

Mathematics Enhancement Programme**TEACHING SUPPORT: Year 4****FACTS TO KNOW AND REMEMBER****Multiplication tables**Up to 10×10 **Units**

10 mm = 1 cm

1000 mm = 1 m

100 cm = 1 m

1000 m = 1 km

10 ml = 1 cl

1000 ml = 1 litre

100 cl = 1 litre

1000 g = 1 kg

1000 kg = 1 tonne

60 seconds = 1 minute

60 minutes = 1 hour

24 hours = 1 day

7 days = 1 week

52 weeks = 1 year

12 months = 1 year

Numbers

1 h = $\frac{1}{100}$

1 t = $\frac{1}{10}$

1 T = 10

1 H = 10 T = 100

1 Th = 10 H = 100 T = 1000

Negative Numbers

Compass Points**Roman Numerals**

1	I
5	V
10	X
50	L
100	C
500	D
1000	M

Even / Odd

Whole numbers ending in 0, 2, 4, 6, 8 are EVEN (and divisible by 2 with no remainder).

Whole numbers ending in 1, 3, 5, 7, 9 are ODD (and have remainder 1 when divided by 2).

Equivalent Fractions

$$\frac{1}{2} = \frac{2}{4} = \frac{4}{8} = \dots$$

$$\frac{1}{10} = \frac{5}{50} = \frac{10}{100} = \dots$$

Adding/Subtracting Fractions

$$\frac{a}{b} + \frac{c}{b} = \frac{a + c}{b}$$

(a , b and c are natural numbers, that is, numbers used for counting)

$$\frac{a}{b} - \frac{c}{b} = \frac{a - c}{b}$$

Decimals

$$0.a = \frac{a}{10} \quad (a = 0, 1, \dots, 9)$$

$$0.ab = \frac{a}{10} + \frac{b}{100} \quad (a, b = 0, 1, 2, \dots, 9)$$

Shapes : 2D*Triangle* (3 straight sides)*Quadrilateral* (4 straight sides)*Rectangle* (opposite sides equal and parallel, and four right angles)*Square* (all sides equal and four right angles)*Pentagon* (five straight sides)*Hexagon* (six straight sides)*Octagon* (eight straight sides)

(Note that all squares are rectangles and all rectangles are quadrilaterals.)

Shapes : 3D*Cube* (all sides equal so each face is a square)*Cuboid* (all opposite sides equal so each face is a rectangle)*Sphere*

Square-based pyramid

Triangle-based prism

Triangle-based pyramid

Convex and Concave Shapes

Concave: a straight line cannot always be drawn between any two points on the shape that is always inside the shape. In each of the examples below, the two points are *inside* the shape but the line drawn between them passes *outside* the shape.

Convex: a straight line drawn between any two points on the shape will always lie *inside* the shape, as can be seen from the example below.

Symmetry

The whole shape has one line of symmetry.

Four lines of symmetry are shown here.

Similarity

These shapes are similar.

These shapes are similar.

(The sides are in the same ratio, that is, 1 : 1 in (a) and 1 : 2 (i.e, 2 : 4 and 3 : 6) in (b).

Congruence

Congruent shapes are identical in shape and size but can be rotated or reflected; the 4 shapes shown are congruent.

Parallel and Perpendicular Lines

Lines are perpendicular

Lines are parallel

Divisor or Factor and Multiple

Any whole number that divides exactly into a whole number with no remainder is called a *divisor* or *factor* of the number.

For example, 1, 2, 3, 4, 6 and 12 are all divisors (or factors) of 12.

Any whole number that can be divided by a whole number with no remainder is called a *multiple* of the number.

For example, 5, 10, 15, 20, . . . are all multiples of 5.

Perimeter, Area and Volume

The *perimeter* is the total distance around the outside of a 2D shape.

For example,

perimeter = $4 + 2 + 4 + 2 = 12$ cm

The *area* is the quantity inside a 2D shape.

For example,

area = 8 square cm

The *volume* is the number of cubic units that will exactly fill a 3D shape.

For example,

volume = $3 \times 2 \times 4 = 24$ cubic cm

Illustrating Data

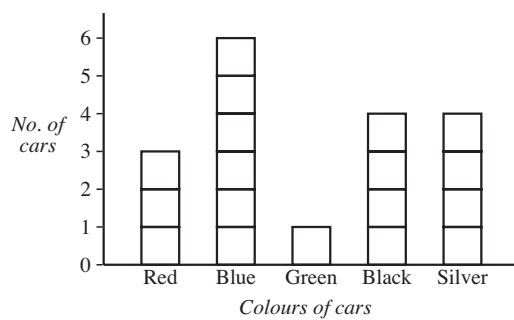

You can illustrate data with a:

Tally Chart

This tally chart represents 18 items of data

Bar Chart

This bar chart represents 18 items of data (3 Red, 6 Blue, 1 Green, 4 Black and 4 Silver cars)

Pictogram

This pictogram represents the 18 cars above.

A pictogram must always have a key.
