  
   ![](image)  
   **40 min** |
| **7** Secret shapes  
   a) Draw a shape in your Ex. Bks. T chooses Ps to stand up and describe their shape. Rest of class must work out what it is.  
   b) I am thinking of a shape. Ask me questions to find out what it is.  
   (e.g. square: Is it a plane shape? (yes) Is it a polygon? (yes)  
   Does it have more than 4 sides? (no) Does it have a right angle? (yes) Are all its angles right angles? (yes) Are all its sides equal? (yes) It is a square! (yes)  
   Repeat for other shapes if there is time. Ps can think of a shape and answer the questions too (with T’s help).  
   **45 min** | Drawn on BB or use enlarged coy master or OHP  
   Reasoning, agreement, self-correcting, praising  
   Other solutions are possible.  
   **Extension**  
   T tells class that a quadrilateral in which both pairs of opposite sides are parallel (as in RH diagram) is called a BB: parallelogram  
   Whole class activity  
   Encourage Ps to speak in sentences and to try to use mathematical terms. T helps with descriptions if necessary.  
   In good humour!  
   Encourage logical questioning.  
   Ps can keep note of clues on scrap paper.  
   Praising, encouragement only |
