R: Mental calculations  
 C: **Hundredths and percentage. Multiplication of fractions by natural numbers**  
 E: *Ratio and percentage*

## Lesson Plan

# 111

**Activity****1****Hundredths and percentage**

Ps each have a 10 cm by 10 cm square grid on desks and T has larger version for demonstration. T asks some questions about the square and writes Ps' answers on BB.

What length are the edges of the square? Ps measure with rulers. (10 cm)

What is the area of the square? ( $A = 10 \text{ cm} \times 10 \text{ cm} = 100 \text{ cm}^2$ )

What is the area of 1 grid square? ( $1 \text{ cm}^2$ )

If we think of the area of the large 10 cm square as 1 unit, what part of the unit is the area of each grid square? (1 hundredth)

BB:

[Percentages added later – see below]

- a) Colour *blue* 1 half of the area of your large square.  
 How many grid squares have you coloured *blue*? (50)  
 What area have you coloured *blue*? ( $50 \text{ cm}^2$ )  
 How many hundredths have you coloured *blue*? (50 hundredths)  
 T writes an equation to show the equivalent fractions. (BB)
- b) Colour *red* 1 fifth of the area of your large square.  
 How many grid squares have you coloured *red*? (20)  
 What area have you coloured *red*? ( $20 \text{ cm}^2$ )  
 How many hundredths did you colour *red*? (20 hundredths) Who can write an equation to show the equivalent fractions? (BB)
- c) Colour *green* an area of  $17 \text{ cm}^2$ .  
 How many grid squares have you coloured *green*? (17)  
 How many hundredths did you colour *green*? (17 hundredths)  
 Who can write it as a fraction? (BB)
- d) What part of the large square have you coloured altogether?  
 What operation should we write? (addition) P comes to BB or dictates to T. Agree that 100 should be the common denominator.  
 What area have you coloured altogether? ( $A = 87 \text{ cm}^2$ )  
 What part of the square is not coloured? (BB) [ $A = 13 \text{ cm}^2$ ]
- T: We also call 1 hundredth one percent and write it like this. (BB)  
 Who can write the coloured parts of the square as percentages?  
 Ps come to BB to write percentages on diagram (as above). Class points out errors.  
 What percentage is the area of the whole unit square? (100%)
- T: 'Per cent' means 'out of 100', so when we talk about percent we mean that the whole unit has been divided into 100 equal parts, so each part is 1 hundredth or 1 out of 100 or 1 percent.'

**Notes**

Whole class activity but individual colouring

Drawn on BB or use enlarged copy master or OHP for demonstration only!

Ps should have accurate 10 cm squares on desks (or use copy master)

Discussion, agreement, praising

BB:  $A = 100 \text{ cm}^2 = 1 \text{ unit}$   
 Area of grid square =  $1 \text{ cm}^2$

$$1 \text{ cm}^2 = \frac{1}{100} \text{ of } 1 \text{ unit}$$

Ps shout out in unison or T chooses Ps at random.

$$\text{BB: } \frac{1}{2} = \frac{50}{100}$$

$$\frac{1}{5} = \frac{20}{100}$$

$$\text{BB: } \frac{17}{100}$$

BB: Part coloured:

$$\frac{50}{100} + \frac{20}{100} + \frac{17}{100} = \frac{87}{100}$$

BB: Part not coloured:

$$\frac{100}{100} - \frac{87}{100} = \frac{13}{100}$$

BB: 1 percent: 1%

$$\frac{1}{100} \rightarrow 1\%$$

$$1 \text{ unit} = \frac{100}{100} \rightarrow 100\%$$

10 min

**Y5***Lesson Plan 111***Activity****2****PbY5b, page 111**

Q.1 a) Read: *Use a ruler to draw the required parts of this 10 cm line.*

Deal with one part at a time or set a time limit. Elicit that BB: 10 cm = 100 mm. Ps calculate lengths, measure, draw and write lengths below line segments.

Review with whole class. Ps come to BB or dictate lengths to T, explaining reasoning. Class agrees/disagrees.

Mistakes or inaccuracies corrected.

*Solution:*

b) Read: *Express the fractions in hundredths and percentages.*

Ps come to BB to fill in boxes, explaining reasoning, with T's help in converting the fifth and quarter to hundredths.

Ps work in Pbs too. Elicit that the number of hundredths (i.e. the number of mm) is the same as the percentage.

*Solution:*

$$\text{i) } \frac{1}{5} = \frac{20}{100} \rightarrow \underline{20\%} \quad \text{ii) } \frac{1}{4} = \frac{25}{100} \rightarrow \underline{25\%}$$

$$\text{iii) } \frac{85}{100} \rightarrow \underline{85\%} \quad \text{iv) } \frac{41}{100} \rightarrow \underline{41\%}$$

**Extension**

Let's write additions and subtractions using these fractions. Ps come to BB or dictate to T, explaining reasoning. Class points out errors. What is the result as a percentage?

BB: e.g.

$$\frac{1}{5} + \frac{1}{4} = \frac{4 + 5}{20} = \frac{9}{20} = \frac{45}{100} \rightarrow 45\%$$

$$\frac{85}{100} - \frac{1}{4} = \frac{85 - 25}{100} = \frac{60}{100} \rightarrow 60\% \quad (= \frac{3}{5}) \text{ etc.}$$

*16 min*

**Notes**

Individual work, monitored, helped, corrected

Drawn on BB or use enlarged copy master (demonstration only)

Agreement, self-correction, praising

(or T has solution already prepared and uncovers each line segment as it is dealt with)

BB: 10 cm = 100 mm

i)  $100 \text{ mm} \div 5 = \underline{20 \text{ mm}}$

ii)  $100 \text{ mm} \div 4 = \underline{25 \text{ mm}}$

iii) 85 hundredths: 85 mm

iv) 41 hundredths: 41 mm

Whole class activity

(or individual trial first if Ps wish)

Reasoning, agreement, praising

T: To change a fraction to a percentage, we first expand it to hundredths.

Whole class activity

At a good pace

Involve several Ps.

Reasoning, agreement, praising

**3****Problem**

Listen carefully, do the calculation in your *Ex. Bks* and show me the answer when I say.

a) *There are 100 pupils in Year 5 and 27 of them wear glasses. What percentage of pupils in Y5 do not wear glasses?*

Show me the answer . . . now! (73%)

P answering correctly explains at BB to Ps who were wrong. Mistakes discussed and corrected.

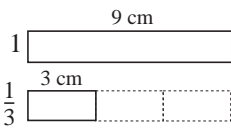

$$\text{BB: } 1 - \frac{27}{100} = \frac{100}{100} - \frac{27}{100} = \frac{73}{100} \rightarrow 73\%$$

Whole class activity but individual calculation

T repeats slowly to give Ps time to think.

In unison on slates or scrap paper

Reasoning, agreement, praising

Y5		Lesson Plan 111
<p><b>Activity</b></p> <p>3</p>	<p>(Continued)</p> <p>b) <i>If the names of all the pupils were put into a bag and one name was taken out at random, which outcome has more chance of happening:</i></p> <p>1) <i>the pupil wears glasses; or 2) the pupil does <u>not</u> wear glasses?</i></p> <p>Show me . . . now! Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) <math>\frac{3}{4} \times 4 = \frac{3}{4} + \frac{3}{4} + \frac{3}{4} + \frac{3}{4} = \frac{12}{4} = 3</math></p> <p>b) <math>\frac{2}{3} \times 5 = \frac{2}{3} + \frac{2}{3} + \frac{2}{3} + \frac{2}{3} + \frac{2}{3} = \frac{10}{3} = 3\frac{1}{3}</math></p> <p>c) <math>\frac{4}{7} \times 6 = \frac{4}{7} + \frac{4}{7} + \frac{4}{7} + \frac{4}{7} + \frac{4}{7} + \frac{4}{7} = \frac{24}{7} = 3\frac{3}{7}</math></p> <p>d) <math>\frac{2}{9} \times 3 = \frac{2}{9} + \frac{2}{9} + \frac{2}{9} = \frac{6}{9} = \frac{2}{3}</math></p> <p style="text-align: right;"><i>40 min</i></p>	<p style="text-align: center;"><b>Notes</b></p> <p>Individual work, monitored (helped)</p> <p>Written on BB or SB or OHT</p> <p>Reasoning, agreement, self-correction, praising</p> <p>Show on diagrams or models or number line if problems or disagreement.</p> <p>Feedback for T</p> <p>e) <math>\frac{7}{6} \times 12 = \frac{7}{6} + \frac{7}{6} + \frac{7}{6}</math>  <math>+ \frac{7}{6} + \frac{7}{6} + \frac{7}{6} + \frac{7}{6} + \frac{7}{6} + \frac{7}{6}</math>  <math>+ \frac{7}{6} + \frac{7}{6} + \frac{7}{6} = \frac{84}{6} = 14</math></p>
<p><b>8</b></p>	<p><b>PbY5b, page 111, Q.5</b></p> <p>Read: <i>In your exercise book, calculate the sums and differences in two different ways.</i></p> <p>Let's look carefully at part a). What do you notice? (Denominators are equal so only the numerators need to be dealt with.)</p> <p>If the calculation was</p> <p>BB: <math>(3 + 7) \times 2</math></p> <p>which two ways could we do it? Two Ps come to BB to show them.</p> <p>BB: 1) <math>(3 + 7) \times 2 = 10 \times 2 = 20</math></p> <p>or 2) <math>(3 + 7) \times 2 = 3 \times 2 + 7 \times 2 = 6 + 14 = 20</math></p> <p>Agree that that both are correct.</p> <p>Let's calculate the fractions in these two different ways.</p> <p>Ps come to BB to or dictate what T should write (with T's help where needed). Class agrees/disagrees. Ps write the two ways in <i>Ex. Bks.</i></p> <p><i>Solution:</i> e.g.</p> <p>a) 1) <math>\left(\frac{3}{5} + \frac{7}{5}\right) \times 2 = \frac{10}{5} \times 2 = 2 \times 2 = 4</math></p> <p>2) <math>\left(\frac{3}{5} + \frac{7}{5}\right) \times 2 = \frac{3}{5} \times 2 + \frac{7}{5} \times 2 = \frac{6}{5} + \frac{14}{5} = \frac{20}{5} = 4</math></p> <p>b) 1) <math>\left(\frac{6}{7} - \frac{5}{3}\right) \times 3 = \frac{18 - 35}{21} \times 3 = -\frac{17}{21} \times 3 = -\frac{51}{21} = -\frac{17}{7}</math></p> <p>2) <math>\left(\frac{6}{7} - \frac{5}{3}\right) \times 3 = \frac{6}{7} \times 3 - \frac{5}{3} \times 3 = \frac{18}{7} - 5 = \frac{18 - 35}{7} = -\frac{17}{7}</math></p> <p>c) 1) <math>\left(\frac{1}{2} + \frac{7}{3}\right) \times 6 = \frac{3 + 14}{6} \times 6 = \frac{17}{6} \times 6 = \frac{17}{1} = 17</math></p> <p>2) <math>\left(\frac{1}{2} + \frac{7}{3}\right) \times 6 = \frac{1}{2} \times 6 + \frac{7}{3} \times 6 = \frac{6}{2} + \frac{42}{3} = 3 + 14 = 17</math></p> <p style="text-align: right;"><i>45 min</i></p>	<p>Whole class activity</p> <p>Written on BB or SB or OHT</p> <p>Discussion on what the different ways could be.</p> <p>(operation in brackets first) (multiplication done first)</p> <p>Reasoning, agreement, praising</p> <p>Accept any valid method.</p> <p>T might show:</p> <p>b) <math>-\frac{17}{21} \times \frac{3}{1} = -\frac{17}{7}</math></p> <p>and ask if it is correct.</p> <p><math>= -2\frac{3}{7}</math></p> <p><math>= -2\frac{3}{7}</math></p> <p>T shows how to cancel out the two sixes.</p>

# Y5

R: Mental calculations  
 C: **Multiplication and division of fractions by natural numbers**  
 E: *Noticing and formulating rules*

## Lesson Plan 112

### Activity

1

#### Multiplication and division of fractions

a) Who can show  $\frac{1}{4} \times 3$  on each of these diagrams?

Ps come to BB to colour appropriate number of parts and explain reasoning. Class agrees/disagrees. We can check by writing the multiplication as an addition. Ps dictate what T should write.

$$\text{BB: } \frac{1}{4} + \frac{1}{4} + \frac{1}{4} = \frac{1}{4} \times 3 = \boxed{\frac{3}{4}}$$

b) If this is 1 unit (T points), who can change the diagram to show 5 halves? Who can show  $\frac{5}{2} \times 3$ ?

P comes to BB to amend diagram, with T's help, explaining reasoning. Class agrees or disagrees. Let's write an addition and a multiplication about it. Ps come to BB or dictate what T should write.

$$\text{BB: } \frac{5}{2} + \frac{5}{2} + \frac{5}{2} = \frac{5}{2} \times 3 = \boxed{\frac{15}{2}} (= 7\frac{1}{2})$$

What method have we been using to multiply a fraction by a natural number? Ps explain in own words and T says it more clearly if needed.

- *We multiply the numerator by the natural number and do not change the denominator.*

c) Let's write this addition in a shorter way. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees.

$$\text{BB: } \frac{5}{8} + \frac{5}{8} + \frac{5}{8} + \frac{5}{8} = [ \frac{5}{8} \times 4 = \frac{20}{8} = \boxed{\frac{5}{2}} (= 2\frac{1}{2}) ]$$

Who can show it in this diagram? Ps come to BB to shade each '5 eighths' in a different colour.. T explains the result being a different denominator in another way, referring to the diagram

$$\text{BB: } \frac{1}{2} = 4 \times \frac{1}{8}, \text{ so } \frac{5}{2} = 4 \times \frac{5}{8}$$

What other way have we used to multiply a fraction by a natural number? Ps explain in own words and T repeats more clearly .

- *We divide the denominator by the natural number and do not change the numerator.*

What is necessary before we can use this method? (The denominator must be exactly divisible by the natural number.)

6 min

2

#### PbY5b, page 112

Q.1 Read: *Calculate the products, reducing them to their simplest form where relevant.*

Set a time limit. Encourage Ps to check each multiplication with an addition (mentally or in *Ex. Bks.* or on scrap paper).

Review with whole class. Ps come to BB or dictate to T, explaining reasoning with addition or using one of the 'rules'. Class agrees/disagrees. Mistakes discussed and corrected.

T shows how the denominator and multiplier can be reduced first (by dividing by a common factor) to make the calculation easier instead of simplifying at the end.

### Notes

Whole class activity

Drawn on BB or SB or OHT.

BB:

Ps write calculation in *Ex. Bks.*

BB:

Ps write calculation in *Ex. Bks.*

Agreement, praising

Class repeats in unison.

Reasoning, agreement, praising

Ps write calculation in *Ex. Bks.*

Rectangle already drawn on BB or SB or OHT:

BB:

Class repeats it in unison.

Extra praise if a P thinks of this.

<b>Y5</b>		<i>Lesson Plan 112</i>
<p><b>Activity</b></p> <p>2</p>	<p>(Continued)</p> <p><i>Solution:</i></p> <p>a) <math>\frac{4}{5} \times 2 = \frac{8}{5} = 1\frac{3}{5}</math>    b) <math>\frac{3}{8} \times 4 = \frac{12}{8} = \frac{3}{2} = 1\frac{1}{2}</math>  or <math>\frac{3}{8} \times 4 = \frac{3}{2} = 1\frac{1}{2}</math>  T shows <math>\frac{3}{\cancel{8}_2} \times \cancel{4}^1 = \frac{3}{2} = 1\frac{1}{2}</math></p> <p>c) <math>\frac{3}{4} \times 8 = \frac{24}{4} = 6</math>;    T shows: <math>\frac{3}{\cancel{4}_1} \times \cancel{8}^2 = \frac{6}{1} = 6</math></p> <p>d) <math>\frac{5}{12} \times 8 = \frac{40}{12} = \frac{10}{3} = 3\frac{1}{3}</math>; or T: <math>\frac{5}{\cancel{12}_3} \times \cancel{8}^2 = \frac{10}{3} = 3\frac{1}{3}</math></p> <p>e) <math>\frac{5}{8} \times 12 = \frac{60}{8} = \frac{15}{2} = 7\frac{1}{2}</math>; or T: <math>\frac{5}{\cancel{8}_2} \times \cancel{12}^3 = \frac{15}{2} = 7\frac{1}{2}</math></p> <p>f) <math>\frac{5}{11} \times 0 = 0</math> (As <u>any</u> number multiplied by zero is zero.)</p> <p style="text-align: right;"><i>12 min</i></p>	<p style="text-align: center;"><b>Notes</b></p> <p>Accept any valid method.</p> <p>(Multiplying the numerator by the natural number.)</p> <p>(Dividing the denominator by the natural number)</p> <p>(Dividing the denominator and the natural number by a common factor.)</p> <p>T points out that this last method is used when the denominator is not exactly divisible by the natural number but they have factors in common.</p> <p>Ps say which method they like best.</p>
<p>3</p>	<p><b>Solving equations</b></p> <p>Let's find the numbers which can be written instead of the letters to make the equation is true.</p> <p>Ps come to BB or dictate to T, explaining reasoning by showing that their result is correct by substitution. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) <math>\frac{2}{5} \times \boxed{2} = \frac{4}{5}</math>                      b) <math>\boxed{3} \times \frac{5}{9} = \frac{15}{9} (= \frac{5}{3} = 1\frac{2}{3})</math></p> <p>c) <math>\frac{3}{10} \times \boxed{10} = \frac{30}{10} = 3</math>              d) <math>\frac{5}{8} \times \boxed{2} = \frac{5}{4} (= 1\frac{1}{4})</math></p> <p>e) <math>\frac{\boxed{5}}{6} \times 4 = \frac{10}{3} (= \frac{20}{6} = 3\frac{1}{3})</math>    f) e.g. <math>\frac{5}{\boxed{3}} \times \boxed{6} = 10</math></p> <p style="text-align: right;"><i>22 min</i></p>	<p>Individual work, monitored</p> <p>Written on BB or use enlarged copy master or OHP</p> <p>Reasoning, agreement, self-correction, praising</p> <p>Accept trial and error, but encourage Ps to reason in a mathematical way.</p> <p>In f), many solutions are possible, e.g.</p> <p><math>\frac{5}{2} \times 4</math>, <math>\frac{5}{4} \times 8</math>, <math>\frac{5}{5} \times 10</math>, etc.  (i.e. any natural number as the denominator and twice that number as the multiplier)</p>

## Y5

## Lesson Plan 112

## Activity

5

**PbY5b, page 112**

Q.3 Read: Write each calculation in different ways.

Set a time limit. Ask Ps to write at least 2 different ways.

Review at BB with whole class. A, come and show us one way. Who agrees? Who can show us another way? etc. In a), T shows the calculation using 'cancellation' if no P has shown it and asks Ps if it is correct. Ps write it in *Ex. Bks.* Mistakes discussed and corrected.

*Solution:* e.g.

$$\text{a) } \left(\frac{3}{2} + \frac{1}{3}\right) \times 12 = \frac{9+2}{6} \times 12 = \frac{11}{6} \times 12 = \frac{132}{6} = 22$$

$$\text{or } \left(\frac{3}{2} + \frac{1}{3}\right) \times 12 = \frac{3}{2} \times 12 + \frac{1}{3} \times 12 = \frac{36}{2} + \frac{12}{3} \\ = 18 + 4 = 22$$

$$\text{or } = \frac{3 \times \overset{6}{\cancel{12}}}{\cancel{2}_1} + \frac{1 \times \overset{4}{\cancel{12}}}{\cancel{3}_1} = 18 + 4 = 22$$

$$\text{b) } \left(\frac{4}{5} - \frac{2}{3}\right) \times 4 = \frac{12-10}{15} \times 4 = \frac{2}{15} \times 4 = \frac{8}{15}$$

$$\text{or } \left(\frac{4}{5} - \frac{2}{3}\right) \times 4 = \frac{4}{5} \times 4 - \frac{2}{3} \times 4 = \frac{16}{5} - \frac{8}{3} \\ = \frac{48-40}{15} = \frac{8}{15}$$

26 min.

## Notes

Individual work, monitored, helped

Written on BB or SB or OHT

Discussion, reasoning, agreement, self-correction, praising

Accept and praise any correct method.

Feedback for T

6

**Fraction of a fraction**

This 6 cm strip is 1 unit.

a) What part of the unit is the 2 cm strip? (1 third)

b) What part of the unit is the 3 cm strip? (1 half)

c) What length is half of the 2 cm strip? (1 cm)

What part of the unit is half of the 2 cm strip? BB:  $\frac{1}{2}$  of  $\frac{1}{3} = \frac{1}{6}$

T: We can write it as a division like this: BB:  $\frac{1}{3} \div 2 = \frac{1}{6}$

d) What length is 1 third of the 3 cm strip? (1 cm)

What part of the unit is 1 third of the 3 cm strip? BB:  $\frac{1}{3}$  of  $\frac{1}{2} = \frac{1}{6}$

T: We can write it as a division like this. BB:  $\frac{1}{2} \div 3 = \frac{1}{6}$

e) What part of the unit is 4 cm? (2 thirds)

What length is 1 quarter of 2 thirds? (1 cm)

What fraction of a unit is 1 quarter of 2 thirds? (1 sixth)

Who can write a division about it? BB:  $\frac{2}{3} \div 4 = \frac{1}{6} \left( = \frac{2}{12} \right)$

31 min.

Whole class activity

Strips drawn (stuck) on BB or use Cuisenaire rods or multi-link cubes

Discussion, reasoning, agreement, praising

T chooses Ps at random, or class shouts out in unison.

Ps write divisions in *Ex. Bks.*

T writes:

$$\text{BB: } \frac{2}{3} \div 4 = \frac{4}{6} \div 4 = \frac{1}{6}$$

and asks Ps what they think of it.

# Y5

## Lesson Plan 112

### Activity

7

#### PbY5b, page 112

Q.4 Read: Answer each question by writing a division. Use the diagram to help you.

What can you tell me about the diagram? (The long rectangle is 1 unit; the unit is divided into 12 equal parts, so each small square is 1 twelfth of a unit.)

Set a time limit (or deal with one at a time if Ps are not very able).

Review at BB with whole class. Ps could show results on scrap paper or slates on command. Ps responding correctly explain at BB to those who were wrong. Class agrees or disagrees. Mistakes discussed and corrected.

Solution:

a) What is half of a third? Elicit that 1 third is 4 grid squares.

$$\text{BB: } \frac{1}{2} \text{ of } \frac{1}{3} = \frac{1}{3} \div 2 = \frac{1}{6} \text{ (2 grid squares)}$$

b) What is a third of a quarter? (1 quarter: 3 grid squares)

$$\text{BB: } \frac{1}{3} \text{ of } \frac{1}{4} = \frac{1}{4} \div 3 = \frac{1}{12} \text{ (1 grid square)}$$

c) What is a quarter of a third? (1 third: 4 grid squares)

$$\text{BB: } \frac{1}{4} \text{ of } \frac{1}{3} = \frac{1}{3} \div 4 = \frac{1}{12} \text{ (1 grid square)}$$

d) What is a fifth of 10 twelfths? (10 twelfths: 10 grid squares)

$$\text{BB: } \frac{1}{5} \text{ of } \frac{10}{12} = \frac{10}{12} \div 5 = \frac{2}{12} (= \frac{1}{6}) \text{ (2 grid squares)}$$

e) What is a third of 3 quarters? (3 quarters: 9 grid squares)

$$\text{BB: } \frac{1}{3} \text{ of } \frac{3}{4} = \frac{3}{4} \div 3 = \frac{1}{4} \text{ (3 grid squares)}$$

f) What is a quarter of 16 twelfths? (16 twelfths: 16 grid squares)

$$\text{BB: } \frac{1}{4} \text{ of } \frac{16}{12} = \frac{16}{12} \div 4 = \frac{4}{12} (= \frac{1}{3}) \text{ (4 grid squares)}$$

38 min

### Notes

Individual work, monitored, helped

Strips drawn (stuck) on on BB or use Cuisenaire rods or multilink cubes.

Differentiation by time limit

Discussion, reasoning, agreement, self-correction, praising

Elicit or point out the two different ways in which we can divide a fraction.

1) We divide the numerator by the divisor and leave the denominator unchanged. [as in d) to f)]

2) We multiply the denominator by the divisor and leave the numerator unchanged. [as in a) to c)]

but do not expect Ps to learn them yet.

Extra praise if Ps point out the fractions which can be simplified.

8

#### PbY5b, page 112, Q.5

a) Read: One third of the unit has been divided into 5 equal parts.

Write a division about the part which has been shaded twice.

What part of the unit has been shaded twice? (1 fifteenth, as 1 unit has been divided into 15 equal parts, so each part is 1 fifteenth)

Who can write a division about it? P comes to BB or dictates to T. Class agrees/disagrees. Ps write division in Pbs too.

b) Read: Do the division and show it on the diagram in a).

Ps come to BB to shade 2 thirds on the diagram, colour 1 fifth of the shaded part and complete the division. Class agrees/disagrees.

c) Read: Do the division. Amend the diagram to show it.

Ps come to BB to write the division and explain BB: reasoning by drawing another column and shading.

Who can think of another way to write the division?

T shows it if no P can think of it.

Whole class activity

(or individual trial first if Ps wish)

Diagrams drawn on BB or SB or OHT

$$\frac{1}{3} \div 5 = \frac{1}{15}$$

$$\frac{2}{3} \div 5 = \frac{2}{15}$$

$$\frac{4}{3} \div 2 = \frac{4 \div 2}{3} = \frac{2}{3}, \text{ or}$$

$$\frac{4}{3} \div 2 = \frac{4}{3 \times 2} = \frac{4}{6} = \frac{2}{3}$$

45 min

**Y5***Lesson Plan 113***Activity****6****PbY5b, page 113**

Q.2 Read: *Solve the equations and inequality. Check your solutions.*

What does solve mean? (Work out which numbers the letters represent to make the statement true.)

Set a time limit or deal with one at a time.

Review with the whole class. Ps could show results on scrap paper or slates on command. Ps answering correctly come to BB or dictate to T, explaining reasoning and checking by substitution. Who thought the same? Who worked it out in a different way? etc. Mistakes discussed and corrected.

*Solution:*

$$\text{a) } x \times 4 = \frac{3}{4}; x = \frac{3}{4} \div 4 = \frac{3}{16}; \text{ Check: } \frac{3}{16} \times 4 = \frac{12}{16} = \frac{3}{4} \quad \checkmark$$

(The unknown factor of a product can be calculated by dividing the product by the known factor.)

$$\text{b) } y + 5 \times y = \frac{12}{5}; 6 \times y = \frac{12}{5}, \text{ so } y = \frac{12}{5} \div 6 = \frac{2}{5}$$

$$\text{Check: } \frac{2}{5} + 5 \times \frac{2}{5} = \frac{2}{5} + \frac{10}{5} = \frac{12}{5} \quad \checkmark$$

(Reasoning as for a), or as opposite. Stress that whatever we do to one side of an equation we must also do to the other side to keep the equation true.)

$$\text{c) } 6 \times z - z < \frac{5}{8}; 5 \times z < \frac{5}{8}, \text{ so } z < \frac{5}{8} \div 5; z < \frac{1}{8}$$

*Check:* If we think of the inequality as an equation:

$$\text{BB: } 5 \times z = \frac{5}{8}, z = \frac{1}{8}$$

So five times a number which is less than 1 eighth must be less than 5 eighths.  $\checkmark$

30 min

**Notes**

Individual work, monitored, helped

Written on BB or SB or OHT

Discussion, reasoning, agreement, self-correction, praising

Accept any valid reasoning, including trial and error but also show methods below.

N.B. T should write each line of calculation vertically on BB, with '=' and '<' signs lined up one below the other.

or

If we divide each side of the equation by 6, the equation still remains true.

$$\text{BB: } 6 \times y \div 6 = \frac{12}{5} \div 6 \\ y = \frac{2}{5}$$

or if we divide each side of the inequality by 5, the inequality still remains true.

$$\text{BB: } 5 \times z \div 5 < \frac{5}{8} \div 5 \\ z < \frac{1}{8}$$

**7****PbY5b, page 113**

Q.3 Read: *The 4th, 5th and 6th terms of a sequence are given. Complete the sequence so that the first 10 terms are listed.*

How many terms must you write before (after) the 3 given? (3 before and 4 after, as  $3 + 3 + 4 = 10$ )

Deal with one part at a time or set a time limit.

Review with whole class. Ps come to BB or dictate terms to T, stating the rule they used. Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

$$\text{a) } \left( \frac{1}{6}, \frac{1}{3}, \frac{2}{3}, \frac{4}{3}, \frac{8}{3}, \frac{16}{3}, \left( \frac{32}{3}, \frac{64}{3}, \frac{128}{3}, \frac{256}{3}, \right) \right) [\times 2]$$

$$\text{b) } \left( -\frac{1}{7}, \frac{0}{7}, \frac{1}{7}, \frac{2}{7}, \frac{3}{7}, \frac{4}{7}, \left( \frac{5}{7}, \frac{6}{7}, \frac{7}{7}, \frac{8}{7}, \right) \right) \left[ + \frac{1}{7} \right]$$

$$\text{c) } \left( \cancel{\frac{1}{0}}, \frac{0}{1}, \frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5}, \left( \frac{5}{6}, \frac{6}{7}, \frac{7}{8}, \frac{8}{9}, \right) \right)$$

Individual work, monitored, helped

Given terms written in middle of BB or SB or OHT

Discussion, reasoning, agreement, self-correction, praising

Extra praise if Ps notice that:

$$\bullet \frac{0}{7} = \frac{0}{1} = 0$$

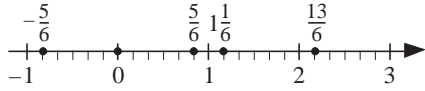

and in c):

• there is no 1st term, as it is impossible to divide a number by zero

• *Rule:* numerators and denominators increasing by 1

•  $0 \leq \text{any term} < 1$

**Y5**

*Lesson Plan 114*

**Activity**

**8**

**PbY5b, page 114**

Q.5 Read: *Solve the problem in your exercise book.*

*A 10 cm cube can hold 1 litre of water. What height would the water level be in the cube if we pour into it:*

- a) *half a litre*    b) *3 quarters of a litre*  
 c) *25 cl*            d) *800 cm<sup>3</sup>?*

If possible T has a 10 cm × 10 cm × 10 cm cube to show to class (ideally glass or plastic and hollow), otherwise draw on BB.

If we filled it with 1 litre of water, how high would the water level be? (It would reach the top, i.e. 10 cm high)

If we poured in only half a litre, which dimension would change? (Agree that the area of the base would be the same, so only the height would change.)

Set a time limit of 2 minutes. Review with whole class.

Ps could show results on scrap paper or slates on command.

Ps answering correctly explain to Ps who were wrong, referring to the cube (or a digram drawn on BB). Class agrees/ disagrees. Mistakes discussed and corrected.

*Solution:*

a) 1 litre → 10 cm high;

$$\frac{1}{2} \text{ a litre} \rightarrow 10 \text{ cm} \div 2 = \underline{5 \text{ cm}} \text{ high}$$

b)  $\frac{3}{4}$  of a litre →  $10 \text{ cm} \div 4 \times 3 = 2.5 \text{ cm} \times 3 = \underline{7.5 \text{ cm}}$

c)  $25 \text{ cl} = \frac{25}{100} \text{ litre} = \frac{1}{4} \text{ litre}$

$$\frac{1}{4} \text{ of a litre} \rightarrow 10 \text{ cm} \div 4 = \underline{2.5 \text{ cm}} \text{ (or } 25 \text{ mm)}$$

c)  $V = 800 \text{ cm}^3 = 10 \text{ cm} \times 10 \text{ cm} \times \underline{8 \text{ cm}}$

Level of water: 8 cm

42 min

**Notes**

Individual work, monitored, helped  
 (or whole class activity if time is short)

Discussion, agreement, (demonstration if time), praising

Reasoning, agreement, self-correction, praising

Accept any valid reasoning and method of calculation.

or  $10 \text{ cm} = 100 \text{ mm}$   
 $100 \text{ mm} \div 4 \times 3$   
 $= 25 \text{ mm} \times 3 = \underline{75 \text{ mm}}$

(as 10 cm × 10 cm is the area of the base and 8 cm is the height of the water)

**9**

**PbY5b, page 114, Q.6**

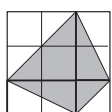

Read: *What part of the whole unit is shaded? Write the fraction in different forms in your exercise book.*

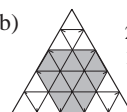

What do you think we should do first to make it easier for ourselves? (Divide the shapes into equal parts using the marks provided)

Elicit that part a) should be divided into equal squares and b) into equal triangles. Ps come to BB to draw grid lines and rest of Ps work in Pbs.

Agree on the number of equal parts and how many are shaded. [In a), 9 equal squares, 4 and a half squares shaded; i.e. half of the unit is shaded]

Tell me the fraction in different forms. Ps dictate to T, explaining what they have done to numerator and denominator. Class points out errors.

*Solution:* a)  1  
 9 equal parts  
 4 and a half parts shaded  
 i.e. 1 half is shaded

b)  25 equal parts  
 13 parts shaded

$$\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{9}{18} \dots \quad \frac{13}{25} = \frac{26}{50} = \frac{39}{75} \dots$$

45 min

Whole class activity  
 (or a 1 minute individual trial first if Ps wish and there is time)

Drawn on BB or use enlarged copy master or OHP

Discussion, reasoning, agreement, praising

At speed round class

Praising, encouragement only

Elicit that such fractions of equal value are called equivalent fractions.

Feedback for T

**Y5****Lesson Plan**

Tables and calculation practice, activities, consolidation

**PbY5b, page 115***Solutions:*

Q.1 a)  $\frac{3}{8} + \frac{7}{20} = \frac{15 + 14}{40} = \frac{29}{40}$

b)  $\frac{4}{7} + \frac{11}{21} = \frac{12 + 11}{21} = \frac{23}{21} = 1\frac{2}{21}$

c)  $\frac{2}{9} + \frac{3}{8} = \frac{16 + 27}{72} = \frac{43}{72}$

d)  $\frac{5}{6} - \frac{1}{3} = \frac{5 - 2}{6} = \frac{3}{6} = \frac{1}{2}$

e)  $\frac{5}{12} - \frac{1}{3} = \frac{5 - 4}{12} = \frac{1}{12}$

f)  $\frac{11}{15} - \frac{3}{5} = \frac{11 - 9}{15} = \frac{2}{15}$

g)  $\frac{3}{4} \times \frac{2}{8} = \frac{6}{1} = 6$

h)  $\frac{2}{15} \times \frac{1}{3} = \frac{2}{3}$

i)  $\frac{7}{8} \times \frac{1}{4} = \frac{7}{2} = 3\frac{1}{2}$

j)  $\frac{5}{9} \div 5 = \frac{5 \div 5}{9} = \frac{1}{9}$

k)  $\frac{4}{7} \div 2 = \frac{4 \div 2}{7} = \frac{2}{7}$

l)  $\frac{3}{8} \div 4 = \frac{3}{8 \times 4} = \frac{3}{32}$

Q.2 a)  $\frac{\text{hexagon}}{7} < \frac{5}{7}$  b)  $\frac{3}{23} < \frac{\text{triangle}}{23} < \frac{8}{23}$  c)  $\frac{9}{5} - \frac{\text{semicircle}}{10} > 1$

hexagon: 4, 3, 2, 1

triangle: 4, 5, 6, 7

$\frac{18}{10} - \frac{\text{semicircle}}{10} > \frac{10}{10}$

semicircle: 1, 2, 3, 4, 5, 6, 7

Q.3 a)  $x \times 3 = \frac{2}{5}$ ,  $x = \frac{2}{5} \div 3 = \frac{2}{5 \times 3} = \frac{2}{15}$

b)  $y + 3 \times y = \frac{20}{3}$ ,  $4 \times y = \frac{20}{3}$ ,  $y = \frac{20}{3} \div 4 = \frac{5}{3} = 1\frac{2}{3}$

c)  $5 \times z - z < \frac{4}{7}$ ,  $4 \times z < \frac{4}{7}$ ,  $z < \frac{1}{7}$

Q.4 a) half of a quarter =  $\frac{1}{4} \div 2 = \frac{1}{8}$

b) a quarter of a half =  $\frac{1}{2} \div 4 = \frac{1}{8}$

c) a quarter of a quarter =  $\frac{1}{4} \div 4 = \frac{1}{16}$

d) a third of 9 sixteenths =  $\frac{9}{16} \div 3 = \frac{3}{16}$

**Y5***Lesson Plan 114***Activity***(Solutions continued)*

Q.5 a) i)  $P = 4 \times a = \frac{3}{4} \text{ m}$

$$a = \frac{3}{4} \text{ m} \div 4 = \frac{3}{16} \text{ m}$$

ii)  $\frac{3}{4} \text{ m} = 75 \text{ cm}, 75 \text{ cm} \div 4 = 18\frac{3}{4} \text{ cm}$

b) i)  $\frac{2}{3} \text{ litre} \div 4 = \frac{2}{12} \text{ litre} = \frac{1}{6} \text{ litre}$

ii)  $\frac{1}{6} \text{ litre} = \frac{1}{6} \text{ of } 100 \text{ cl} = 100 \text{ cl} \div 6 = 16\frac{4}{6} \text{ cl}$   
$$= 16\frac{2}{3} \text{ cl}$$

**Notes**

**Y5**

R: Fractions. Tenths, hundredths  
 C: **Reading and writing decimals. Place value**  
 E: *Comparing decimals*

## Lesson Plan 116

**Activity****1****Revision of decimals**

T has 3 amounts in decimal form written on BB.

What kind of numbers are these? (decimals) Let's read them together. (fourteen point nine nine pounds; two hundred and thirty point four metres; seven point six litres)

What does the decimal point show? (It separates the whole units from the parts of a unit.) Let's think about what the decimal number really means. Ps come to BB to write other forms of the numbers. Class agrees/disagrees.

BB:

$$a) \text{ £}14.99 = \text{£}14 \text{ } 99 \text{ p} = \text{£}\left(14 + \frac{99}{100}\right)$$

$$b) 230.4 \text{ m} = 230 \text{ m } 40 \text{ cm} = \left(230 + \frac{4}{10}\right) \text{ m}$$

$$c) 7.6 \text{ litres} = 7 \text{ litres } 60 \text{ cl} = \left(7 + \frac{6}{10}\right) \text{ litres}$$

T points to certain digits and Ps say its digit value, place value and real value. (e.g. 230.4 m: digit value: 4, place value: 4 t real value:  $\frac{4}{10}$ )

4 min

**Notes**

Whole class activity

Written on BB or SB or OHT

BB: decimals

In unison

Involve several Ps.

Agreement, praising

Feedback for T

**2****Place value 1**

Study this place value table. What does the thick vertical line show? (It separates the whole numbers from the parts and is where the decimal point would be written.)

BB:

Thousands Th	Hundreds H	Tens T	Units U	tenths t	hundredths h	thousandths th
			5	0	3	
				7	2	
		5	0	2	6	
	4	0	0	9		
1	0	0	0	0	5	

Let's write each number in the place value table as an addition, then as a single fraction, then in decimal form. Ps come to BB or dictate to T. Class points out errors. (If Ps write on BB, ask them to say the numbers too. e.g. 5 plus 3 hundredths; 503 hundredths; 5 point zero 3)

BB:

$$a) 5 + \frac{3}{100} = \frac{503}{100} = 5.03 \qquad b) 0 + \frac{72}{100} = \frac{72}{100} = 0.72$$

$$c) 50 + \frac{26}{100} = \frac{5026}{100} = 50.26 \qquad d) 400 + \frac{9}{10} = \frac{4009}{10} = 400.9$$

$$e) 1000 + \frac{5}{100} = \frac{100005}{100} = 1000.05 \quad (\text{'1 hundred thousand and 5 hundredths'})$$

10 min

Drawn on BB or use enlarged copy master or OHP

Involve several Ps.

At a good pace

Agreement, praising

# Y5

## Lesson Plan 116

### Activity

3

#### Place value 2

Let's change these numbers to decimals first, then write them in the place-value table. Ps come to BB to convert numbers to decimals and write digits in appropriate column in table, explaining reasoning. Class points out errors.

BB:

a)  $\frac{4}{10}$  [= 0.4]      b)  $\frac{5}{100}$  [= 0.05]

c)  $47 + \frac{3}{100}$  [= 47.03]      d) 17.92

e)  $5 + \frac{7}{100}$  [= 5.07]

f)  $\frac{450}{100}$  [=  $4 + \frac{50}{100} = 4.50$ ]

	Th	H	T	U	t	h	th
a)				0	4		
b)				0	0	5	
c)			4	7	0	3	
d)			1	7	9	2	
e)				5	0	7	
f)				4	5	0	

What is the place value of the digit 4 (7, 5) in the different numbers?  
Ps come to BB to point them out and say the place value. Class agrees/disagrees.

15 min

### Notes

Whole class activity

Numbers written on BB.

Table drawn on BB or use enlarged copy master or OHP

At a good pace

Feedback for T

4

#### Number line 1

What can you tell me about this segment of the number line? (Ranges from -2 to 2.4 or 2 and 4 tenths; there is a tick at every tenth)

BB:

Let's change all these numbers to decimals and mark them on the number line.

BB: 0.7, 1.3,  $\frac{15}{10}$ , -1.2,  $-\frac{8}{10}$ ,  $\frac{21}{10}$ ,  $1 + \frac{7}{10}$   
1.5, -0.8, 2.1, 1.7

Ps come to BB to choose a number, convert to a decimal if necessary and mark and label it on the number line. Class agrees/disagrees.

BB:

20 min

Whole class activity

Number line drawn on BB or use enlarged copy master or OHP

At a good pace

Reasoning, agreement, praising

T could also ask Ps to show the positive numbers by colouring a 10 cm by 10 cm grid (use copy master from LP111/1)

5

#### Number line 2

What can you tell me about this segment of the number line? (ranges from -0.3 to 0.5; the ticks show hundredths)

Let's read and write the numbers marked. Ps come to BB to choose a dot, say the number and write it as a decimal. Class agrees/disagrees. What is the number as a fraction?

BB:

25 min

Whole class activity

Drawn on BB or use enlarged copy master or OHP

At a good pace

Reasoning, agreement, praising

(Ps could also colour the positive numbers on a 10 cm by 10 cm grid.)

**Y5**

*Lesson Plan 116*

**Activity**

**6**

**PbY5b, page 116**

Q.1 Read: *Join the numbers to the corresponding points on the number line.*

Set a time limit. Review with whole class. Ps come to BB to draw dots and joining lines, explaining reasoning (and saying the decimals as fractions and the fractions as decimals). Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

Let's say the numbers as:

- a) decimals in increasing order,
- b) fractions in decreasing order.

29 min

**Notes**

Individual work, monitored, helped  
 Drawn on BB or use enlarged copy master or OHP  
 Differentiation by time limit  
 Discussion, reasoning, agreement, self-correction, praising

Elicit that:

$$-0.60 = -0.6$$

$$\frac{80}{100} = \frac{8}{10} = 0.80 = 0.8$$

$$1 + \frac{9}{10} = 1\frac{9}{10} = \frac{19}{10} = 1.9$$

**7**

**PbY5b, page 116**

Q.2 Read: *List the marked numbers in order if:*

- a)  $x = 10$ , b)  $x = 1$ , c)  $x = 0.1$

Set a time limit or deal with one at a time.

Review at BB with whole class. P says what each tick on the number line represents. T points to each dot in turn and a P says the number. Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

- a)  $x = 10$ :  $-12 < -10 < -3 < 2 < 5 < 13$
- b)  $x = 1$ :  $-1.2 < -1 < -0.3 < 0.2 < 0.5 < 1.3$
- c)  $x = 0.1$ :  $-0.12 < -0.1 < -0.03 < 0.02 < 0.05 < 0.13$

33 min

Individual work, monitored, helped  
 Drawn on BB or use enlarged copy master or OHP  
 Discussion, reasoning, agreement, self-correction, praising

- (a tick at every '1')
- (a tick at every 'tenth')
- (a tick at every 'hundredth')

**8**

**PbY5b, page 116**

Q.3 Read: *List the fractions as decimals in increasing order. Write < or = signs between them.*

What is the easiest way to compare them? (Change the tenths to hundredths first.) Set a time limit.

Review with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected. Show in a place-value table or on a number line drawn on BB if problems or disagreement.

*Solution:*

$$\frac{3}{10}, \frac{1}{100}, \frac{27}{100}, \frac{30}{100}, \frac{84}{100}, \frac{70}{100}, \frac{16}{10}, \frac{160}{100}, \frac{7}{10}$$

$$\frac{30}{100}, \frac{160}{100}, \frac{70}{100}$$

$$0.01 < 0.27 < 0.3 = 0.30 < 0.70 = 0.7 < 0.84 < 1.6 = 1.60$$

 E: *Quantities*

## Lesson Plan 117

**Activity****1****Exact measures**

- a) A line segment is exactly 15 cm long. Tell me different ways to write its length. Ps dictate to T. Class points out errors.

BB: e.g. 15 cm = 150 mm = 15.0 cm = 0.15 m = 0.150 m

$$\text{or } = \frac{15}{100} \text{ m} = \frac{150}{1000} \text{ m, etc.}$$

- b) If a stick is exactly 15 cm 2 mm long, in which different ways could we write its length? Ps dictate to T. Class points out errors

BB: e.g. 15 cm 2 mm = 152 mm = 15.2 cm = 0.152 m

$$\text{or } = 15 \frac{2}{10} \text{ cm} = \frac{152}{1000} \text{ m, etc.}$$

- c) We have two sticks, one is 1.6 m long and the other is 1.49 m long. Which is longer? Let's compare them in different ways. T starts each comparison and Ps continue it.

BB: e.g.

$$1.6 \text{ m} = 1 \text{ m } 60 \text{ cm} = 160 \text{ cm} > 1.49 \text{ m} = 1 \text{ m } 49 \text{ cm} = 149 \text{ cm}$$

$$1.6 = \frac{16}{10} = \frac{160}{100} > 1.49 = \frac{149}{100}$$

$$1.6 = 1.60 > 1.49$$

Elicit that  $1.6 = 1.60 = 1.600 = 1.6000 \dots$  (i.e. any number of zeros can be written after the decimal point but the value doesn't change.

5 min

**Notes**

Whole class activity

Involve as many Ps as possible.

If Ps cannot think of many, T makes suggestions and asks Ps if they are correct.

Agreement, praising

Ps could write the different forms in *Ex. Bks.*

Feedback for T

Discussion, agreement, praising

**2****Rounding 1**

- a) Measure the width of your Practice Book. T asks 3 or 4 Ps for their measurements and writes them on BB. e.g.

BB: 208 mm, 20 cm 9 mm, 21 cm, 211 mm, etc.

T: I measured it as 20 cm 9 mm but I am not sure that it is exact.

What I can say is that the width is 20 cm 9 mm, to the nearest mm.

If I call the width  $w$ , I can write it mathematically like this.

BB: 20 cm 8.5 mm  $\leq w < 20$  cm 9.5 mm

or in cm: 20.85 cm  $\leq w < 20.95$  cm

Let's show it on the number line. Ps dictate what T should draw and write. If necessary, remind Ps about the notation for showing inequalities on the number line. [A closed (*black*) circle means the number is included; an open (*white*) circle means the number is not included; horizontal line joining the circles covers all the possible numbers.]

- b) The length of a stick was measured as approximately 1.6 m.

What does it really mean? Ps come to BB or dictate what T should write. Class agrees/disagrees.

BB: 1.55 m  $\leq$  length  $< 1.65$  m or 155 cm  $\leq$  length  $< 165$  cm

- c) Another person measured the same stick and gave its measurement as approximately 1.60 m. What did they really mean? Ps come to BB or dictate to T. Class agrees/disagrees.

BB: 1.595 m  $\leq$  length  $< 1.605$  m or 159.5 cm  $\leq$  length  $< 160.5$  cm

Agree that 1.60 m is a more exact measurement than 1.6 m.

10 min

Whole class activity

Ps use rulers.

(If first 4 Ps all had the same, T asks who had different measurements.)

T explains and Ps listen.

BB:

Discussion, reasoning, agreement, praising

BB: 1.55 m 1.65 m

BB: 1.595 m 1.605 m

<b>Y5</b>		<i>Lesson Plan 117</i>
<p><b>Activity</b></p> <p><b>3</b></p>	<p><b>Rounding 2</b></p> <p>a) T has numbers written on BB: BB: 6318, 6518, 6358, 6315 Let's round each number to the nearest 10, 100 and 1000. Ps come to BB to write approximations, explaining reasoning. Class agrees/disagrees. BB: 6318 <math>\approx</math> 6320 <math>\approx</math> 6300 <math>\approx</math> 6000 6518 <math>\approx</math> 6520 <math>\approx</math> 6500 <math>\approx</math> 7000 6358 <math>\approx</math> 6360 <math>\approx</math> 6400 <math>\approx</math> 6000 6315 <math>\approx</math> 6320 <math>\approx</math> 6300 <math>\approx</math> 6000</p> <p>b) Let's round these quantities to the nearest 10 units and convert them to larger units of measure. Deal with one at a time. T writes quantity on BB and Ps come to BB or dictate what T should write. Class agrees/disagrees. BB: e.g. i) 438 cm <math>\approx</math> 440 cm = 4.4 m ii) 3846 mm <math>\approx</math> 3850 mm = 385 cm = 3.85 m iii) 2641 g <math>\approx</math> 2640 g = 2.64 kg iv) 555 g <math>\approx</math> 560 g = 0.56 kg v) 835 m <math>\approx</math> 840 m = 0.84 km, etc.</p> <p style="text-align: right;"><i>15 min</i></p>	<p><b>Notes</b></p> <p>Whole class activity Revise rounding if necessary: to nearest 10: 5 rounds <u>up</u> to nearest 100: 50 rounds <u>up</u> to nearest 1000: 500 rounds <u>up</u> Reasoning: e.g. <u>6318</u> '18 is nearer 20 than 10' '318 is nearer 300 than 400', '6318 is nearer 6000 than 7000', etc. Agreement, praising</p> <p>At a good pace Reasoning, agreement, praising Ps write approximations in <i>Ex. R: Mental calculation  
 C: **Addition and subtraction of decimals**  
 E: Pencil and paper calculation

## Lesson Plan 118

### Activity

1

#### Puzzle

Let's solve this puzzle and find the word in the thick vertical box which will make us better at mathematics!

T reads out the clues across in numerical order and Ps suggests words to try. Ask Ps for examples (or further examples) as each clue is found.

- (1) An example is  $\frac{4}{7}$ . (fraction)
- (2) The upper number in a fraction. (numerator)
- (3) The lower number in a fraction. (denominator)
- (4) This is what we do when we multiply the upper and lower numbers in a fraction by the same number. (expand)
- (5) This what we do when we divide the upper and lower numbers in a fraction by the same number. (simplify)
- (6) The next place-value smaller than units. (tenths)
- (7) An adjective which describes fractions with the same value. (equivalent)

What should we do to make us better at mathematics? (practise!)

We did not have a clue for row 8. Who can think of one?

5 min

### Notes

Whole class activity

Drawn on BB or use enlarged copy master or OHP

Ps could have copies on desks too.

Involve as many Ps as possible.

Agreement, praising

BB:

				<sup>8</sup> p							
<sup>2</sup> n	u	m	e	r	a	t	o	r			
	<sup>4</sup> e	x	p	a	n	d					
		<sup>1</sup> f	r	a	c	t	i	o	n		
				<sup>6</sup> t	e	n	t	h	s		
	<sup>3</sup> d	e	n	o	m	i	n	a	t	o	r
				<sup>5</sup> s	i	m	p	l	i	f	y
<sup>7</sup> e	q	u	i	v	a	i	e	n	t		

T helps with the spelling where needed.

Class shouts out in unison.

(e.g. plan, perimeter, polygon, probability, prime, etc.)

2

#### Addition of decimals 1

Let's add these fractions, then write the addition with decimals and fill in the place-value table. Ps come to BB to write additions and fill in the table. Class points out errors.

BB:

$$\frac{3}{10} + \frac{57}{100} + \frac{40}{100} = \frac{30 + 57 + 40}{100} = \frac{127}{100} = 1 + \frac{27}{100}$$

$$0.3 + 0.57 + 0.40 = 1.27$$

U	t	h
	3	
	5	7
	4	0
1	2	7

10 min

Whole class activity

Table drawn on BB or SB or OHT

At a good pace

Reasoning, agreement, praising

Repeat with other fractions which have denominators of 10 and 100, suggested by Ps.

3

#### Problem

Listen carefully to this problem and tell me the operation you would use to solve it.

*We need four lengths of cord to tie up some parcels. The lengths we need are 2 m 75 cm, 380 cm, 405 cm and 3 m 66 cm.*

*What length of cord do we need altogether?*

What operation would you use? (addition)

Let's write the lengths in this table, then add them up.

BB:

Ps come to BB or dictate what T should write.

Elicit that, e.g. 16 cm = 1 × 10 cm + 6 cm, etc.

10 m	1 m	10 cm	1 cm
	2	7	5
	3	8	(0)
	4	0	5
	3	6	6
	<sup>1</sup> 2	<sup>2</sup> 1	<sup>0</sup> 6
<sup>1</sup> 1	4	2	6

If we change all the lengths to cm, we can add up in the normal way like this.

Ps come to BB or dictate what T should write.

In cm:

Th	H	T	U
	2	7	5
	3	8	0
	4	0	5
	3	6	6
1	4	2	6

+      →      
$$\begin{array}{r} 275 \\ 380 \\ 405 \\ +366 \\ \hline 1426 \text{ (cm)} \\ 21 \end{array}$$

Whole class activity

Tables drawn on BB or use enlarged copy master or OHP

T repeats slowly to give Ps time to note the data in Ex. Bks.

BB: 2 m 75 cm + 380 cm + 405 cm + 3 m 66 cm = ?

Reasoning, with T's help if necessary, agreement, praising

Place-value table completed first, then vertical addition written as normal.

Ps write the addition in Ex. Bks.

# Y5

## Lesson Plan 118

### Activity

3

(Continued)

If we choose **1 m** as the unit, then our table looks like this.

Ps come to BB or dictate to T.

If we use this table, we can write the addition with decimals.

Ps dictate what T should write.

If we use 1 m as the unit, we could also write an addition with fractions like this. T starts calculation and Ps continue when they understand.

BB:

2	7	5	
3	8	0	
4	0	5	
+	3	6	6
1	4	2	6

 $= 2 + \frac{7}{10} + \frac{5}{100} = 2 + \frac{75}{100}$   
 $= 3 + \frac{8}{10} + \frac{0}{100} = 3 + \frac{80}{100}$   
 $= 4 + \frac{0}{10} + \frac{5}{100} = 4 + \frac{5}{100}$   
 $+ 3 + \frac{6}{10} + \frac{6}{100} = 3 + \frac{66}{100}$   
 $14 + \frac{226}{100} = 14 + \frac{26}{100} \text{ (m)}$

In m:

BB:

T	U	t	h
2	7	5	
3	8		
4	0	5	
+	3	6	6
1	4	2	6

$$\begin{array}{r} 2.75 \\ 3.80 \\ 4.05 \\ +3.66 \\ \hline 14.26 \text{ (m)} \\ \underline{\phantom{14.26} 2.1} \end{array}$$

Agree that: BB:  $14 + \frac{26}{100} \text{ m} = 14.26 \text{ m} = 1426 \text{ cm}$

Answer: The total length of cord needed is 14.26 m.

20 min

### Notes

Reasoning with place-value detail, agreement, praising

Ps write addition with decimals in *Ex. Bks.*

Reasoning, agreement, praising

Ps write addition in *Ex. Bks.*

Which method do you like best? Why?

T chooses a P to say the answer in a sentence.

4

### PbY5b, page 118

Q.1 Read: *We had 30 m 58 cm of parcel tape and used 14 m 26 cm. How much parcel tape do we have left? Write the subtraction in the tables.*

Elicit that 30 m 58 cm = 3058 cm and 14 m 26 cm = 1426 cm.

Set a time limit. (If majority of Ps are struggling, stop individual work and continue as a whole class activity.)

Review with whole class. Ps come to BB to complete tables, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

10 m	1 m	10 cm	1 cm	
3	0	5	8	
-	1	4	2	6
1	6	3	2	

Let's write subtractions in cm and in metres.

In cm:

Th	H	T	U	
3	0	5	8	
-	1	4	2	6
1	6	3	2	

$$\begin{array}{r} 3058 \\ -1426 \\ \hline 1632 \text{ (cm)} \end{array}$$

In m:

T	U	t	h	
3	0	5	8	
-	1	4	2	6
1	6	3	2	

$$\begin{array}{r} 30.58 \\ -14.26 \\ \hline 16.32 \text{ (m)} \end{array}$$

25 min

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

Discussion, reasoning, agreement, self-correction, praising

Ps come to BB or dictate what T should write.

Rest of Ps write in *Ex. Bks.*

# Y5

## Lesson Plan 118

### Activity

5

*PbY5b, page 118*

Q.2 Read: Write each decimal as the sum of units, tenths and hundredths, then do the subtraction in decimal form and fractional form.

Deal with one step at a time or set a time limit. (Ps might find it easier to do the addition with fractions first.)

Review with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

$$\begin{array}{r}
 20.48 \\
 - 14.16 \\
 \hline
 6.32
 \end{array}
 = 20 + \frac{4}{10} + \frac{8}{100} = 20 + \frac{48}{100}$$

$$\begin{array}{r}
 14.16 \\
 = 14 + \frac{1}{10} + \frac{6}{100} = 14 + \frac{16}{100}
 \end{array}$$

$$\begin{array}{r}
 6.32 \\
 = 6 + \frac{32}{100}
 \end{array}$$

29 min

### Notes

Individual work, monitored, helped

Written on BB or use enlarged copy master or OHP

Reasoning, agreement, self-correction, praising

Feedback for T

6

*PbY5b, page 118*

Q.3 Read: Do the subtractions, then check them with additions.

Deal with one at a time. Set a time limit. Ps fill in place-value table first, then do decimal subtraction, then check with a decimal addition. (If majority of Ps have difficulties, stop individual work and continue as a whole class activity.)

Review at BB with whole class. Ps come to BB to complete table and subtraction and write an addition, explaining reasoning with place-value detail. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

a)

T	U	t	h
2	<sup>10</sup> 2	8	3
1	3	0	0
	9	8	3

←

2	2	8	3
-	1	3	0
	9	8	3

←

Check:

	9	8	3
+	1	3	0
	2	2	8
			3

✓

b)

T	U	t	h
2	<sup>10</sup> 2	<sup>10</sup> 0	<sup>10</sup> 0
1	8	4	3
	3	5	7

←

2	2	0	0
-	1	8	4
	3	5	7

←

Check:

	3	5	7
+	1	8	4
	2	2	0
			0

✓

33 min

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

Reasoning, agreement, self-correction, praising

How else could we have checked the subtraction?  
(Subtract the difference from the reductant to give the subtrahend.)

Feedback for T

# Y5

## Lesson Plan 118

### Activity

7

**PbY5b, page 118**

Q.4 Read: *Estimate the result here by rounding each decimal to the nearest whole number; then do the calculation accurately in your exercise book.*

Ps round all the numbers first in *Pbs*, then review.

Ps dictate rounding to T, explaining reasoning. Ps correct any mistakes before they do the calculations.

Set a time limit for the calculations. Ps could write place-value labels above each column to help them.

Review with whole class. Ps come to BB to write calculations and explain reasoning with place-value detail. Mistakes discussed and corrected.

*Solution:*

a)  $2.24 + 21.56 + 0.75 \approx 2 + 22 + 1 = 25$

$$\begin{array}{r} 2.24 \\ 21.56 \\ + 0.75 \\ \hline 24.55 \\ \hline 1 \quad 1 \end{array}$$

b)  $31 + 3.1 + 0.31 + 0.031 \approx 31 + 3 + 0 + 0 = 34$

$$\begin{array}{r} 31 \\ 3.1 \\ 0.31 \\ + 0.031 \\ \hline 34.441 \end{array}$$

c)  $26.68 - 19.35 \approx 27 - 19 = 8$

$$\begin{array}{r} \overset{10}{\phantom{0}} \\ \boxed{26.68} \\ - \boxed{19.35} \\ \hline \boxed{7.33} \end{array}$$

d)  $37.5 - 8.37 \approx 38 - 8 = 30$

$$\begin{array}{r} \overset{10}{\phantom{0}} \quad \overset{10}{\phantom{0}} \\ \boxed{37.5} \\ - \boxed{8.37} \\ \hline \boxed{29.13} \end{array}$$

40 min

### Notes

Individual work, monitored, helped  
Written on BB or SB or OHT

Reasoning: e.g.  
'2.24 is approximately equal to 2, as 2 and 24 hundredths is nearer 2 than 3')

Agreement, self-correction, praising

Feedback for T

8

**PbY5b, page 118, Q.5**

Read: *Solve the problem in your exercise book.*

*Dad bought a water melon which weighed 6.5 kg.*

*At lunch, Mum ate 500 g, Irene ate 3 quarters of a kg, Steve ate 1.2 kg and Dad ate 1.5 kg.*

*How much was left for dinner?*

**X**, how would you solve it. Who would do the same? Who would do it a different way? etc. Accept any correct method of solution. Ps come to BB to write a plan, estimate the result and do the calculations, with T's help where necessary. Class agrees/disagrees.

*Solution:* e.g.

*Data:* mass of melon: 6.5 kg M: 500 g, I:  $\frac{3}{4}$  kg, S: 1.2 kg, D: 1.5 kg

*Plan:*  $6.5 \text{ kg} - (0.5 + 0.75 + 1.2 + 1.5) \text{ kg}$

*E:*  $7 - (1 + 1 + 1 + 2) = 7 - 5 = 2 \text{ (kg)}$

*Check:*  $2.55 + 0.5 + 0.75 + 1.2 + 1.5 = 6.5 \text{ (kg)}$  ✓

$$\begin{array}{r} C: \\ 0.5 \\ 0.75 \\ + 1.2 \\ \hline 3.95 \\ \hline 1 \end{array} \quad \begin{array}{r} 6.5 \\ - 3.95 \\ \hline 2.55 \end{array} \text{ (kg)}$$

T chooses a P to say the answer in a sentence.

*Answer:* There was 2.55 kg of melon left for dinner.

45 min

Whole class activity  
(or individual trial first if Ps wish and there is time, with Ps showing results on scrap paper or slates on command)

Discussion, reasoning, agreement, (self-correction), praising

or in grams:  
 $6500 - (500 + 750 + 1200 + 1500)$

$$\begin{array}{r} C: \\ 500 \\ 750 \\ 1200 \\ + 1500 \\ \hline 3950 \text{ (g)} \end{array} \quad \begin{array}{r} 6500 \\ - 3950 \\ \hline 2550 \text{ (g)} \end{array}$$

Using fractions of a kg is also possible but is rather difficult!

<h1>Y5</h1>	<p>R: (Mental) calculations                  C: <b>Addition and subtraction of decimals</b>                  E: <i>Problems</i></p>	<h2 style="text-align: center;">Lesson Plan 119</h2>

Class agrees/disagrees.</p> <p>BB:                      <i>Mistake:</i>                      <i>Correction:</i></p> <p>a) <math display="block">\begin{array}{r} 4.5\ 6 \\ 3\ 0\ 0 \\ +\ 3\ 2 \\ \hline 7.8\ 8\ \times \end{array} \quad \rightarrow \quad \begin{array}{r} 4.5\ 6 \\ 300 \\ +\ 32 \\ \hline 336.56 \end{array}</math>  <i>E:</i> 5 + 300 + 32 = 337</p> <p>b) <math display="block">\begin{array}{r} 2.3\ 7 \\ 8\ 4.5 \\ +\ 3\ 2\ 1 \\ \hline 14.0\ 3\ \times \end{array} \quad \rightarrow \quad \begin{array}{r} 2.3\ 7 \\ 8\ 4.5 \\ +\ 321 \\ \hline 407.87 \end{array}</math>  <i>E:</i> 2 + 84 + 321 = 407</p> <p>c) <math display="block">\begin{array}{r} 4.6\ 7 \\ -\ 6.0\ 4 \\ \hline 2.6\ 5\ \times \end{array} \quad \rightarrow \quad \begin{array}{r} 4.6\ 7 \\ -\ 6.0\ 4 \\ \hline 1.3\ 7 \end{array} \quad \begin{array}{r} 10\ 10 \\ 6.0\ 4 \\ +\ 4.6\ 7 \\ \hline 1.3\ 7 \\ 1\ 1 \end{array} \quad \begin{array}{r} 1.3\ 7 \\ +\ 4.6\ 7 \\ \hline 6.0\ 4 \\ 1\ 1 \end{array}</math>  <i>E:</i> 5 - 6 = -1                      4.67 - 6.04 = -1.37</p> <p style="text-align: right;">18 min</p>	<p>Whole class activity                  Written on BB or SB or OHT                  Discussion, reasoning, agreement, correcting, praising</p> <p>Elicit that when doing vertical calculation with decimals, we must write the digits with the same place-value one below the other:</p> <ul style="list-style-type: none"> <li>• units below units,</li> <li>• decimal point below decimal point,</li> <li>• tenths below tenths,</li> <li>• hundredths below hundredths,</li> </ul> <p>etc.</p>																				

# Y5

## Lesson Plan 119

### Activity

4

#### Number line

T has car model drawn (stuck) on BB. If possible, Ps have smaller version on desks. Let's play the car game.

Revise the 'rules' first.

- When the car faces the house it means a positive number is added or subtracted.
- When the car faces the tree it means a negative number is added or subtracted.
- When the car moves forward we have to add.
- When the car reverses we have to subtract.

T describes how the car moves and Ps come to BB to show it, then write an operation about it. Class agrees/disagrees. Ps write operation in Ex. Bks. too.

BB:

- a) i) The car is at  $-0.8$  and faces the house. It moves forward  $1.4$  units.  
 BB:  $-0.8 + (+1.4) = +0.6$  or  $-0.8 + 1.4 = 0.6$
- ii) The little car is at  $1.6$  and faces the house. It reverses  $2.1$  units.  
 BB:  $+1.6 - (+2.1) = -0.5$  or  $1.6 - 2.1 = -0.5$
- b) T writes additions or subtractions on BB and Ps come to BB to show the motion of the car, describe it in words and say the result.  
 e.g.  $-0.2 + (-0.7)$ ,  $0.9 + 1.1$ ,  $-1.4 - (-0.5)$ ,  $0.3 - (-0.2)$ , etc.

24 min

### Notes

Whole class activity  
 (but individual manipulation if Ps have smaller version of model on desks)

Use enlarged copy master or OHP and toy car, or use copy master from Y5 LP 54/6vi

Discussion on the rules

Reasoning agreement, praising

Elicit that positive signs can be omitted, as any number without a sign is a positive number.

e.g.  $-0.2 + (-0.7) = -0.9$   
 'The car is at  $-0.2$  and faces the tree. It moves forward  $0.7$  units.'

5

#### PbY5b, page 119

Q.1 Read: *Estimate first by rounding to the nearest tenth, then do the calculations accurately.*

Ps round all the numbers first, then review and correct any mistakes before doing the calculations.

Set a time limit for calculations. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

Solution:

- a)  $4.12 + 29.35 + 0.87$       b)  $7.05 + 27.6 + 6.715 + 37.17$   
 $\approx 4.1 + 29.4 + 0.9 = 34.4$        $\approx 7.1 + 27.6 + 6.7 + 37.2 = 78.6$

$$\begin{array}{r} 4.12 \\ + 29.35 \\ + 0.87 \\ \hline 34.34 \\ \small 1 \quad 1 \quad 1 \end{array}$$

$$\begin{array}{r} 7.05 \\ + 27.6 \\ + 6.715 \\ + 37.11 \\ \hline 78.475 \\ \small 2 \quad 1 \end{array}$$

- c)  $34.67 - 25.58$       d)  $85.49 - 16$   
 $\approx 34.7 - 25.6 = 9.1$        $\approx 85.5 - 16 = 69.5$

$$\begin{array}{r} 34.67 \\ - 25.58 \\ \hline 9.09 \\ \small 10 \quad 10 \end{array}$$

$$\begin{array}{r} 85.49 \\ - 16 \\ \hline 69.49 \\ \small 10 \end{array}$$

30 min

Individual work, monitored, helped

Written on BB or use enlarged copy master or OHP

Discussion, reasoning, agreement, checking, self-correction, praising

Check by comparing with estimate and by adding in opposite direction for addition, or using reverse addition for subtraction.

Feedback for T

<h1>Y5</h1>	<p>R: (Mental) calculation</p> <p>C: <b>Problems in context. Measures with decimals. Reading scales</b></p> <p>E: <i>Accuracy of measurement</i></p>	<h2>Lesson Plan 121</h2>
<b>Activity</b>  <b>1</b>	<p><b>Time</b></p> <p>What do these units measure? (time) Let's fill in the missing numbers. Ps come to BB to write numbers, explaining reasoning. Class points out errors. Ask Ps to say the decimal answers as fractions too.</p> <p>BB:</p> <p>a) 1 hour = <input type="text" value="60"/> min                      b) 0.1 of an hour = <input type="text" value="6"/> min</p> <p>c) 0.2 of an hour = <input type="text" value="12"/> min                      d) 0.9 of an hour = <input type="text" value="54"/> min</p> <p>e) 1.3 hours = <input type="text" value="78"/> min                      f) 2.5 hours = <input type="text" value="150"/> min</p> <p>g) 6 min = <input type="text" value="0.1"/> of an hour                      h) 18 min = <input type="text" value="0.3"/> of an hour</p> <p>i) 90 min = <input type="text" value="1.5"/> hours                      j) 3 min = <input type="text" value="0.05"/> of an hour</p> <p>k) 9 min = <input type="text" value="0.15"/> of an hour                      l) 45 min = <input type="text" value="0.75"/> of an hour</p> <p style="padding-left: 100px;">( = <math>\frac{15}{100}</math> h = <math>\frac{3}{20}</math> h)    ( = <math>\frac{75}{100}</math> h = <math>\frac{3}{4}</math> h)</p> <p style="text-align: right; margin-right: 50px;"><i>5 min</i></p>	<p style="text-align: center;"><b>Notes</b></p> <p>Whole class activity</p> <p>Written on BB or SB or use enlarged copy master or OHP</p> <p>Reasoning, agreement, praising</p> <p>Encourage Ps to look for relationships to make the calculations easier. e.g.</p> <p>0.1 of an hour = <math>\frac{1}{10}</math> of 60 min = <u>6 min</u></p> <p>0.9 of an hour = 6 min <math>\times</math> 9 = <u>54 min</u></p> <p>6 min = <u>0.1</u> of an hour</p> <p>3 min = 0.1 <math>\div</math> 2 = <u>0.05</u> (h)</p> <p>9 min = 0.05 <math>\times</math> 3 = <u>0.15</u> (h)</p>
<b>2</b>	<p><b>Problem</b></p> <p>Listen carefully, note the data in your <i>Ex. Bks</i> and think about how you would work out the answer.</p> <p><i>I worked in the garden for 2.4 hours then I sat on the grass to rest for 15 minutes. After that I continued working for another 1.8 hours,</i></p> <p>a) <i>For how many hours did I rest?</i></p> <p>Who thinks they know what to do? Come and show us. Who agrees? Who can think of another way to do it? T helps where necessary.</p> <p>BB: e.g. 15 min = <math>\frac{15}{60}</math> h = <math>\frac{5}{20}</math> h = <math>\frac{1}{4}</math> h (= <math>\frac{25}{100}</math> h = 0.25 h)</p> <p style="padding-left: 40px;"><u>or</u>            6 min = 0.1 of an hour</p> <p style="padding-left: 60px;">3 min = 0.1 <math>\div</math> 2 = 0.05 (h)</p> <p style="padding-left: 60px;">15 min = 0.05 <math>\times</math> 3 = <u>0.25 (h)</u></p> <p><i>Answer:</i> I rested for a quarter (or 0.25) of an hour.</p> <p>b) <i>For how many minutes did I work in the garden?</i></p> <p>BB: e.g. 2.4 h + 1.8 h = 4.2 h = 4 <math>\times</math> 60 min + <math>\frac{2}{10}</math> of 60 min = 240 min + 12 min = <u>252 min</u></p> <p style="padding-left: 40px;"><u>or</u>    2.4 h + 1.8 h = (120 + 24) min + (60 + 48) min = 144 min + 108 min = <u>252 min</u></p> <p><i>Answer:</i> I worked for 252 minutes in the garden.</p> <p>c) <i>How much time did I spend in the garden altogether?</i></p> <p>BB: (2.4 h + 1.8 h) + 15 min = 252 min + 15 min = 267 min = <u>4 hours 27 minutes</u></p> <p><i>Answer:</i> I spent 4 hours 27 minutes in the garden altogether.</p> <p>Discuss how time is usually expressed. (Not normally as decimals.)</p> <p style="text-align: right; margin-right: 50px;"><i>13 min</i></p>	<p>Whole class activity</p> <p>T repeats slowly to give Ps time to think.</p> <p>(Or at each part, Ps who have an answer show it on scrap paper or slates in unison.</p> <p>Ps with correct answers explain reasoning at BB.)</p> <p>Discussion, reasoning, agreement, praising</p> <p>T chooses a P to say the answer in a sentence.</p> <p> </p> <p><u>or</u></p> <p>0.1 of an hour = 6 min, so</p> <p>0.2 of an hour = 12 min</p> <p>as 0.4 of an hour = 24 min,</p> <p style="padding-left: 60px;">0.8 of an hour = 48 min</p> <p> </p> <p>Extra praise if Ps notice that they can use the answer in b). Would we normally be so accurate in real life? (No, we would say that we had spent about 4 and a half hours in the garden.)</p>

<b>Y5</b>		<i>Lesson Plan 121</i>
<p><b>Activity</b></p> <p><b>3</b></p>	<p><b>Measurements</b></p> <p>T chooses Ps to measure certain things with the appropriate measuring tools. Ps write measures on BB.</p> <p>After each type of measurement, class discusses how accurate the tools can be and how accurate the written measures are.</p> <p>a) T (Ps) uses a stop-watch to time Ps running to touch the BB and back to their seats. BB: e.g. 22 seconds (to the nearest second)</p> <p>b) Ps weigh objects (e.g. book, pencil, ball) on scales in grams. BB: e.g. Book: 232 g (to nearest g) <math>\approx</math> 230 g (to nearest 10 g)</p> <p>c) Ps measure length or width or height of objects with ruler or ruler and compasses. BB: e.g. thickness of a book: 2.38 cm <math>\approx</math> 2.4 cm = 24 mm</p> <p>d) Ps measure angles with a protractor. (Revise degrees and angle minutes first if necessary.) BB: e.g. <math>31^\circ 17'</math> (read as '31 degrees and 17 angle minutes', to the nearest angle minute) <math>\approx 31^\circ</math> (to the nearest degree)</p> <p style="text-align: right;"><i>22 min</i></p>	<p><b>Notes</b></p> <p>Whole class activity</p> <p>Involve as many Ps as possible in measuring and writing measures on BB and in the discussion following.</p> <p>In good humour!</p> <p>(to nearest mm)</p> <p>BB: 1 whole turn = <math>360^\circ</math> <math>1^\circ = 60'</math></p>
<p><b>4</b></p>	<p><b>Angles</b></p> <p>What is the biggest unit we use to measure angles? (degrees) What is the next smaller unit? (angle minutes)</p> <p>Can you guess what the next smaller unit is? (angle seconds)</p> <p>How many angle seconds do you think are in an angle minute? (60)</p> <p>Angle seconds are so tiny that we cannot see them and this unit is only used by scientists in written calculations.</p> <p>It is possible to measure angle minutes with very precise equipment but we do not have it in the classroom! We must imagine each degree on the protractor divided into 60 equal parts, each part 1 angle minute.</p> <p>Let's fill in the missing numbers. Ps come to BB to write numbers and explain reasoning. Class agrees/disagrees.</p> <p>BB:</p> <p>a) <math>1^\circ = \boxed{60}'</math>      <math>0.1^\circ = \boxed{6}'</math>      <math>0.2^\circ = \boxed{12}'</math>  <math>0.9^\circ = \boxed{54}'</math>      <math>1.3^\circ = \boxed{78}'</math>      <math>2.5^\circ = \boxed{150}'</math></p> <p>b) <math>6' = \boxed{0.1}^\circ</math>      <math>18' = \boxed{0.3}^\circ</math>      <math>90' = \boxed{1.5}^\circ</math></p> <p style="text-align: right;"><i>26 min</i></p>	<p>Whole class activity</p> <p>BB: <math>1' = 60''</math> (1 angle minute = 60 angle seconds)</p> <p>Extra praise for Ps who guessed correctly.</p> <p>Written on BB or SB or OHT At a good pace Reasoning, agreement, praising Note similarity with time.</p>

<h1>Y5</h1>		<i>Lesson Plan 121</i>																																																																																													
<p><b>Activity</b></p> <p><b>5</b></p>	<p><b>PbY5b, page 121</b></p> <p>Q.1 Read: <i>A chemist was making up some medicine and measured out 3 different liquids very carefully in these quantities: 28 ml, 2.4 cl and 20.5 cl.</i></p> <p><i>How much liquid did he measure out altogether?</i></p> <p>Set a time limit of 1 minute. Ps write a plan, do the calculation and write the answer as a sentence</p> <p>Review with whole class. Ps come to BB to write operation and result. Who agrees? Who did it a different way? etc. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p><i>Plan:</i> 28 ml + 24 ml + 205 ml = 257 ml = <u>25.7 cl</u>          or 2.8 cl + 2.4 cl + 20.5 cl = <u>25.7 cl</u></p> <p><i>Answer:</i> The chemist measured out 25.7 cl of liquid altogether.</p> <p style="text-align: right;">29 min</p>	<p style="text-align: center;"><b>Notes</b></p> <p>Individual work, monitored, helped          (If possible, T has different coloured liquids already measured out to give Ps an idea of the quantities involved.)</p> <p>(Ps could show results on scrap paper or slates in unison.)</p> <p>Reasoning, agreement, self-correction, praising</p> <p>T chooses a P to read out the answer in a sentence.</p>																																																																																													
<p><b>6</b></p>	<p><b>PbY5b, page 121</b></p> <p>Q.2 Read: <i>Sally went shopping for an outfit for a wedding and made a list of what she had spent.</i></p> <p>Who has been to a wedding? Who was married? What did you wear? Did you buy anything new? If no P has, T tells briefly of own experience. (Show a photograph if possible!)</p> <p>Deal with one part at a time or set a time limit. Ps read questions themselves and do what is asked.</p> <p>Review with whole class. Ps come to BB or dictate what T should write, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) <i>Write the amounts in the place-value table and grid.</i></p> <p>BB:</p> <table style="display: inline-table; margin-right: 20px;"> <tr><th>H</th><th>T</th><th>U</th><th>t</th><th>h</th></tr> <tr><td></td><td>3</td><td>8</td><td>9</td><td>9</td></tr> <tr><td></td><td>4</td><td>0</td><td>5</td><td>0</td></tr> <tr><td></td><td>2</td><td>6</td><td>7</td><td>0</td></tr> <tr><td></td><td>3</td><td>4</td><td>5</td><td>0</td></tr> <tr><td>(£)</td><td>1</td><td>4</td><td>0</td><td>6</td><td>9</td></tr> <tr><td></td><td>2</td><td>2</td><td></td><td></td><td></td></tr> </table> <table style="display: inline-table; margin-right: 20px;"> <tr><td></td><td>3</td><td>8</td><td>9</td><td>9</td></tr> <tr><td></td><td>4</td><td>0</td><td>5</td><td>0</td></tr> <tr><td></td><td>2</td><td>6</td><td>7</td><td>0</td></tr> <tr><td>+</td><td>3</td><td>4</td><td>5</td><td>0</td></tr> <tr><td>(£)</td><td>1</td><td>4</td><td>0</td><td>6</td><td>9</td></tr> <tr><td></td><td>2</td><td>2</td><td></td><td></td><td></td></tr> </table> <p>b) <i>How much did Sally spend altogether?</i> (bottom row of table)  <i>Answer:</i> She spent £140.69 altogether.</p> <p>c) <i>If Sally had £200 in her bank account at the start of her shopping trip, how much did she have left at the end?</i></p> <p><i>Plan:</i> £200 – £140.69 = <u>£59.31</u>      C:</p> <table style="display: inline-table;"> <tr><td></td><td></td><td>10</td><td>10</td><td>10</td><td>10</td></tr> <tr><td></td><td>2</td><td>0</td><td>0</td><td>0</td><td>0</td></tr> <tr><td>–</td><td>1</td><td>4</td><td>0</td><td>6</td><td>9</td></tr> <tr><td></td><td>5</td><td>9</td><td>3</td><td>1</td><td></td></tr> </table> <p><i>Answer:</i> Sally had £59.31 left at the end.</p> <p style="text-align: right;">34 min</p>	H	T	U	t	h		3	8	9	9		4	0	5	0		2	6	7	0		3	4	5	0	(£)	1	4	0	6	9		2	2					3	8	9	9		4	0	5	0		2	6	7	0	+	3	4	5	0	(£)	1	4	0	6	9		2	2						10	10	10	10		2	0	0	0	0	–	1	4	0	6	9		5	9	3	1		<p>Individual work, monitored, (helped)</p> <p>Initial brief discussion to set the scene. Involve several Ps. Drawn on BB or use enlarged copy master or OHP</p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>Feedback for T</p> <p><b>Extension</b></p> <p>T points to each item in turn and Ps say its price in pence, then how many pence spent altogether and how many pence are left.</p>

<b>Y5</b>		<i>Lesson Plan 121</i>
<p><b>Activity</b></p> <p><b>7</b></p>	<p><b>PbY5b, page 121</b></p> <p>Q.3 Read: <i>Use the diagram to help you do this addition in different ways. Calculate using:</i></p> <p>a) <i>fractions, b) decimals, c) percentages.</i></p> <p>BB: <math>\frac{1}{5} + 0.3 + \frac{17}{100} + \frac{1}{10} + 0.21</math></p> <p>If possible, less able Ps have larger 10 by 10 grid on desks so that they can colour the parts more easily. Deal with one part at a time and set a time limit.</p> <p>Review with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes corrected.</p> <p><b>Solution:</b></p> <p>a) <u>Fractions:</u></p> $\frac{1}{5} + \frac{3}{10} + \frac{17}{100} + \frac{1}{10} + \frac{21}{100} = \frac{20 + 30 + 17 + 10 + 21}{100}$ $= \frac{98}{100}$ <p>b) <u>Decimals:</u> <math>0.2 + 0.3 + 0.17 + 0.1 + 0.21 = 0.6 + 0.38 = \underline{0.98}</math></p> <p>c) <u>Percentages:</u> <math>20\% + 30\% + 17\% + 10\% + 21\% = \underline{98\%}</math></p> <p><b>Extension</b></p> <p>If we colour all the parts mentioned, what part of the square is left uncoloured? Ps give the answer in the 3 forms.</p> <p>Uncoloured: <math>1 - \frac{98}{100} = \frac{2}{100} (= \frac{1}{50})</math></p> $1 - 0.98 = \underline{0.02}$ $100\% - 98\% = \underline{2\%}$ <p style="text-align: right;">39 min</p>	<p><b>Notes</b></p> <p>Individual work, monitored helped</p> <p>Grid squares drawn on BB or use enlarged copy master from LP 111/1b,</p> <p>Use copy master for LP 111/1a</p> <p>Reasoning (referring to diagram), agreement, self-correction, praising</p> <p>(Add terms in groups of tenths and hundredths)</p> <p>BB: </p>
<p><b>8</b></p>	<p><b>PbY5b, page 121, Q.4</b></p> <p>Read: <i>Solve the problems in your exercise book. Write only the answers here.</i></p> <p>Deal with one part at a time. T chooses a P to read the problem and Ps come to BB to draw a diagram (with T's help), write a plan and calculate the result. Who agrees? Who would do it another way? etc.</p> <p>T chooses Ps to say the answers in a sentence.</p> <p><b>Solution:</b></p> <p>a) <i>A rectangular games court has sides of length 45.8 m and 15.6 m. How long is the fence around it if the gate is 2.2 m wide?</i></p> <p>BB: <math>(45.8 \text{ m} + 15.6 \text{ m}) \times 2 - 2.2 \text{ m}</math></p> $= 61.4 \text{ m} \times 2 - 2.2 \text{ m}$ $= 122.8 \text{ m} - 2.2 \text{ m} = \underline{120.6 \text{ m}}$ <p>or Perimeter: <math>(45.8 \text{ m} + 15.6 \text{ m}) \times 2 = 61.4 \text{ m} \times 2 = 122.8 \text{ m}</math></p> <p>Length of fence: <math>122.8 \text{ m} - 2.2 \text{ m} = \underline{120.6 \text{ m}}</math></p> <p><b>Answer:</b> The length of the fence is 120.6 m.</p>	<p>Whole class activity (or individual trial first if Ps wish and there is time)</p> <p>Discussion, reasoning, agreement, (self-correction), praising</p> <p>Ps could write solutions in <i>Ex. Bks.</i> at the same time.</p> <p>BB: </p> $\begin{array}{r} 45.8 \\ + 15.6 \\ \hline 61.4 \\ \hline 122.8 \\ - 2.2 \\ \hline 120.6 \end{array}$

<b>Y5</b>		<i>Lesson Plan 121</i>
<b>Activity</b>		<b>Notes</b>
8	<p>(Continued)</p> <p>b) <i>The price of a bottle of medicine is £11.80, which includes the cost of the bottle. If the bottle costs £5.20 less than the medicine, how much are you paying for:</i></p> <p>i) <i>the medicine</i>    ii) <i>the bottle?</i></p> <p>BB: e.g. <math>B + M = £11.80</math>,    <math>B = M - £5.20</math>  <math>(M - £5.20) + M = £11.80</math>  <math>M + M = £11.80 + £5.20 = £17.00</math></p> <p>i) <math>M = £17.00 \div 2 = \underline{£8.50}</math>  ii) <math>B = £8.50 - £5.20 = \underline{£3.30}</math></p> <p>or If M cost the same as B, the price would be  <math>£11.80 - £5.20 = £6.60</math>  and M and B would each cost £3.30,  but M actually costs £5.20 more than B,  so <math>B = \underline{£3.30}</math> and <math>M = £3.30 + £5.20 = \underline{£8.50}</math></p> <p>or If B cost the same as M, the price would be  <math>£11.80 + £5.20 = £17.00</math>  and M and B would each cost <math>£17.00 \div 2 = £8.50</math>,  but B actually costs £5.20 less than M,  so <math>M = \underline{£8.50}</math> and <math>B = £8.50 - £5.20 = \underline{£3.30}</math></p> <p><i>Answer:</i> You are paying £5.20 for the medicine and £3.30 for the bottle.</p> <p style="text-align: right;"><i>45 min</i></p>	<p><b>Notes</b></p> <p>Let the bottle be B and the medicine be M.  T helps with the calculations and reasoning.</p> <p>Ps write the method they understand best in <i>Ex. Bks.</i></p> <p><i>Check:</i>  <math>£8.50 - £3.30 = £5.20</math> ✓  <math>£8.50 + £3.30 = £11.80</math> ✓</p>

<h1>Y5</h1>	<p>R: Whole numbers, fractions and decimals  C: <b>Multiplying and dividing by 10 or 100</b>  E: <i>Multiplying or dividing by 1000</i></p>	<h2>Lesson Plan 122</h2>
<p><b>Activity</b></p> <p><b>1</b></p>	<p><b>Sequences</b></p> <p>T writes the first 3 terms of a sequence on BB. Ps dictate the following terms, calculating on scrap paper or slates if they cannot do it mentally. T decides when to stop and asks final P to give the rule.</p> <p>BB:</p> <p>a) 1.2, 2.4, 3.6, (4.8, 6, 7.2, 8.4, 9.6, 10.8, 12, ...) [+ 1.2]  b) 1.2, 2.4, 4.8, (9.6, 19.2, 38.4, 76.8, 153.6, ...) [<math>\times 2</math>]  c) <math>\frac{1}{10000}</math>, <math>\frac{1}{1000}</math>, <math>\frac{1}{100}</math>, (<math>\frac{1}{10}</math>, 1, 10, 100, 1000, ...) [<math>\times 10</math>]  d) 58 600, 5860, 586, (58.6, 5.86, 0.586, 0.0586, ...) [<math>\div 10</math>]</p> <p style="text-align: right;">5 min</p>	<p><b>Notes</b></p> <p>Whole class activity  T chooses Ps at random.  In good humour!  At fast pace  Agreement, praising</p> <p>Feedback for T</p>
<p><b>2</b></p>	<p><b>Decimals and fractions</b></p> <p>a) Let's write this decimal as the sum of a whole number and fractions before we do the multiplication, then change it back to a decimal. Ps come to BB or dictate what T should write. Class points out errors. Before Ps do the multiplication, ask them to estimate first.</p> <p>BB: <math>3.497 \times 100 = (3 + \frac{4}{10} + \frac{9}{100} + \frac{7}{1000}) \times 100</math></p> $= 300 + 40 + 9 + \frac{7}{10} = \underline{349.7}$ <p>Let's compare 3.497 and 349.7. What do you notice? (Each digit has moved <u>2</u> place-values to the left.)</p> <p>b) Let's write this decimal as the sum of whole numbers and a fraction before we do the division. Ps come to BB or dictate what T should write. Class points out errors. Before doing the division, ask Ps to estimate result first.</p> <p>BB: <math>6082.5 \div 100 = (6000 + 80 + 2 + \frac{5}{10}) \div 100</math></p> $= 60 + \frac{8}{10} + \frac{2}{100} + \frac{5}{1000} = \underline{60.825}$ <p>Let's compare 6082.5 and 60.825. What do you notice? (Each digit has moved <u>2</u> place-values to the right.)</p> <p style="text-align: right;">10 min</p>	<p>Whole class activity  BB: <math>3.497 \times 100 =</math>  Reasoning, agreement, praising  E: <math>3.5 \times 100 = 350</math>  Multiply each term of the addition by 100.  Check result against estimate.  Show in a place-value table.</p> <p>BB: <math>6082.5 \div 100</math>  E: <math>6000 \div 100 = 60</math>  Divide each term of the addition by 100.  Check result against estimate.  Show in a place-value table.</p>
<p><b>3</b></p>	<p><b>Quantities</b></p> <p>Let's fill in the missing numbers. Ps come to BB to write numbers, explaining reasoning. Class agrees/disagrees.</p> <p>a) 26150 mm = <input type="text" value="2615"/> cm = <input type="text" value="26.15"/> m (= 0.02615 km)  b) 789 ml = <input type="text" value="78.9"/> cl = <input type="text" value="0.789"/> litres  c) 6370 g = <input type="text" value="6.370"/> kg      d) 1.843 kg = <input type="text" value="1843"/> g  e) 4.518 m = <input type="text" value="451.8"/> cm = <input type="text" value="4518"/> mm  f) 3.601 litres = <input type="text" value="360.1"/> cl = <input type="text" value="3601"/> ml  g) 5.8 m = <input type="text" value="580"/> cm = <input type="text" value="5800"/> mm</p> <p style="text-align: right;">18 min</p>	<p>Whole class activity  (or Ps write in <i>Ex. Bks</i> first, then review with whole class)  Written on BB or use enlarged copy master or OHP  At a good pace  Reasoning, agreement, praising  Note how the digits move to greater and lower place-values.  If problems or disagreement, show in a place-value table drawn on BB.  Feedback for T</p>

# Y5

R: Mental and written procedures  
 C: **Multiplying a decimal by a natural number**  
 E: *Problems in context*

## Lesson Plan 123

### Activity

1

#### Multiplication

Let's think of different ways to calculate these sums Ps suggest ways.

a) BB:  $5.3 + 5.3 = (10.6)$

or  $5.3 \times 2 = (5 + \frac{3}{10}) \times 2 = 10 + \frac{6}{10} = 10.6$

$$\begin{array}{r} 5.3 \\ + 5.3 \\ \hline 10.6 \end{array}$$

T: If the amount was 5.3 cm, we could change it to mm and do the multiplication with natural numbers, then change back to cm.

BB:  $5.3 \text{ cm} = 53 \text{ mm}$

$$\begin{array}{r} 53 \\ \times 2 \\ \hline 106 \end{array}$$

(mm) = 10.6 cm

T: Or we could multiply with decimals like this.

BB:

$$\begin{array}{r} 5.3 \\ \times 2 \\ \hline 10.6 \end{array}$$

2 times 3 tenths = 6 tenths

I write 6 in the tenths column in the answer

2 times 5 units = 10 units, so I write 0 in the units column and 1 in the tens column.

b) Let's do this sum in the same kinds of ways.

BB:  $5.3 + 5.3 + 5.3 + 5.3 + 5.3 = (26.5)$

or  $5.3 \times 5 = (5 + \frac{3}{10}) \times 5 = 25 + \frac{15}{10} = 26 + \frac{5}{10} = 26.5$

or  $5.3 \text{ cm} = 53 \text{ mm}$  or multiplying with decimals:

$$\begin{array}{r} 53 \\ \times 5 \\ \hline 265 \\ 1 \end{array}$$

(mm) = 26.5 cm

$$\begin{array}{r} 5.3 \\ \times 5 \\ \hline 26.5 \\ 1 \end{array}$$

5 min

### Notes

Whole class activity

T gives hints if Ps cannot think of any.

Reasoning, agreement, praising

Ps dictate what T should write, reasoning with place-value detail.

T starts reasoning and Ps continue it.

T points out that the product should have the same number of digits after the decimal point as the multiplicand.

BB:

$$\begin{array}{r} 5.3 \\ 5.3 \\ 5.3 \\ 5.3 \\ + 5.3 \\ \hline 26.5 \\ 1 \end{array}$$

T helps where necessary.

2

#### Mental multiplication

Let's see if you can do these calculations mentally. Ps come BB to write products, reasoning loudly with place-value details. Class agrees/disagrees.

BB:

a)  $21 \times 4 = 84$

b)  $63 \times 2 = 126$

c)  $2 \times 4 = 8$

$2.1 \times 4 = 8.4$

$6.3 \times 2 = 12.6$

$0.2 \times 4 = 0.8$

d)  $43 \times 4 = 172$

e)  $7 \times 9 = 63$

f)  $9 \times 6 = 54$

$4.3 \times 4 = 17.2$

$0.09 \times 7 = 0.63$

$0.09 \times 6 = 0.54$

g)  $203 \times 4 = 812$

h)  $11 \times 11 = 121$

$2.03 \times 4 = 8.12$

$0.11 \times 11 = 1.21$

Who can explain how to multiply a decimal by a natural number?

T asks several Ps what they think, then repeats in a clear way.

'We multiply a decimal number by a natural number in the same way as we multiply a natural number by a natural number. Then we must mark the decimal point so that there is the same number of decimal digits in the product as there is in the multiplicand.'

15 min

Whole class activity

Written on BB or use enlarged copy master or OHP

Reasoning, e.g.  $6.3 \times 2$ :

2 times 6 is 12,  $2 \times 0.3$  is 0.6,  $12 + 0.6 = 12.6$

Agreement, praising

Discussion, agreement, praising

Elicit that the multiplicand is the number being multiplied.

Class repeats in unison.

# Y5

## Lesson Plan 123

### Activity

3

*PbY5b, page 123*

Q.1 Read: Write each operation in a shorter way and calculate the result.

Elicit that the shorter way is multiplication. Set a time limit.

Review with whole class. Ps come to BB or dictate to T, explaining reasoning with place-value detail. Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

a)  $2.7 + 2.7 + 2.7 + 2.7 = 2.7 \times 4$   
 $= 2 \times 4 + 0.7 \times 4 = 8 + 2.8 = \underline{10.8}$

or  $2.7 \times 4 = (2 + \frac{7}{10}) \times 4 = 8 + \frac{28}{10} = 10 + \frac{8}{10} = \underline{10.8}$

b)  $13.26 + 13.26 + 13.26 + 13.26 + 13.26 = 13.26 \times 5$   
 $= 13 \times 5 + 0.26 \times 5 = 65 + (\frac{26}{100} \times 5)$   
 $= 65 + \frac{130}{100} = 66 + \frac{30}{100} = \underline{66.3}$

or 
$$\begin{array}{r} 13.26 \\ \times 5 \\ \hline 66.30 \\ \hline \end{array}$$

or 
$$\begin{array}{r} 13.26 \\ \times 5 \\ \hline 66.30 \\ \hline \end{array}$$

'5 times 6h = 30h = 3t + 0h

I write 0 in the hundredths column and write 3 below the tenths column.' etc.

c)  $0.83 + 0.83 + 0.83 = 0.83 \times 3 = \frac{8}{10} \times 3 + \frac{3}{100} \times 3$   
 $= \frac{24}{10} + \frac{9}{100} = 2 + \frac{4}{10} + \frac{9}{100} = \underline{2.49}$

If problems or disagreement, check by doing the addition.

Check:

$$\begin{array}{r} 0.83 \\ 0.83 \\ + 0.83 \\ \hline 2.49 \end{array}$$

23 min

### Notes

Individual work, monitored, helped

Written on BB or SB or OHT

Reasoning, agreement, self-correction, praising

Accept any correct form of multiplication but also show the vertical form with decimals as shown below.

or 
$$\begin{array}{r} 2.7 \\ \times 4 \\ \hline 10.8 \end{array}$$

Reasoning: e.g.

'4 times 7t = 28t = 2U + 8t

I write 8 in the tenths column and write 2 below the units column.

4 times 2U = 8U;

8U + 2U = 10U = 1T + 0U

I write 0 in the units column and 1 in the tens column.

As 2.7 has 1 decimal digit, I mark the decimal point between the 0 and the 8 in the product.'

or 
$$\begin{array}{r} 0.83 \\ \times 3 \\ \hline 2.49 \end{array}$$
 or 
$$\begin{array}{r} 0.83 \\ \times 3 \\ \hline 2.49 \end{array}$$

4

*PbY5b, page 123*

Q.2 Deal with one part at a time or set a time limit. Ps read problems themselves, write an operation and calculate the result.

Review with whole class. Ps could show result on scrap paper or slates on command. Ps answering correctly explain at BB to Ps who were wrong. Who did the same? Who did it a different way? etc. Mistakes discussed and corrected.

*Solution:* e.g.

a) The length of each side of a square is 52.4 cm.

Write the length of its perimeter in cm, mm and metres.

$P = 52.4 \text{ cm} \times 4 = \underline{209.6 \text{ cm}} = \underline{2096 \text{ mm}} = \underline{2.096 \text{ m}}$

b) The length of the sides of a rectangle are  $b = 6.42 \text{ cm}$  and  $a = 2 \times b$ . What is the length of its perimeter?

$P = (6.42 \text{ cm} + 12.84 \text{ cm}) \times 2 = 19.26 \text{ cm} \times 2 = \underline{38.52 \text{ cm}}$

or  $P = (a + b) \times 2 = 3a \times 2 = 6a = 6.42 \text{ cm} \times 6 = \underline{38.52 \text{ cm}}$

Individual work, monitored, helped

Diagrams drawn on BB.

Reasoning, agreement, self-correction, praising

Accept any valid method.

BB:

a) 
$$\begin{array}{r} 52.4 \\ \times 4 \\ \hline 209.6 \end{array}$$

$a = 52.4 \text{ cm}$

b) 
$$\begin{array}{r} 19.26 \\ \times 2 \\ \hline 38.52 \end{array}$$

or 
$$\begin{array}{r} 6.42 \\ \times 6 \\ \hline 38.52 \end{array}$$

29 min

**Y5**

*Lesson Plan 123*

**Activity**

**Notes**

5

**PbY5b, page 123**

Q.3 Read: *Calculate the products. Estimate the result mentally first.*

Ps write estimates (rounding to the nearest whole number) above calculations in *Pbs* and check results against them. Set a time limit

Review with whole class. Ps come to BB to show solutions, reasoning with place-value detail. Class agrees/disagrees. Mistakes discussed and corrected.

What do you notice about the multipliers? (Not in their correct place-value column) T tells Ps that it is not necessary to write the multiplier in the correct place-value column, as we are not adding or subtracting and it does not affect the result. T shows the multiplications written with multipliers in correct column. Ps decide which version they find easier to work with.

**Solution:**

$$E: 8 \times 3 = 24 \quad E: 6 \times 5 = 25 \quad E: 15 \times 7 = 105 \quad E: 102 \times 11 = 1122$$

a) 

8	.	1	
× 3			
2	4	.	3

 b) 

5	.	6	.	2	
× 5					
2	8	.	0	.	0
			3		1

 c) 

1	5	.	0	.	6				
× 7									
1	0	.	5	.	4	.	2		
						3			4

 d) 

1	0	.	2	.	1	.	0			
× 1 1										
1	1	.	2	.	3	.	1	.	0	
								2		1

or with multipliers in corresponding place-value columns:

a) 

8	.	1	
× 3			
2	4	.	3

 b) 

5	.	6	.	2	
× 5					
2	8	.	0	.	0
			3		1

 c) 

1	5	.	0	.	6				
× 7									
1	0	.	5	.	4	.	2		
						3			4

 d) 

1	0	.	2	.	1	.	0			
× 1 1										
1	1	.	2	.	3	.	1	.	0	
								2		1

*34 min*

Individual work, monitored, helped  
Written on BB or use enlarged copy master or OHP  
Reasoning, agreement, self-correction, praising  
Feedback for T  
  
Discussion on layout of multiplications.

Reiterate that when multiplying a decimal number by a natural number, the product must have the same number of decimal digits as the multiplicand.

6

**PbY5b, page 123**

Q.4 Read: *Which is more? Calculate in your exercise book, then fill in the missing signs.*

Deal with one at a time or set a time limit.

Review with whole class. Ps come to BB to write values of LHS and RHS of inequality, then to write the missing sign. Class agrees/disagrees. Mistakes discussed and corrected.

Show details of calculations if problems or disagreement.

**Solution:**

a) 43 times 2.5 m  25 times 5.3 m

		2	.	5	
× 4 3					
			7	5	
1	0			0	
1	0	7	.	5

					1

		1	.	2	
× 4 8					
			9	6	
4	8			0	
5	7	.	6		
					1

Individual work, monitored, helped  
(or whole class activity if time is short)  
Written on BB or SB or OHT  
Discussion, reasoning, agreement, self-correction, praising

Extra praise if Ps reason correctly without doing the calculations in c):  
 $4.8 \times 12 = 1.2 \times 48$   
(as  $48 \times 12 = 12 \times 48$ , and products on LHS and RHS both have 1 digit after the decimal point)

*39 min*

# Y5

## Lesson Plan 123

### Activity

7

*PbY5b, page 123*

Q.5 Read: *Solve the problems in your exercise book and write the answers in a sentence here.*

Deal with one at a time or set a time limit. Review with whole class. Ps could write answers on slates or scrap paper and show on command.

A, tell us how you worked it out. Who did the same? Who did it a different way? etc. Mistakes discussed and corrected.

T chooses a P to read the answer in a sentence.

*Solution:* e.g.

a) *Pete has £36 50 p. Olivia has twice as much and Sue has 3 times as much as Pete.*

*If they all put all their money together, do they have enough to buy a television which costs £210?*

P: £36.50, O:  $£36.50 \times 2 = £73$ , S:  $£36.50 \times 3 = £109.50$

$P + O + S: £36.50 + £73 + £109.50 = £219.00$ ,

$£219 > £210$

or  $P + O + S = P + P \times 2 + P \times 3 = P \times 6$

$£36.50 \times 6 = £219.00, £219 > £210$

*Answer:* Yes, they have enough to buy a television set.

b) *The units of measure used when measuring angles are degrees and minutes.*

*If 1 degree equals 60 minutes, how many degrees is 6 times  $12^\circ 30'$ ?*

*Plan:*  $(12^\circ + 30') \times 6 = 72^\circ + 180' = 72^\circ + 3^\circ = 75^\circ$

or  $12^\circ 30' = 12.5^\circ, 12.5^\circ \times 6 = 75^\circ$

*Answer:* Six times 12 degrees 30 minutes is 75 degrees.

45 min

### Notes

Individual work, monitored, helped

(or whole class activity, with Ps suggesting what to do first and how to continue)

Responses shown in unison (or can use pre-agreed actions for a))

Discussion, reasoning, agreement, self-correction, praising

BB:

$$\begin{array}{r} 109.50 \\ + 73.00 \\ + 36.50 \\ \hline (\pounds) 219.00 \\ \text{1 1 1} \end{array}$$

$$\begin{array}{r} 36.50 \\ \times 6 \\ \hline (\pounds) 219.00 \\ \text{3 3} \end{array}$$

$$\begin{array}{r} 12.5 \\ \times 6 \\ \hline 75.0 \end{array} \quad (^\circ)$$

<h1>Y5</h1>	<p>R: (Mental) calculation  <b>C: Multiplying decimals by natural numbers</b>  E: Problems. Equations, inequalities</p>	<h2>Lesson Plan 124</h2>
<b>Activity</b>  1	<b>Sequences</b> Here are 3 terms of a sequence. Continue it for 3 more terms in either direction. Ps calculate mentally (or in <i>Ex. Bks</i> or on scrap paper or slates if necessary) and dictate terms to T. Class agrees/disagrees. What is the rule? a) (1.1, 1.8, 2.5), 3.2, 3.9, 4.6, (5.3, 6, 6.7) [+ 0.7] b) (14.4, 7.2, 3.6), 1.8, $\frac{9}{10}$ , $\frac{9}{20}$ , ( $\frac{9}{40}$ , $\frac{9}{80}$ , $\frac{9}{160}$ ) [ $\div 2$ ] Elicit decimal forms too: 0.9, 0.45, (0.225, 0.1125, 0.05625) c) ( $\frac{3}{1000}$ , $\frac{9}{1000}$ , $\frac{27}{1000}$ ), $\frac{81}{1000}$ , $\frac{243}{1000}$ , $\frac{729}{1000}$ , ( $\frac{2187}{1000}$ , $\frac{6561}{1000}$ , $\frac{19683}{1000}$ ) [ $\times 3$ ] Elicit the decimal forms too: 0.003, 0.009, 0.027, 0.081, 0.243, 0.729, 2.187, 6.561, 19.683 <p style="text-align: right;">6 min</p>	<b>Notes</b> Whole class activity Given terms written in middle of BB or SB or OHT (Terms given by Ps shown brackets) At a good pace Reasoning, agreement, praising  Feedback for T
2	<b>Solving equations</b> Deal with one at a time. Pupils copy equation in <i>Ex. Bks</i> and try to solve it, checking that their solution makes the equation true. When Ps have an answer, they come to BB to explain to class. Class checks that they are correct. Elicit the general rule for solving such equations. Ask several Ps what they think, then repeat it more clearly if necessary. BB: a) $2 \times 0.9 - x = 0.7$ $1.8$ $1.8 - x = 0.7$ <i>Check:</i> $2 \times 0.9 - \underline{1.1} = 0.7$ ✓ $x = 1.8 - 0.7 = \underline{1.1}$ To get the unknown subtrahend, subtract the difference from the reductant. b) $y - 2.7 \div 3 = 1.5$ $0.9$ $y - 0.9 = 1.5$ <i>Check:</i> $\underline{2.4} - 2.7 \div 3 = 1.5$ ✓ $y = 1.5 + 0.9 = \underline{2.4}$ To get the unknown reductant, add the subtrahend to the difference. c) $(u + 2.5) \div 3 = 5.9$ $17.7$ $u + 2.5 = 5.9 \times 3 = 17.7$ <i>Check:</i> $(\underline{15.2} + 2.5) \div 3 = 5.9$ ✓ $u = 17.7 - 2.5 = \underline{15.2}$ or $(15 + 2.7) \div 3 = 5 + 0.9 = 5.9$ <p style="text-align: right;">14 min</p>	Whole class activity Written on BB or SB or OHT Allow Ps 2 minutes for each part. Encourage a logical solution rather than trial and error. If several Ps have an answer, they could show to T on scrap paper or slates in unison on command. Reasoning, agreement, praising  Generalise the rules. e.g. If $a \div b = c$ , then $a = b \times c$ If $a + b = c$ , then $a = c - b$
3	<b>Parts of quantities</b> a) <i>Let's calculate 0.7 of 63 kg.</i> How could we do it? Ps come to BB or dictate to T. BB: $0.7$ of 63 kg = $\frac{7}{10}$ of 63 kg = $\boxed{63 \text{ kg} \div 10 \times 7}$ = $6.3 \text{ kg} \times 7$ = $42 \text{ kg} + 2.1 \text{ kg} = \underline{44.1 \text{ kg}}$ or using direct proportion: 0.1 of 63 kg $\rightarrow$ 63 kg $\div$ 10 = 6.3 kg 0.7 of 63 kg $\rightarrow$ $\boxed{63 \text{ kg} \div 10 \times 7} = 6.3 \text{ kg} \times 7 = \underline{44.1 \text{ kg}}$	Whole class activity Allow Ps to suggest methods of calculation. Class agrees/disagrees. T intervenes only if necessary. Reasoning, agreement, praising  T highlights the important part of the operation.

**Y5**

*Lesson Plan 124*

**Activity**

3

(Continued)

b) *Let's multiply 63 by 0.7.*

Ps come to BB to write the calculation, explaining reasoning with place value detail. Class points out errors.

T: When we multiply a decimal by a natural number or a natural number by a decimal, we calculate as if both are natural numbers, then we mark the decimal point in the product so that it has the same number of decimal digits as the original decimal.

What do you notice about the result? [Same result as a)]

c) *Let's calculate 70% of 63 kg.*

Ps come to BB or dictate what T should write. T helps where necessary. Agree that 70% means 70 hundredths.

$$70\% \text{ of } 63 \text{ kg} = \frac{70}{100} \text{ of } 63 \text{ kg} = \boxed{63 \text{ kg} \div 100 \times 70}$$

$$= 0.63 \text{ kg} \times 70 = \underline{44.1 \text{ kg}}$$

or using direct proportion:

$$1\% \text{ of } 63 \text{ kg} \rightarrow 63 \text{ kg} \div 100 = 0.63 \text{ kg}$$

$$70\% \text{ of } 63 \text{ kg} \rightarrow 63 \text{ kg} \div 100 \times 70 = 0.63 \text{ kg} \times 70 = \underline{44.1 \text{ kg}}$$

$$\text{or } 10\% \text{ of } 63 \text{ kg} \rightarrow 63 \text{ kg} \div 10 = 6.3 \text{ kg}$$

$$70\% \text{ of } 63 \text{ kg} \rightarrow \boxed{63 \text{ kg} \div 10 \times 7} = 6.3 \text{ kg} \times 7 = \underline{44.1 \text{ kg}}$$

What do you notice about the 3 results? Elicit that :

BB:  $0.7 \text{ of } 63 = 63 \times 0.7 = 70\% \text{ of } 63 = 44.1$

*19 min*

**Notes**

BB:

$$\begin{array}{r} 0.7 \\ \times 63 \\ \hline 21 \\ 420 \\ \hline 441 \end{array} \quad \text{or} \quad \begin{array}{r} 63 \\ \times 0.7 \\ \hline 441 \\ \hline 2 \end{array}$$

BB:

$$\begin{array}{r} 0.63 \\ \times 70 \\ \hline 000 \\ 4410 \\ \hline 4410 \end{array}$$

(as  $\frac{70}{100} = \frac{7}{10}$ )

$$\begin{array}{r} 6.3 \\ \times 7 \\ \hline 441 \\ \hline 2 \end{array}$$

Agreement, praising

4

**Inequalities**

Which numbers could be written instead of the shapes? Accept and praise any valid numbers suggested by Ps, then T helps to find the whole solution. Class checks that the solution is correct.

BB:

a)  $5 \times \square \leq 4$  (Ps might suggest 0, -1, 0.1, 0.5, etc.)

$$\square \leq 4 \div 5 \quad (4 \div 5 = \frac{4}{5} = \frac{8}{10} = 0.8)$$

$$\square \leq 0.8 \quad \text{Check: } 5 \times 0.8 = 4 \quad \checkmark$$

b)  $1.2 \times \bigcirc > 6$  (Ps might suggest 6, 7, 8, etc.)

$$\bigcirc > 6 \div 1.2 \quad (6 \div 1.2 = 60 \div 12 = 5)$$

$$\bigcirc > 5 \quad \text{Check: } 1.2 \times 5 = 6 \quad \checkmark$$

c)  $9 < 3.2 \times \triangle < 33$  (Ps might suggest 3, 4, 5, etc.)

Lowest value: If  $\triangle = 3$ ,  $3.2 \times 3 = 9.6 > 9$

Greatest value: If  $\triangle = 10$ ,  $3.2 \times 10 = 32 < 33$

So  $3 < \triangle < 10$

$\triangle$ : 3, 4, 5, 6, 7, 8, 9, 10 (If  $\triangle$  is a whole number)

*25 min*

Whole clas activity

Written on BB or SB or OHT

Discussion, reasoning, agreement, checking, praising

Involve as many Ps as possible.

(So any multiplier  $< 0.8$  results in a product  $< 4$ .)

(So any multiplier  $> 5$  results in a product  $> 6$ .)

This is best done by trial and error, as dividing 9 and 33 by 3.2 is too difficult at this stage, but if Ps suggest it, T could use a calculator and round appropriately: e.g.

$$2.81 < \triangle < 10.31$$

(correct to 2 decimal places)

# Y5

## Lesson Plan 124

### Activity

5

*PbY5b, Page 124*

Q.1 Read: *Calculate the products.*

What do you notice about the multipliers here? (They are written in the appropriate place-value columns.)

Remind Ps to do each calculation as if the two numbers were both natural numbers, then to mark the decimal point in the product so that it has the same number of decimal digits as the multiplicand. What should you do first? (Estimate the result as a check.) Set a time limit.

Review with whole class. Ps come to BB to estimate, do the calculations and explain reasoning with place-value details. Class agrees/ disagrees. Mistakes discussed and corrected.

*Solution:*

<p>E: <math>3 \times 3 = 9</math></p> <p>a) <math display="block">\begin{array}{r} 2.8 \\ \times 3 \\ \hline 8.4 \\ 2 \end{array}</math></p>	<p>E: <math>4 \times 5 = 20</math></p> <p>b) <math display="block">\begin{array}{r} 4.36 \\ \times 5 \\ \hline 21.80 \\ 13 \end{array}</math></p>	<p>E: <math>20 \times 7 = 140</math></p> <p>c) <math display="block">\begin{array}{r} 20.3 \\ \times 7 \\ \hline 142.1 \\ 2 \end{array}</math></p>
<p>E: <math>30 \times 60 = 1800</math></p> <p>d) <math display="block">\begin{array}{r} 28.1 \\ \times 59 \\ \hline 252.9 \\ + 1405.0 \\ \hline 1657.9 \end{array}</math></p>	<p>E: <math>0.1 \times 50 = 5</math></p> <p>e) <math display="block">\begin{array}{r} 0.06 \\ \times 54 \\ \hline 2.4 \\ + 30.0 \\ \hline 3.24 \end{array}</math></p>	<p>E: <math>24 \times 100 = 2400</math></p> <p>f) <math display="block">\begin{array}{r} 24.32 \\ \times 109 \\ \hline 218.88 \\ + 2432.00 \\ \hline 2650.88 \\ 1 \end{array}</math></p>

31 min

### Notes

Individual work, monitored, helped  
 Written on BB or use enlarged copy master or OHP  
 Differentiation by time limit.  
 Discussion, reasoning, agreement, self-correction, praising

Ask Ps what they think of this layout of multiplications. (Most Ps will probably find it easier to write the multiplier at the RHS.)

Agree that the result is the same in both cases, so it does not really matter – Ps should use the easiest layout.

6

*PbY5b, page 124*

Q.2 Ps read problems themselves, then calculate in *Pbs* or in *Ex. Bks.* Set a time limit.

Review with whole class. Ps could show results on slates or scrap paper on command. Ps answering correctly show operation on BB. Class agrees/disagrees. Mistakes discussed and corrected.

Agree that:  $\frac{3}{5} = \frac{6}{10} = 0.6 = \frac{60}{100} = 60\%$ ,

so all the questions are really the same!

*Solution:* (In one line as below, or in two steps as opposite)

a)  $\frac{3}{5}$  of 840 m =  $840 \text{ m} \div 5 \times 3 = 168 \text{ m} \times 3 = \underline{504 \text{ m}}$

b)  $0.6$  of 840 m =  $840 \text{ m} \div 10 \times 6 = 84 \text{ m} \times 6 = \underline{504 \text{ m}}$

c)  $60\%$  of 840 m =  $840 \text{ m} \div 100 \times 60 = 8.4 \text{ m} \times 60 = 84 \text{ m} \times 6 = \underline{504 \text{ m}}$

35 min

Individual work, monitored, helped  
 Responses shown in unison.  
 In good humour!  
 Reasoning, agreement, self-correction, praising  
 Extra praise for Ps who realised this!

a)  $\frac{1}{5}$  of 840 m =  $840 \text{ m} \div 5 = 168 \text{ m}$

$\frac{3}{5}$  of 840 m =  $168 \text{ m} \times 3 = \underline{504 \text{ m}}$

**Y5**

Lesson Plan 124

**Activity**

7

**PbY5b, page 124, Q.3**

Read: *Which number am I thinking of? Write a plan and do the calculation.*

Deal with one part at a time. T chooses a P to read out the question. Rest of Ps write a plan and do calculation in *Ex. Bks*, then show their result on command. Ps answering correctly explain their reasoning to Ps who were wrong. Who did the same? Who did it a different way? etc. Ps who were wrong write correct plan and result in *Pbs*.

**Solution:**

- a) *Half of the number I am thinking of is 2.3 more than 3.8.*

*What is my number?*

$$\text{Plan: } x \div 2 = 3.8 + 2.3 = 6.1 \quad \text{or} \quad (3.8 + 2.3) \times 2 = \underline{12.2}$$

$$x = 6.1 \times 2 = \underline{12.2}$$

$$\text{Check: Half of } \underline{12.2} = (12 + \frac{2}{10}) \div 2 = 6 + \frac{1}{10} = 6.1$$

$$6.1 - 2.3 = 3.8 \quad \checkmark$$

- b) *If I subtract 10.4 from the number I am thinking of, the difference is 3 times 1.2. What is my number?*

$$\text{Plan: } y - 10.4 = 1.2 \times 3 = 3.6 \quad \text{or} \quad 1.2 \times 3 + 10.4 = \underline{14}$$

$$y = 3.6 + 10.4 = \underline{14}$$

$$\text{Check: } 14 - 10.4 = 3.6, 3.6 \div 3 = 1.2 \quad \checkmark$$

- c) *If I add 4.3 to the number I am thinking of, the sum is 5 times 2.3.*

*What is my number?*

$$\text{Plan: } z + 4.3 = 2.3 \times 5 = 11.5 \quad \text{or} \quad 2.3 \times 5 - 4.3 = \underline{7.2}$$

$$z = 11.5 - 4.3 = \underline{7.2}$$

$$\text{Check: } 7.2 + 4.3 = 11.5, 11.5 = 5 \times 2.3 \quad \checkmark$$

41 min

**Notes**

Whole class activity but individual calculation

P at front of class acts as the T, giving the command for Ps to show their results and choosing Ps with correct answer to explain their solutions.

Use a different P for each question.

T intervenes only if necessary.

In good humour!

Reasoning, agreement, self-correction, praising

Feedback for T

8

**PbY5b, Page 124, Q.4**

Read: *Find a rule and complete the table. Write the rule in different ways.*

Agree on one form of the rule using the completed columns. Ps come to BB to choose a column and fill in the missing number, explaining reasoning. Class agrees/disagrees. Ps fill in table in *Pbs* too.

Who can write the rule in a mathematical way? Who can think of another way to write it? etc. Class checks rules mentally with values from table.

**Solution:**

a	0.4	1	$\frac{1}{3}$	4	$\frac{1}{7}$	$\frac{2}{9}$	<b>0.7</b>	10.1	0.9	$-\frac{1}{2}$
b	2.4	6	2	<b>24</b>	$\frac{6}{7}$	$\frac{12}{9}$	4.2	<b>60.6</b>	<b>5.4</b>	<b>-3</b>

$$\text{Rule: } b = 6 \times a, a = b \div 6, b \div a = 6, a \div b = \frac{1}{6}$$

45 min

Whole class activity  
(or individual trial first if Ps wish and there is time)

Drawn on BB or use enlarged copy master or OHP

**Bold** numbers are missing.

Reasoning, agreement, praising

(or Ps could write other forms of the rule for homework)

Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) i) <math>36 \div 9 = \underline{4}</math>, ii) <math>3.6 \div 9 = \underline{0.4}</math>, iii) <math>0.36 \div 9 = \underline{0.04}</math>          b) i) <math>56 \div 7 = \underline{8}</math>, ii) <math>5.6 \div 7 = \underline{0.8}</math>, iii) <math>0.56 \div 7 = \underline{0.08}</math>          c) i) <math>48 \div 6 = \underline{8}</math>, ii) <math>4.8 \div 6 = \underline{0.8}</math>, iii) <math>0.48 \div 6 = \underline{0.08}</math>          d) i) <math>96 \div 8 = \underline{12}</math>, ii) <math>9.6 \div 8 = \underline{1.2}</math> iii) <math>0.96 \div 8 = \underline{0.12}</math></p> <p style="text-align: right;"><i>20 min</i></p>	<p>Individual work, monitored</p> <p>Written on BB or SB or OHT</p> <p>Differentiation by time limit</p> <p>Reasoning, agreement, self-correction, praising</p> <p>T asks Ps to show some divisions in fractional form. too. e.g.</p> <p>BB: <math>\frac{48}{100} \div 6 = \frac{8}{100} (= 0.8)</math></p>
<p>5</p>	<p><b>Money model</b></p> <p>T has appropriate amounts of model money on desk.</p> <p>Let's stick 8 £10 notes, 1 £1 coin and 7 10 p coins on the BB.</p> <p>How much money do they make up altogether?(£81 70 p)</p> <p>What is the amount in £s? (£81.70 or £81.7)</p> <p>Let's divide it into 5 equal parts. How could we do it? Ps suggest ways. T directs Ps thinking if necessary. (Start with the largest place-value, i.e. tens, divide them by 5, then change any remaining tens into the the next smallest place-value, i.e. units, etc.)</p> <p>T (P) manipulates money on BB (Ps do the same on desks if possible), then T writes calculation on BB, explaining with place-value detail.</p> <p>BB: 8 tens ÷ 5 = <u>1 ten</u> (1 £10 note moved into each of 5 groups, or          – 5 tens (5 £10 notes used altogether) given to each of 5 Ps)  <u>3 tens</u> (3 £10 notes remain)</p> <p>We can change the 3 tens remaining into 30 units (£1 coins), add to the unit already there to make 31 units, then continue the division.</p>	<p>Whole class activity</p> <p>Coins needed for the activity:          £10 (8); £1 (31); 10 p (17);          1 p (20) (or use copy master)</p> <p>BB:</p>  <p>Ideally, Ps have model money on desks too and work in pairs.</p> <p>If Ps have no ideas, T starts and Ps continue, following the T's example.</p> <p>Discussion, reasoning, demonstration, agreement, praising</p>

# Y5

## Lesson Plan 126

### Activity

5

(Continued)

$$\begin{array}{r} \text{BB: } 31 \text{ units} \div 5 = \underline{6 \text{ units}} \text{ (6 } \pounds 1 \text{ coins put in each of the 5 groups)} \\ - 30 \text{ units} \quad (30 \pounds 1 \text{ coins used altogether)} \\ \hline 1 \text{ unit} \quad (1 \pounds 1 \text{ coin remains)} \end{array}$$

We can change the 1 unit remaining into 10 tenths (10 p), add to the 7 tenths already there to make 17 tenths and continue the division.

$$\begin{array}{r} \text{BB: } 17 \text{ tenths} \div 5 = \underline{3 \text{ tenths}} \text{ (3 10 p coins in each of the 5 groups)} \\ - 15 \text{ tenths} \quad (15 \text{ 10 p coins used altogether)} \\ \hline 2 \text{ tenths} \quad (2 \text{ 10 p coins remain)} \end{array}$$

We can change the 2 tenths remaining into 20 hundredths (1 p) and continue the division.

$$\begin{array}{r} \text{BB: } 20 \text{ hundredths} \div 5 = \underline{4 \text{ hundredths}} \text{ (4 1 p coins in each group)} \\ - 20 \text{ hundredths} \quad (20 \text{ 1 p coins used altogether)} \\ \hline 0 \text{ hundredths} \quad (\text{and no 1 p coins remain}) \end{array}$$

How much is in each group? (£16 34 p) How many pounds are in each group? (1 ten + 6 units + 3 tenths + 4 hundredths, i.e. (£) 16.34.

If we think of the amount as a decimal number rather than an amount of money, how would we write the division? (BB)

Let's write this calculation vertically as a long and a short division. What should we do first? (Estimate the result as a check)

Ps come to BB to estimate by rounding to nearest whole number, to write the long and short divisions, reasoning with place-value detail, and to check with a multiplication. Class points out errors.

BB: *Long division:*  $81.7 \div 5 = \underline{16.34}$

$$\begin{array}{r} \phantom{0} 1 \ 6 \ . \ 3 \ 4 \\ 5 \overline{) 8 \ 1 \ . \ 7 \ 0} \\ - 5 \phantom{0} \phantom{0} \phantom{0} \phantom{0} \\ \hline \phantom{0} 3 \ 1 \phantom{0} \phantom{0} \phantom{0} \\ - 3 \ 0 \phantom{0} \phantom{0} \phantom{0} \\ \hline \phantom{0} \phantom{0} 1 \ 7 \phantom{0} \phantom{0} \\ - \phantom{0} \phantom{0} 1 \ 5 \phantom{0} \phantom{0} \\ \hline \phantom{0} \phantom{0} \phantom{0} 2 \ 0 \phantom{0} \\ - \phantom{0} \phantom{0} \phantom{0} 2 \ 0 \phantom{0} \\ \hline \phantom{0} \phantom{0} \phantom{0} \phantom{0} 0 \phantom{0} \end{array}$$

*E:*  $80 \div 5 = 16$

*Short division:*

$$\begin{array}{r} \phantom{0} 1 \ 6 \ . \ 3 \ 4 \\ 5 \overline{) 8 \ 1 \ . \ 7 \ 0} \\ \phantom{0} 3 \ 1 \ 2 \end{array}$$

*Check:*  $\begin{array}{r} \phantom{0} 1 \ 6 \ . \ 3 \ 4 \\ \times 5 \\ \hline 8 \ 1 \ . \ 7 \ 0 \end{array}$  ✓

### Notes

At a quicker pace as Ps begin to understand the concept.

Each group:

BB:  $\pounds 81.70 \div 5 = \underline{\pounds 16.34}$

BB:  $81.70 \div 5 = \underline{16.34}$   
or  $81.7 \div 5 = \underline{16.34}$

Ps suggest what to do and how to continue.

Grids drawn on BB or use enlarged copy master or OHP

Reasoning (with T's help where necessary), agreement, correcting, praising

Ps could write the divisions in *Ex. Bks* too.

### Extension

Who can think of other ways to do the division? Ps suggest ways (or T gives hints or shows on BB if Ps cannot think of any and then asks if it is correct). e.g.

- Change the pounds to pence, do the division in the normal way, then change back to pounds (as opposite).

- Use fractions:

$$\begin{aligned} 81.7 \div 5 &= \left(81 + \frac{7}{10}\right) \div 5 = \left(80 + \frac{17}{10}\right) \div 5 = 16 + \frac{17}{50} \\ &= 16 + \frac{17}{50} = 16 + \frac{34}{100} = \underline{16.34} \end{aligned}$$

•  $81.7 \div 5 = 817 \div 50 = (500 + 300 + 17) \div 50 = 10 + 6 + \frac{17}{50} \rightarrow$

Whole class activity

BB:  $\pounds 81.7 = 8170 \text{ p}$

In pence:

$$\begin{array}{r} \phantom{0} 1 \ 6 \ 3 \ 4 \\ 5 \overline{) 8 \ 1 \ 7 \ 0} \\ \phantom{0} 3 \ 1 \ 2 \end{array}$$

$1634 \text{ p} = \underline{\pounds 16.34}$

$= 16 + \frac{34}{100} = \underline{16.34}$

26 min

# Y5

## Lesson Plan 126

### Activity

6

**PbY5b, page 126**

Q.2 Read: *Estimate the result, do the division in two ways and check with a multiplication.*

Set a time limit. Ps estimate, do the long and short divisions, check with multiplication, compare with estimate, then write the result in the horizontal division and underline it.

Review with whole class. Ps come to BB to explain reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

*Long division:*

			1	8	.	5
7	1	2	9	.	5	
-			7			
			5	9		
			-	5	6	
				3	5	
				-	3	5
						0

$$129.5 \div 7 = \underline{18.5}$$

E:  $140 \div 7 = 20$  (known multiple of 7)

or  $126 \div 7 = (70 + 56) \div 7 = 10 + 8 = 18$

*Short division:*

			1	8	.	5
7	1	2	9	.	5	
			5	3		

*Check:*

	1	8	.	5	
	$\times$	7			
	1	2	9	.	5
		5	3		

Who can explain how to divide a decimal by a natural number? T repeats in a clearer way if necessary. e.g.

'We divide a decimal by a natural number in the same way as we divide a natural number by a natural number but when we reach the decimal point in the dividend, we also mark it in the quotient.'

30 min

### Notes

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

If majority of Ps are struggling, stop individual work and continue as whole class activity.

Discussion, reasoning, agreement, checking, self-correction, praising

### Extension

(Extra work for quicker Ps.)

Do the division with fractions.

$$\begin{aligned} \text{BB: } & (129 + \frac{1}{2}) \div 7 \\ & = (70 + 56 + 3\frac{1}{2}) \div 7 \\ & = 10 + 8 + \frac{7}{2} \div 7 \\ & = 18 + \frac{1}{2} = \underline{18.5} \end{aligned}$$

7

**PbY5b, page 126, Q.3**

Read: *Estimate the result, do the division in two ways and check with a multiplication.*

What do you notice about this division? (Almost the same as Q.2 but the dividend is 1 tenth more, so estimate can be the same.)

Ps come to BB to do long division, explaining with place-value detail. Class points out errors. When Ps have calculated the tenths and have a remainder of 1, T asks what the 1 actually means. (1 tenth) We could stop here and write BB:  $129.6 \div 7 = 18.5$ , r 1 tenth

What else could we do? (Change the tenth to hundredths.) Elicit that 1 tenth = 10 hundredths, and there are no hundredths in the dividend to add on.)

Ps continue the division until there are 3 hundredths remaining. What could we do now? (Change the 3 hundredths to 30 thousandths.)

We could continue like this to the next smaller and smaller place-values until there is no remainder but we do not have time. Let's stop at the hundredths. Is it correct to say that the quotient is 18.51? (No, it is 18.51 and 3 hundredths.)

Let's do the short division and stop at the hundredths too. Ps come to BB or dictate to T, explaining reasoning with place-value detail. Class points out errors.

Ps then check result against estimate and by doing the multiplication and addition.

Whole class activity

(or individual trial first to see what Ps do with the remainder)

Drawn on BB or use enlarged copy master or OHP

At a good pace

Reasoning, agreement, praising

Discussion, agreement, praising

Ps write calculations in *Pbs* at the same time.

# Y5

## Lesson Plan 126

### Activity

7

(Continued)

*Solution:*

*Long division:*

			1	8	.	5	(1)
7	1	2	9	.	6	(0)	
-			7				
			5	9			
			-	5	6		
					3	6	
					-	3	5
							① 0
							-
							7
							③ ...

$129.6 \div 7 = 18.5$ , r 1 tenth  
 or  $129.6 \div 7 = 18.51$ , r 3 hundredths

*E:*  $140 \div 7 = 20$   
 or  $126 \div 7 = (70 + 56) \div 7 = 10 + 8 = 18$

*Short division:*

			1	8	.	5	1
7	1	2	9	.	6	0	...
			5	3	1	③	

*Check:*

			1	8	.	5	1
			×	7			
			1	2	9	.	5
						7	
						0	.
						0	3
						1	2
						9	.
						6	0
							✓

We can say that:  $129.6 \div 7$  is 18.51, r 3 hundredths,  
 or  $129.6 \div 7$  is 18.51, to the nearest 100th,  
 (as 18.51 + 3 hundredths is nearer 18.51 than 18.52)  
 or  $129.6 \div 7$  is 18.51, to 2 decimal places,  
 (as there are 2 decimal digits after the decimal point.)

Which answer is exact? ( $129.6 \div 7 = 18.51$ , r 3 hundredths)  
 Agree that the other 2 answers are approximate.

36 min

### Notes

Agree that 18.51 is more accurate than 18.5.

Agree that 3 hundredths is 0.03.

Do not expect Ps to learn this vocabulary for approximation yet – just to start to become familiar with it.

8

**PbY5b, page 126**

Q.4 Read: *Do the divisions in your exercise book. Continue each division until the result is 0.*

Deal with one row at a time. Set a time limit. Ps estimate result mentally first, then write long or short divisions in squared Ex. Bks. and check with multiplications.

Review with whole class. Ps come to BB or dictate to T, explaining reasoning with place-value details. Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

a) i) $4 \overline{) 1896}$	ii) $4 \overline{) 189.6}$	iii) $4 \overline{) 18.96}$	iv) $4 \overline{) 1.896}$
b) i) $8 \overline{) 600}$	ii) $8 \overline{) 60.0}$	iii) $8 \overline{) 6.00}$	iv) $8 \overline{) 0.600}$

### Extension

Ps say the quotients as fractions or mixed numbers (i.e. whole numbers and fractions).

40 min

Individual work, monitored, helped  
 (or do part a) i) with whole class first if Ps are unsure)  
 Written on BB or SB or OHT  
 Reasoning, agreement, self-correction, praising  
 Agree that as there are no remainders, the quotients are exact.

Feedback for T

9

**PbY5b, page 126**

Q.5 Read: *Write a plan, estimate, calculate, check and write the answer in a sentence.*

*A 2.88 m length of ribbon is cut into 3 equal parts. How long is each part?*

Set a time limit. Review with whole class. Ps could show result on scrap paper or slates on command. P answering correctly explains solution at BB. Who agrees? Who did it a different way? etc. Mistakes discussed and corrected.

T chooses a P to say the answer in a sentence.

45 min

Individual work, monitored  
 Reasoning, agreement, self-correction, praising  
 Accept any valid method.

*Solution:* e.g.

*Plan:*  $2.88 \text{ m} \div 3 \approx 1 \text{ m}$

C: 

0	9	6
3	2	8

 (m) (or change to cm first)

*Answer:* Each part is 0.96 m.

# Y5

## Lesson Plan 127

### Activity

3

#### Mean height

T puts Ps into groups and they measure their heights with a measuring tape or against a vertical scale or using a metre rule and note their heights to the nearest cm. Do this under a time limit.

T makes two tally charts, as below, one for the girls and one for the boys. Ps dictate their heights and T chooses a boy and a girl to keep a tally.

How can we work out the average height of the girls and the boys? (Add up all the heights, then divide by the number of girls or boys.)

T writes heights in a column as dictated by Ps (or Ps might suggest using multiplication for multiple tally marks). Ps add up the heights and dictate sum to T, then do long division in *Ex. Bks* (or T might allow Ps to use calculators). Ps need only calculate to 2 decimal places.

BB: e.g. Girls (and similarly for boys)

<u>Tally Chart</u>	139 cm		
139 cm	140 cm	} 280 cm	
140 cm	140 cm		
141 cm	141 cm		
142 cm	142 cm	} 426 cm	
143 cm	142 cm		
144 cm	144 cm		
144 cm	144 cm	} 720 cm	
145 cm	144 cm		
146 cm	144 cm		
147 cm	144 cm		
148 cm	145 cm	} 290 cm	
149 cm	145 cm		
150 cm	149 cm		
	+ 150 cm		
	2295 cm		

1	6	2	2	9	5	0	0	(cm)
	-	1	6					
		6	9					
		-	6	4				
			5	5				
			-	4	8			
				7	0			
				-	6	4		
					6	0		
					-	4	8	
					1	2		

Average height  $\approx$  143.4 cm  
(to nearest tenth of a cm, or mm)

Agree on the average height of the girls (boys) in the class. T shows that to be accurate to the nearest whole number, we should calculate to tenths and to be accurate to the nearest tenth we must calculate to hundredths, etc. i.e. we must calculate to the next smaller place-value column than the one we wish to stop at.

T: Who remembers the name we give to the average value in a set of data? (the mean)

e.g. Girls' heights: Mean  $\approx$  143.4 cm  
Boys' heights: Mean  $\approx$  142.9 cm

What do the mean values for boys and girls tell us? (e.g. In this class, the girls are on average taller than the boys.)

21 min

4

#### Mean ages

T divides Ps into groups of 5 or 6. Within each group, each child works out his or her age in months, then the group calculates their mean age. Discuss and agree beforehand how accurate they should be (e.g. to the nearest month or to tenths or hundredths of a month)

The groups dictate their data and mean when they have finished and T writes on BB. Class checks that they are correct (using calculators).

What can you say about the data? (e.g. Group A is on average older than Group B, or Group A is about the same age as Group C, etc.)

25 min

### Notes

Whole class activity

(The number of groups and thus the number in each group will depend on how many measuring tools are available – the more tools, the faster the data can be collected!)

BB: average height

First discuss what average means. Ps generally will have some knowledge or idea about its meaning (from home, TV, radio, newspapers, etc.) or might remember from previous work in Year 4.)

Involve several Ps in the discussion.

If all boys or all girls in class, divide the class into 2 groups.

Ps may use calculators to check the calculations.

At a fast pace

In good humour!

Agreement, praising

(as 143.43 is nearer 143.4 than 143.5)

BB: mean = average value

What is the rule for calculating the mean of a set of data?

(Add up all the values, then divide the sum by the number of values.)

Group work in collecting data and calculating the means

Monitored, helped, corrected

Whole class checking and discussion of the results.

Ps may use calculators for the addition and for checking the division.

# Y5

## Lesson Plan 127

### Activity

5

*PbY5b, page127*

Q.1 Read: *A group of 6 children weighed themselves and these were the results.*

*32.5 kg, 31.0 kg, 32.0 kg, 31.0 kg, 30.5 kg, 33 kg*

*What do they each weigh on average? Calculate the mean value to the nearest 10 g.*

How can we work out the mean? (Add up all the weights, then divide by 6.) Elicit that calculating to the nearest 10 g means to the nearest hundredth or 0.01 kg, so there should be 2 digits after the decimal point in our answer. Therefore we need to calculate as far as the thousandths column, i.e. grams.

Set a time limit or deal with one step at a time.

Review with the whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

e.g. Total weight of 6 children:	32.5
	31.0
32.5 + 31.0 + 32.0 + 31.0 + 30.5 + 33	32.0
	31.0
= 190.0 (kg)	30.5
	+ 33.0
Mean mass: 190.0 kg ÷ 6	190.0 (kg)
≈ 31.67 kg	6   31.666

	3	1	6	6	6
6	1	9	0	0	0
	1	4	4	4	④

Agree that 31.666 is nearer 31.67 than 31.66, so the answer is 31.67 kg (to the nearest 10 g, or 0.01 kg, or 2 decimal places)

T shows how the 2 calculations can be written in one line:

$$\text{Mean} = \frac{32.5 + 31.0 + 32.0 + 31.0 + 30.5 + 33}{6} = \frac{190.0}{6} \approx 31.67 \text{ (kg)}$$

### Extension

T points out (or Ps might notice) that if the division is continued to 10 thousands, 100 thousandths, etc, there will always be a remainder of 4 in each place-value column, so there will always be the digit 6 in the next place-value column in the quotient. We could go on and on to infinity without ever reaching a remainder of zero.

We call such decimals recurring decimals and to save writing the same digit lots of times, we write a dot above the decimal digit which keeps recurring. We can write the division without rounding like this (BB) and say '31.6 recurring', meaning 31.666666 . . . to infinity.

Elicit that we can round it to:

- 32, to the nearest whole number,
- 31.7, to the nearest 10th, or to 1 decimal place
- 31.67, to the nearest 100th, or to 2 decimal places
- 31.667, to the nearest 1000th, or to 3 decimal places, etc.

30 min

### Notes

Individual work, monitored, helped

or whole class activity, with Ps doing the calculations individually in Ex. Bks.

Discussion, reasoning, agreement, self-correction, praising

Show that if fractions are used instead of decimals, the answer will be completely accurate:

$$\begin{aligned} \text{BB: } 190 \div 6 &= \frac{190}{6} \\ &= 31 \frac{4}{6} \\ &= 31 \frac{2}{3} \text{ (kg)} \end{aligned}$$

Point out that  $\frac{190}{6}$  is a fraction and also a division:  $190 \div 6$

Whole class activity  
T explains and Ps listen.

BB: recurring decimal  
 $190 \div 6 = 31.\dot{6}$

Agreement, praising

Extra praise if Ps notice that:

$$31.\dot{6} = 31 + \frac{2}{3} \text{ (see above)}$$

$$\text{so } \frac{2}{3} = 0.\dot{6} \text{ and } \frac{1}{3} = 0.\dot{3}$$

**Y5***Lesson Plan 127***Activity****8***PbY5b, page127, Q.4*

- a) Read: *Find a rule and complete the table. Write the rule in different ways.*

Agree on one form of the rule in words using the given completed columns. Ps come to BB to choose a column and fill in the missing numbers, explaining reasoning. Class agrees/disagrees.

Who can write the rule in a mathematical way? Who can write it a different way? etc. Class checks the rules using values from table.

*Solution:*

<i>a</i>	1	1	3	5	2	<b>6</b>	12	2.4	<b>20</b>	<b>16</b>	5
<i>b</i>	3	4	3	2	7	4	<b>8</b>	3.6	40	10	<b>5.2</b>
<i>c</i>	2	2.5	3	3.5	<b>4.5</b>	5	10	<b>3</b>	30	13	5.1

$$\text{Rule: } c = \frac{a + b}{2}; \quad a = 2 \times c - b; \quad b = 2 \times c - a$$

(or *c* is the mean of *a* and *b*)

**Homework**

- b) Read: *In your exercise book, calculate the mean values for a, b and c.*

Set as homework and review before the start of *Lesson 128*.

(Ps might be allowed to check their calculations with calculators.)

*45 min*

**Notes**

Whole class activity

(or individual trial first if Ps wish and there is time)

Drawn on BB or use enlarged copy master or OHP

At a good pace

Discussion, reasoning, agreement, praising

**Bold** numbers are missing.

Extra praise if Ps notice that *c* is the mean of *a* and *b*, otherwise T points it out.

*Solution:*

$$\text{Mean of } a = 6.6\overline{72} \approx 6.67$$

$$\text{Mean of } b = 8.1\overline{63} \approx 8.16$$

$$\text{Mean of } c = 7.4\overline{18} \approx 7.42$$

Differentiation by time limit

Reasoning, agreement, self-correction, praising

Ask Ps which method they like best (decimal division or expressing fraction as tenths or hundredths) and why.

# Y5

## Lesson Plan 128

### Activity

9

*PbY5b, page 128, Q.4*

Read: *Write the fractions as decimals. Do the divisions in the grids.*

Ps come to BB to do the divisions, explaining reasoning with place-value detail. Some Ps might remember that thirds form recurring decimals before doing the division. If not, Ps should realise after the calculation. Ask Ps to write each result with ellipses (i.e. ...) and then as an exact decimal (i.e. with a dot above the repeating digit).

T reads part d) and Ps shout out the missing word in unison.

P comes to BB to write it, class checks spelling, then rest of Ps write it in *Pbs*.

*Solution:*

a)  $\frac{1}{3} = 0.333\dots = 0.\dot{3}$

0	3	3	3	3	...
3	1	0	0	0	0
	1	1	1	1	1

b)  $\frac{2}{3} = 0.666\dots = 0.\dot{6}$

0	6	6	6	6	...
3	2	0	0	0	0
	2	2	2	2	2

c)  $\frac{5}{6} = 0.8333\dots = 0.8\dot{3}$

0	8	3	3	3	...
6	5	0	0	0	0
	5	2	2	2	2

d) *Decimals in which the last digit is repeated endlessly are called recurring decimals.*

### Notes

Whole class activity

(or individual trial first if Ps wish and there is time)

Written on BB or use enlarged copy master or OHP

Discussion, reasoning, agreement, (self-correction), praising

### Extension

Ps round each recurring decimal to the nearest 10th, 100th, 1000th and 10 000th.

45 min

# Y5

R: Mental calculation  
 C: Practice: fractions and decimals  
 E: Converting fractions of quantities to decimals

## Lesson Plan 129

### Activity

1

#### Equal numbers

Let's join up the decimals to the equal fractions and mixed numbers. Ps come to BB to draw joining lines, explaining reasoning. Class agrees/disagrees.

BB:

5 min

### Notes

Whole class activity  
 Written on BB or use enlarged copy master or OHP  
 At a good pace  
 Reasoning, agreement, praising  
 Feedback for T

2

#### Converting fractions to decimals 1

Let's convert (i.e. change) these fractions to decimals. For each fraction, a different P comes to work on BB while rest of class works in *Ex. Bks.* Ps might remember some recurring decimals without needing to do the division. Class points out errors or suggest other methods of calculation. T or Ps check results on a calculator.

BB:

a) i)  $\frac{1}{6} = 1 \div 6 = 0.1\dot{6}$   

$$\begin{array}{r} 0.1666 \dots \\ 6 \overline{) 1.0000} \dots \\ \underline{6} \phantom{000} \\ 4000 \\ \underline{36} \phantom{00} \\ 4000 \\ \underline{36} \phantom{00} \\ 4000 \end{array}$$

ii)  $\frac{2}{6} = \frac{1}{3} = 0.3\dot{3}$   

$$\begin{array}{r} 0.3333 \dots \\ 3 \overline{) 1.0000} \dots \\ \underline{3} \phantom{000} \\ 1000 \\ \underline{9} \phantom{00} \\ 1000 \\ \underline{9} \phantom{00} \\ 1000 \end{array} \times 2$$

iii)  $\frac{3}{6} = \frac{1}{2} = 0.5$

iv)  $\frac{4}{6} = \frac{2}{3} = 0.6\dot{6}$

v)  $\frac{5}{6} = 5 \div 6 = 0.8\dot{3}$

vi)  $\frac{6}{8} = \frac{3}{4} = 0.75$

vii)  $\frac{7}{8} = 8 \div 7 = 0.875$   

$$\begin{array}{r} 0.875 \\ 8 \overline{) 7.0000} \\ \underline{56} \phantom{000} \\ 14000 \\ \underline{112} \phantom{00} \\ 28000 \\ \underline{28000} \\ 0 \end{array} \quad \text{or} \quad \begin{array}{r} 0.125 \\ \times 7 \\ \hline 0.875 \\ 1 \end{array}$$

c) i)  $\frac{1}{9} = 1 \div 9 = 0.1\dot{1}$   

$$\begin{array}{r} 0.1111 \dots \\ 9 \overline{) 1.0000} \dots \\ \underline{9} \phantom{0000} \\ 10000 \\ \underline{9000} \phantom{00} \\ 10000 \\ \underline{9000} \phantom{00} \\ 10000 \end{array}$$

ii)  $\frac{2}{9} = 2 \div 9 = 0.2\dot{2}$   

$$\begin{array}{r} 0.2222 \dots \\ 9 \overline{) 2.0000} \dots \\ \underline{18} \phantom{0000} \\ 20000 \\ \underline{18000} \phantom{00} \\ 20000 \\ \underline{18000} \phantom{00} \\ 20000 \end{array}$$

iii)  $\frac{3}{9} = \frac{1}{3} = 0.3\dot{3}$

iv)  $\frac{4}{9} = 4 \div 9 = 0.4\dot{4}$   

$$\begin{array}{r} 0.4444 \dots \\ 9 \overline{) 4.0000} \dots \\ \underline{36} \phantom{0000} \\ 40000 \\ \underline{36000} \phantom{00} \\ 40000 \\ \underline{36000} \phantom{00} \\ 40000 \end{array}$$

(Ps might know this now. If not, do the division.)

After calculating 4 ninths as a decimal, Ps might notice the pattern and deduce the remaining recurring decimals without calculation.

v)  $\frac{5}{9} = 0.5\dot{5}$  vi)  $\frac{6}{9} = 0.6\dot{6}$

vii)  $\frac{7}{9} = 0.7\dot{7}$  viii)  $\frac{8}{9} = 0.8\dot{8}$

## Lesson Plan 129

### Activity

3

#### Converting fractions to decimals 2

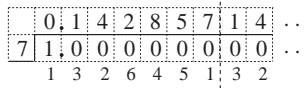

Let's convert sevenths to decimals. Do you think we could do it easily by changing the denominator to 10ths, 100th or 1000ths? (No, as they are not multiples of 7) Agree that the only way is division.

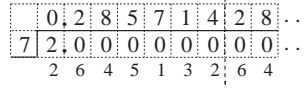

Let's continue doing the division until we get a remainder of zero, or until we know that we will keep getting the same remainder if we continue.

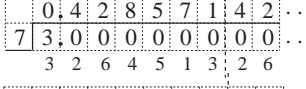

Ps come to BB to write and explain the division with place-value detail. Rest of Ps do division in *Ex. Bks* too and point out any errors made on BB.

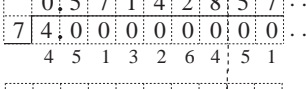

Use calculators to check the results (If possible, Ps have one each, T explains how to input the division, then Ps compare their results with the calculated quotients.) What do you notice?

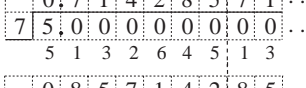

BB:

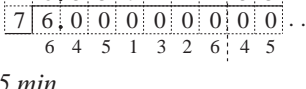

a)  $\frac{1}{7} = 1 \div 7 = 0.\dot{1}4285\dot{7} = 0.\overline{142857}$  

b)  $\frac{2}{7} = 2 \div 7 = 0.\dot{2}8571\dot{4} = 0.\overline{285714}$  

c)  $\frac{3}{7} = 3 \div 7 = 0.\dot{4}2857\dot{1} = 0.\overline{428571}$  

d)  $\frac{4}{7} = 4 \div 7 = 0.\dot{5}7142\dot{8} = 0.\overline{571428}$  

e)  $\frac{5}{7} = 5 \div 7 = 0.\dot{7}1428\dot{5} = 0.\overline{714285}$  

f)  $\frac{6}{7} = 6 \div 7 = 0.\dot{8}5714\dot{2} = 0.\overline{857142}$  

25 min

### Notes

Whole class activity

T could have grids already prepared to make it easier for Ps to do the calculations.

At a good pace

Reasoning, agreement, praising

Extra praise if Ps notice that in each case, the pattern of 6 digits will keep repeating to infinity, so the decimal is a recurring decimal.

T shows two ways of writing recurring decimals:

- with a dot above the first and last digit in the repeating group, or
- with a horizontal bar above all the digits in the group (as on some calculators).

Ps might also notice (or T points it out if they don't) that the same 6 digits appear in the same order in each decimal, and that the smallest decimal starts with the smallest digit, the next biggest decimal starts with the next biggest digit, etc.

4

#### PbY5b page 129

Q.1 Read: *Write the fractions as decimals. Do necessary calculations in your exercise book.*

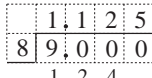

First review the different methods. (Change to an equivalent fraction with denominator 10 or 100 or 1000, or do a division until there is no remainder or until a digit or group of digits repeats itself.) Set a time limit.

Review with whole class. Ps could show results on scrap paper or slates on command. Ps answering correctly explain at BB to Ps who were wrong. Who did the same? Who worked it out a different way? etc. Mistakes discussed and corrected.

*Solution:* e.g.

a)  $\frac{3}{2} = \frac{15}{10} = \underline{1.5}$       b)  $\frac{13}{5} = \frac{26}{10} = \underline{2.6}$

c)  $\frac{6}{15} = \frac{2}{5} = \frac{4}{10} = \underline{0.4}$       d)  $\frac{13}{20} = \frac{65}{100} = \underline{0.65}$

e)  $\frac{9}{8} = 1 + \frac{1}{8} = 1 + \frac{125}{1000} = \underline{1.125}$  or 

30 min

Individual work, monitored, helped

Written on BB or SB or OHT  
Differentiation by time limit

Responses shown in unison.  
Reasoning, agreement, self-correction praising  
Accept any valid method.

a) or  $\frac{3}{2} = 1\frac{1}{2} = \underline{1.5}$

b) or  $\frac{13}{5} = 2\frac{3}{5} = 2\frac{6}{10} = \underline{2.6}$

f)  $\frac{11}{50} = \frac{22}{100} = \underline{0.22}$

## Lesson Plan 129

### Activity

5

**PbY5b, page 129, Q.2**

Read: Write the fractions as decimals. Do necessary calculations in your exercise book.

Which of these fractions are you sure forms a finite decimal and which do you think forms a recurring decimal? Let's see if you are right!

Ps come to BB to write decimals directly for those they remember, or to do divisions. T helps with long divisions, especially in b). Class agrees/disagrees and writes agreed decimals in *Pbs*.

Solution:

a)  $\frac{2}{3} = 0.\dot{6}$  (by memory)      b)  $\frac{5}{13} = 5 \div 13 = 0.\dot{3}84615$

c)  $\frac{15}{6} = \frac{5}{2} = 2\frac{1}{2} = 2.5$       d)  $\frac{7}{15} = 7 \div 15 = 0.4\dot{6}$

e)  $\frac{7}{11} = 7 \div 11 = 0.6\dot{3}$

		0	.	6	3	6	...

**PbY5b, page 129**

Q.3 Read: Without doing divisions, circle the fractions which have a finite decimal form.

We have learned that recurring decimals are not exact – the recurring digits repeat and repeat to infinity. What do you think finite decimals are? T asks several Ps what they think. (Decimals which are exact, or have a definite end point, or when the nominator of the corresponding fraction is divided by the denominator, a remainder of zero is reached eventually)

Set a time limit. Review with whole class. Ps come to BB to circle fractions or dictate which fractions T should circle, explaining reasoning. Who agrees? Who disagrees? Why?

T uncovers already prepared solution, with corresponding decimals written beside fractions. Ps correct their mistakes.

What do you notice about the uncircled fractions? (e.g. their denominators cannot be expanded to 10, 100, 1000, etc.)

Solution:

a)  $\left(\frac{7}{2}\right) (= 3\frac{1}{2} = 3.5)$

b)  $\frac{4}{3} (= 1\frac{1}{3} = 1.\dot{3})$

d)  $\left(\frac{18}{20}\right) (= \frac{9}{10} = 0.9)$

e)  $\left(\frac{12}{15}\right) (= \frac{4}{5} = \frac{8}{10} = 0.8)$

g)  $\left(\frac{15}{12}\right) (= \frac{5}{4} = 1\frac{1}{4} = 1.25)$

h)  $\left(\frac{17}{25}\right) (= \frac{68}{100} = 0.68)$

i)  $\left(\frac{80}{125}\right) (= \frac{16}{25} = \frac{64}{100} = 0.64)$

j)  $\frac{10}{225} (= \frac{2}{45} = 0.0\dot{4})$

Individual trial first, monitored  
Written on BB or SB or OHT

Initial discussion on the two types of decimals:

BB: recurring decimals  
finite decimals

Ps expand or simplify fractions as necessary in *Ex. Bks*.

Discussion, reasoning, checking, agreement, self-correction, praising

Show divisions in detail only if necessary, e.g. in f) and j).

c)  $\frac{20}{18} (= \frac{10}{9} = 1\frac{1}{9} = 1.1)$

f)  $\left(\frac{21}{16}\right) (= 1\frac{5}{16} = 1.3125)$

**Y5***Lesson Plan 129***Activity****7****PbY5b, page 129, Q.4**Read: *Fill in the missing numerators, denominators or numbers.*Ps come to BB to fill in missing numbers, explaining reasoning. Class agrees/disagrees. Ps write in *Pbs* too.

Agree that the easiest way to convert fractions to decimals is to express it as 10ths, 100ths or 1000ths, if possible.

Discuss how such times would be described in real life (not normally as decimals – more likely to be fractions).

*Solution:*

$$\text{a) } 3 \text{ minutes} = \frac{3}{60} \text{ hour} = \frac{1}{20} \text{ hour} = \frac{5}{100} \text{ hour} = 0.05 \text{ hour}$$

$$\text{b) } 15 \text{ minutes} = \frac{15}{60} \text{ hour} = \frac{1}{4} \text{ hour} = \frac{25}{100} \text{ hour} = 0.25 \text{ hour}$$

$$\text{c) } 63 \text{ minutes} = \frac{63}{60} \text{ hour} = \frac{21}{20} \text{ hour} = \frac{105}{100} \text{ hour} = 1.05 \text{ hours}$$

$$\text{d) } 6 \text{ hours} = \frac{6}{24} \text{ day} = \frac{1}{4} \text{ day} = 0.25 \text{ day}$$

$$\text{e) } 3 \text{ hours} = \frac{3}{24} \text{ day} = \frac{1}{8} \text{ day} = 0.125 \text{ day}$$

$$\text{f) } 15 \text{ hours} = \frac{15}{24} \text{ day} = \frac{5}{8} \text{ day} = 0.625 \text{ day}$$

At a good pace

Discussion, reasoning, agreement, (self-correction), praising

Extra praise if Ps notice relationships which make the calculation easier.

Feedback for T

**Y5****Lesson Plan  
130****Activity**

Calculation practice, revision, activities, consolidation  
*PbY5b, page 130*

*Solutions:*

- Q.1 a) i)  $72 \div 8 = 9$  ii)  $7.2 \div 8 = 0.9$  iii)  $0.72 \div 8 = 0.09$   
 b) i)  $49 \div 7 = 7$  ii)  $4.9 \div 7 = 0.7$  iii)  $0.49 \div 8 = 0.07$   
 c) i)  $55 \div 5 = 11$  ii)  $5.5 \div 5 = 1.1$  iii)  $0.55 \div 5 = 0.11$   
 d) i)  $63 \div 9 = 7$  ii)  $6.3 \div 9 = 0.7$  iii)  $0.063 \div 9 = 0.007$

Q.2

$$0.8 > 0.75 > 0.625 > 0.5 > 0.375 > 0.23 > 0.2 > 0.125 > 0.023$$

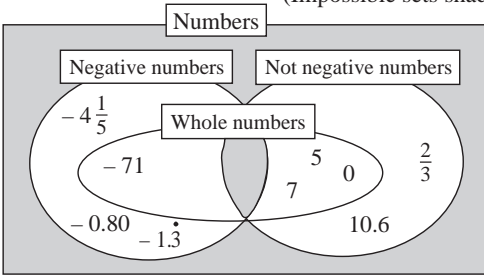

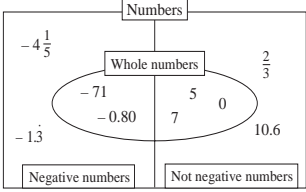

- Q.3 a)  $b = 2.35 \text{ m} \times 2 = 4.70 \text{ m} = \underline{4.7 \text{ m}}$   
 b)  $P = (4.7 \text{ m} + 2.35 \text{ m}) \times 2$   
 $= 7.05 \text{ m} \times 2 = 14.10 \text{ m} = \underline{14.1 \text{ m}}$   
 or  $P = 2.35 \text{ m} \times 6 = 14.10 \text{ m} = \underline{14.1 \text{ m}}$
- Q.4 a) 16:30 hours  $\rightarrow$   $36.9^\circ\text{C}$  17:30 hours  $\rightarrow$   $37.3^\circ\text{C}$   
 18:30 hours  $\rightarrow$   $37.7^\circ\text{C}$  19:30 hours  $\rightarrow$   $38.1^\circ\text{C}$   
 20:00 hours  $\rightarrow$   $38.3^\circ\text{C}$  (as  $t$  rises  $0.2^\circ\text{C}$  in half an hour)  
 or  $t = 36.9 + (20 - 16.5) \times 0.4 = 36.9 + 3.5 \times 0.4$   
 $= 36.9 + 0.35 \times 4$   
 $= 36.9 + 1.4 = \underline{38.3} (^\circ\text{C})$   
*Answer:* Ben's temperature at 20:00 hours was  $38.3^\circ\text{C}$ .
- b) Cost of 10 apples:  $\pounds 0.35 \times 10 = \pounds 3.50$   
 Cost of 8 pears:  $\pounds 0.70 \times 8 = \pounds 5.60$   
 Total cost:  $\pounds 9.10$   
 or  $(\pounds 0.35 \times 10) + (\pounds 0.35 \times 2 \times 8) = \pounds 3.50 + \pounds 5.60$   
 $= \underline{\pounds 9.10}$   
*Answer:* Suzy paid  $\pounds 9.10$  altogether.
- c)  $(13 \text{ m} - 2.5 \text{ m}) \div 6 = 10.5 \text{ m} \div 6 = \underline{1.75 \text{ m}}$   
*Answer:* Each piece of string was 1.75 m long.

Q.5

**Notes**

(We are assuming that the temperature rose at a steady rate.)

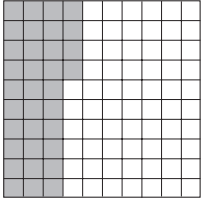

(Reducing the multiplicand and increasing the multiplier by the same number of times does not change the value of the product)

<p><b>Y5</b></p>	<p>R: Fractions                  C: <b>Ratio. Percentage. Chance or probability of certain events</b>                  E: <i>Probability as a percentage</i></p>	<p><i>Lesson Plan</i>  <b>131</b></p>
<p><b>Activity</b>  <b>1</b></p>	<p><b>Defining numbers</b>                  T writes the number 131 on the BB. Tell me different ways of describing this number <u>exactly</u> so that it could not possibly be any other number.                  (e.g. 13 tens and 1 unit; 1 hundred and 13 units; 60 less than 200; 3-digit number between 130 and 140 which has the same digit in the hundreds and units column; half of 262, etc.)                  T: We say that such examples <u>define</u> the number.                  If Ps suggest a general description such as:                  prime number; gives a remainder of 2 after division by 3; odd number, etc, T asks rest of class if the description could be applied to other numbers too and if so, Ps give examples. What additional information do we need so that the description can apply only to 131?                  (e.g. the next prime number after 127; gives a quotient of 43 and a remainder of 2 after division by 3; the next nearest odd number greater than 129, etc.)</p> <p style="text-align: right;"><i>8 min</i></p>	<p><b>Notes</b>                  Whole class activity                  Encourage creativity                  At a good pace                  Class checks the responses. 0	6	6	6	...															
3	2	0	0	0	...														
	2	4	4	4															
<p><b>3</b></p>	<p><b>PbY5b, page 132</b></p> <p>Q.1 Read: <i>Write the ratios between the shaded and white parts and the whole square.</i></p> <p>Set a time limit or deal with one at a time. More able Ps can be asked to write the ratios as fractions, decimals and percentages too.</p> <p>Review with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees Mistakes discussed and corrected. Elicit the fractions, decimals and percentages.</p> <p><i>Solution:</i></p> <p>a)  to : <math>34 : 66 = 17 : 33</math> [= <math>\frac{17}{33} = 0.51 \rightarrow 52\%</math>]</p> <p>b)  to : <math>66 : 34 = 33 : 17</math> [= <math>\frac{33}{17} = 1\frac{16}{17} \approx 1.9412 \rightarrow 194.1\%</math>]</p> <p>c)  to the whole: <math>34 : 100 = 17 : 50</math> [= <math>\frac{34}{100} = 0.34 \rightarrow 34\%</math>]</p> <p>d)  to the whole: <math>66 : 100 = 33 : 50</math> [= <math>\frac{66}{100} = 0.66 \rightarrow 66\%</math>]</p> <p style="text-align: right;">18 min</p>	<p>Individual work, monitored, helped</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>BB: </p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>T (Ps) can use a calculator to do difficult divisions.</p>																	

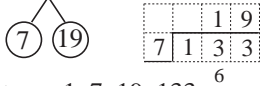

<b>Y5</b>		<i>Lesson Plan 132</i>
<b>Activity</b>  <b>4</b>	<p><b>Probability</b></p> <p>Let's consider whether these events are certain, possible but not certain, or impossible. Show me what you think when I say.</p> <p>a) <i>There will be a 29th of February in the year 2004.</i> (C) (2004 will be leap year, so will have an extra day) [Accept possible if a P reasons that the world might end before 29 February 2004!]</p> <p>b) <i>More girls than boys will be born next year.</i> (P) (Over several years, <u>on average</u>, the same number of boys as girls are born but it might not necessarily happen next year.)</p> <p>c) <i>If I throw a dice, I will get a 7.</i> (I) (A dice has only the numbers 1 to 6)</p> <p>d) <i>If I take 12 marbles from a bag containing 10 black marbles and 20 white marbles, I will have taken out at least one white marble.</i> (C) (The first 10 marbles could all be <i>black</i> but the 11th and 12th <u>must</u> be <i>white</i>, as only <i>white</i> marbles are left in the bag.)</p> <p style="text-align: right;">23 min</p>	<p style="text-align: center;"><b>Notes</b></p> <p>Whole class activity</p> <p>Ps could have probability cards on desks, or write C, P or I on slates or scrap paper and show in unison on command.</p> <p>T asks Ps with different responses to explain their reasoning. Class decides if they are correct or not.</p> <p>In good humour!</p> <p>Reasoning, agreement, praising, encouragement only</p> <p>Feedback for T</p>
<b>5</b>	<p><b>PbY5b, page 132</b></p> <p>Q.2 Read: <i>How certain of these events occurring? Write C for certain, P for possible but not certain, or I for impossible.</i></p> <p>Set a time limit. Ps write appropriate letters in the boxes.</p> <p>Review with whole class. Ps could show initial letters on scrap paper or slates, or use probability cards. Ps with different responses explain reasoning. Class decides who is correct. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) <i>The next Olympic Games will be in the year 2004.</i> (C)</p> <p>b) <i>The next next time I throw a dice I will get a 5.</i> (P)</p> <p>c) <i>The next time I throw a dice I will get a 0.</i> (I)</p> <p>d) <i>Next year, the number of boys born will be twice the number of girls</i> (P)</p> <p>a) <i>Next year, fewer boys than girls will be born.</i> (P)</p> <p style="text-align: right;">29 min</p>	<p>Individual work, monitored, (helped)</p> <p>Reasoning, agreement, self-correction, praising</p> <p>More Ps might write P in a) after the discussion in <i>Activity 4a!</i></p> <p>but very unlikely!</p>
<b>6</b>	<p><b>Problem</b></p> <p>Listen carefully, note the data and think about how you would solve this problem.</p> <p><i>In a bag of marbles, the ratio of red marbles to green marbles is 2 : 5. There are 6 red marbles in the bag.</i></p> <p>a) <i>How many green marbles are there?</i></p> <p>b) <i>How many marbles are in the bag altogether?</i></p> <p>Ps come to BB or dictate to T, explaining reasoning. Who agrees? Who thought of another way to do it? etc. T suggests some ways too.</p> <p>BB: e.g.</p> <p>a) <math>R : G = 2 : 5</math>, so <math>R = \frac{2}{5}</math> of <math>G = 6</math>, <math>G = 6 \div 2 \times 5 = \underline{15}</math></p>	<p>Whole class activity</p> <p>T repeats slowly and a P repeats in own words to give Ps time to think and write.</p> <p>Discussion, reasoning, agreement, praising</p> <p>Ps write the different plans in <i>Ex. Bks.</i></p> <p style="text-align: right;">(× 3)</p> <p>or <math>R : G = 2 : 5 = 6 : \underline{15}</math></p> <p>or Ps might draw a diagram, as below, or use algebra.</p>

<h1>Y5</h1>		<p>Lesson Plan 132</p>
<p><b>Activity</b></p> <p>6</p>	<p>(Continued)</p> <p>b) Total number of <i>red</i> and <i>green</i> marbles in the bag:</p> $R + G = 6 + 15 = \underline{21}$ <p>or <math>\frac{2}{7} \rightarrow 6</math>; <math>\frac{1}{7} \rightarrow 3</math>; <math>\frac{7}{7} \rightarrow 21</math></p> <p>So there are 21 marbles in the bag if the bag contains <u>only red</u> and <u>green</u> marbles – but there could be other colours too!</p> <p style="text-align: right;">35 min</p>	<p style="text-align: center;"><b>Notes</b></p> <p>or</p> <p>BB: <math>\begin{array}{c c} \textcircled{R} \textcircled{R} &amp; \textcircled{G} \textcircled{G} \textcircled{G} \textcircled{G} \textcircled{G} \\ \textcircled{R} \textcircled{R} &amp; \textcircled{G} \textcircled{G} \textcircled{G} \textcircled{G} \textcircled{G} \\ \textcircled{R} \textcircled{R} &amp; \textcircled{G} \textcircled{G} \textcircled{G} \textcircled{G} \textcircled{G} \end{array}</math></p> <p style="text-align: center;">6                      15 Total: 21</p> <p>Extra praise if Ps think of this.</p>
<p>7</p>	<p><b>PbY5b, page 132</b></p> <p>Q.3 Read: <i>A group of children is visiting a museum. In the group, there are 12 girls and the ratio of girls to boys is 3 to 2.</i></p> <p>Set a time limit for a) to c). Ps read questions themselves, and solve them. Ps may calculate in <i>Ex. Bks.</i> if they need more room.</p> <p>Review with whole class. Ps come to BB or dictate what T should write, explaining reasoning. Who agrees? Who thinks something else? etc. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) <i>How many boys are in the group?</i>  <math>G : B = 3 : 2 = 12 : \underline{8}</math>          (or <math>G = \frac{3}{2}</math> of <math>B = 12</math>; <math>B = 12 \div 3 \times 2 = \underline{8}</math>)</p> <p>b) <i>How many children are in the group?</i>          No. of children: <math>8 + 12 = \underline{20}</math></p> <p>c) <i>If the children enter the museum in a random order, underline the outcome which you think is more likely to occur.</i>          i) <u>A boy enters first.</u> ii) <u>A girl enters first.</u>          (As there are more girls than boys.)</p> <p>d) <i>What do you think is the probability of each of the outcomes in c) occurring?</i>          Elicit/tell Ps that <u>probability</u> means chance. If an outcome is <u>impossible</u> and has no chance of happening, what do you think its probability is? (0) (BB)          If an outcome is <u>certain</u> to happen, what do you think its probability is? (1, as 4 chances out of 4, or 10 chances out of 10, or 100 chances out of 100, etc. is equivalent to 1) (BB)          If an outcome is <u>possible but not certain</u>, how could we write its probability? Ps come to BB or dictate inequality to T.          What kind of numbers are more than 0 and less than 1? (fractions or decimals)          Let's write the probability of each of these outcomes.</p> <p>i) <i>A boy enters first.</i> <math>p = 8 \text{ chances out of } 20 = \frac{8}{20} = \frac{2}{5}</math></p> <p>ii) <i>A girl enters first.</i> <math>p = 12 \text{ chances out of } 20 = \frac{12}{20} = \frac{3}{5}</math></p> <p style="text-align: right;">41 min</p>	<p>a) to c) as individual work, monitored, helped</p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>or</p> <p>b) <math>\frac{3}{2} \rightarrow 12</math></p> <p><math>\frac{1}{2} \rightarrow 4</math></p> <p><math>\frac{2}{2} \rightarrow \underline{8}</math></p> <p>Whole class activity</p> <p>Discussion, reasoning, agreement, praising</p> <p>BB: <u>probability</u> (<math>p</math>)          (chance)</p> <p><u>Impossible</u>: <math>p = 0</math></p> <p><u>Certain</u>: <math>p = 1</math></p> <p><u>Possible</u>: <math>0 &lt; p &lt; 1</math></p> <p>Elicit that the more (less) chance there is, the nearer the probability is to 1 (0).</p> <p>Ps come to BB or dictate to T, explaining reasoning</p> <p>Rest of Ps write fractions in <i>Pbs.</i></p> <p>Reasoning, agreement, praising</p>

<b>Y5</b>		<i>Lesson Plan 132</i>
<b>Activity</b>  <b>8</b>	<p><i>PbY5b, page 132, Q.4</i></p> <p>Read: <i>In a bag there are 50 marbles altogether. The marbles are either black or white. The ratio of black marbles to white marbles is 1 : 4.</i></p> <p>a) <i>How many marbles are there of each colour?</i></p> <p>How many:</p> <p>i) <i>black marbles are there? Show me . . . now! (10)</i></p> <p>(1 out of 5 or <math>\frac{1}{5}</math> is black. <math>\frac{1}{5}</math> of 50 = <math>50 \div 5 = 10</math>)</p> <p>ii) <i>white marbles are there? Show me . . . now! (40)</i></p> <p>(4 out of 5 or <math>\frac{4}{5}</math> are white. <math>\frac{4}{5}</math> of 50 = <math>50 \div 5 \times 4 = 40</math>)</p> <p>b) <i>If you take a marble out of the bag with your eyes shut, what is the probability that it will be white?</i></p> <p>Show me . . . now! (<math>\frac{4}{5}</math>)</p> <p>(40 chances out of 50, so 4 chances out of 5)</p> <p>Elicit the probability as a percentage too.</p> <p>BB: <math>P = \frac{4}{5} = \frac{40}{50} = \frac{80}{100} \rightarrow 80\%</math></p> <p style="text-align: right;"><i>45 min</i></p>	<p style="text-align: center;"><b>Notes</b></p> <p>Whole class activity but individual calculation (or individual trial first if Ps prefer)</p> <p>Responses shown on scrap paper or slates in unison, Ps with different answers explain reasoning to class. Class decides who is correct.</p> <p>Agree that the ratio BB: B : W = 1 : 4 means that out of every 5 marbles, 1 will be <i>black</i> and 4 will be <i>white</i>; i.e. the no. of <i>black</i> marbles is <u>1 quarter</u> of the number of <i>white</i> marbles but is <u>1 fifth</u> of the <u>total</u> number of marbles.</p> <p>Ps write agreed results in <i>Pbs</i>.</p> <p>Praising</p>

<h1>Y5</h1>	R: Fractions, ratio C: <b>Combinatorics, chance, probability</b> E: <i>Percentage. Frequency, relative frequency</i>	<h2>Lesson Plan</h2> <h1>133</h1>
<b>Activity</b>  <b>1</b>	<p><b>Numbers</b></p> <p>T writes the number <u>133</u> on BB.</p> <p>b) Let's factorise 133.</p> <p>What does factorise mean? (To break down a number into its prime factors.) What is a factor of a number? (A number which divides into that number exactly) What is a prime factor? (A factor which is a prime number, i.e. is exactly divisible only by itself and 1)</p> <p>How can we factorise 133? (e.g. 133 is an odd number, so has no even prime factors; there is no 5 or 0 in the units column, so 5 is not a prime factor. Divide by 3, 7, etc. in turn to see if there is a remainder. We do not need to go past 11, as <math>11 \times 12 = 132</math>)</p> <p>T points out that factors are <u>whole</u> numbers, so we do not continue the division beyond the units column. Elicit or remind Ps that <u>every</u> number has the factors 1 and the number itself.</p> <p>b) Let's <u>define</u> this number. (i.e. describe it <u>exactly</u>)</p> <p>Ps dictate definitions and class checks that they are correct and that the description is unique to 133.</p> <p>(e.g. the 67th positive odd number; <math>111 \times 3 - 200</math>; 1 third of 399; 50% of 266; 133% of 100; 266% of 50; <math>\frac{1}{10}</math> of 1330; <math>100 \times 1.33</math>, etc.)</p> <p style="text-align: right;">8 min</p>	<p style="text-align: center;"><b>Notes</b></p> <p>Whole class activity</p> <p>Quick revision of how to factorise.</p> <p>Discussion, reasoning, agreement, praising</p> <p>Ps tell their ideas. T gives hints if Ps have forgotten how to factorise numbers.</p> <p>BB: <math>\boxed{133} = 7 \times 19</math></p>  <p>Factors: 1, 7, 19, 133<sup>6</sup></p> <p>At a good pace</p> <p>Encourage creativity</p> <p>Extra praise for unexpected but correct definitions</p>
<b>2</b>	<p><b>Ratio</b></p> <p>In this box are 3 <i>black</i> pencils, 1 <i>red</i> pencil and 4 <i>green</i> pencils. Let's write different ratios about the pencils.</p> <p>Ps come to BB or dictate what T should write. Class agrees/disagrees. T asks Ps to give the ratios in other forms too.</p> <p>BB: e.g.</p> <p>Ratio of: <math>B : R = 3 : 1</math> (= 3 times <math>\rightarrow</math> 300%)</p> $B : G = 3 : 4 \left( = \frac{3}{4} = \frac{75}{100} \rightarrow 75\% \right)$ $R : B = 1 : 3 \left( = \frac{1}{3} \rightarrow 33\frac{1}{3}\% = 33.3\% \approx 33\% \right)$ $R : G = 1 : 4 \left( = \frac{1}{4} = \frac{25}{100} \rightarrow 25\% \right)$ $G : B = 4 : 3 \left( = \frac{4}{3} = 1\frac{1}{3} \rightarrow 133\frac{1}{3}\% = 133.3\% \approx 133\% \right)$ $G : R = 4 : 1 \left( = 4 \text{ times } \rightarrow 400\% \right)$ <p>or, e.g. <math>B : (R \text{ or } G) = 3 : 5 \left( = \frac{3}{5} = \frac{60}{100} \rightarrow 60\% \right)</math></p> $(R \text{ or } G) : B = 5 : 3 \left( = \frac{5}{3} = 1\frac{2}{3} \rightarrow 166\frac{2}{3}\% = 166.6\% \approx 167\% \right)$ <p>etc</p> <p>or, e.g. <math>B : \text{All pencils} = 3 : 8 \left( = \frac{3}{8} = \frac{375}{1000} \rightarrow 37.5\% \right)</math></p> $R : \text{All pencils} = 1 : 8 \left( = \frac{1}{8} = \frac{125}{1000} \rightarrow 12.5\% \right), \text{ etc.}$ <p style="text-align: right;">18 min</p>	<p>Whole class activity</p> <p>T has real pencils to show.</p> <p>At a good pace</p> <p>Encourage logical listing.</p> <p>T could start each new type if Ps do not suggest it and Ps dictate the other similar ratios.</p> <p>Reasoning, agreement, praising</p> <p>Ps can work out recurring decimals and percentages with a calculator.</p> <p>or, e.g.</p> $(B \text{ or } R) : \text{All} = 4 : 8$ $\left( = \frac{4}{8} = \frac{1}{2} = 50\% \right)$ $(B \text{ or } G) : \text{All} = 7 : 8$ $\left( = \frac{7}{8} = \frac{875}{1000} = 87.5\% \right)$ <p>or <math>B : R : G = 3 : 1 : 4</math></p> <p>Agree that a 3-part ratio cannot be given as a fraction, decimal or percentage.</p>

**Y5***Lesson Plan 133***Activity****3****Possible outcomes: tossing a coin**

If I toss this coin, how many possible outcomes could there be?

Ps come to front of class to toss the coin a few times.

What different outcomes did you see? (The coin landed Head up, or the coin landed Tail up.)

Did anyone's coin land on its edge? (No) Is it possible for a coin to land on its edge? T asks several Ps what they think. Class might agree that you can imagine it happening but in practice it does not happen unless the coin lands leaning against something, which does not count.

Let's assume that tossing a coin always gives either a Head or a Tail, so there are 2 possible outcomes.

What chance do you think these outcomes have? Do they have an equal or unequal chance of happening? Agree that if a normal coin is used, H or T has an equal chance of occurring. (Some Ps might know of biased or unfair coins, which are weighted so that they land more often on one side than on the other.)

T: When we toss a coin, we assume that it is a normal (unbiased or fair) coin and has only 2 possible outcomes, H or T, and each outcome has an equal chance of happening.

*22 min***Notes**

Whole class activity

If possible, Ps have coins to toss on desks too.

Discussion, agreement, praising

BB:

2 possible outcomes: H or T

BB:

unbiased coin → fair

biased coin → unfair

(Some Ps might not agree with the T about this!)

**4****PbY5b, page 133**

Q.1 Read: *Predict the result for each outcome first, then do the experiment. Toss a coin 20 times and note how it lands in this table.*

Elicit/explain what a prediction means. (If you toss the coin 20 times, how many times do you think it will land on a Head and how many times do you think it will land on a Tail?)

Ps fill in their predictions first, then do the experiment, making a tally mark in either the Heads row or the Tails row for each toss. Keep class together on the 20 tosses.

Then Ps count their totals and check that they add up to 20.

e.g.

Outcome	Prediction		Tosses																	Totals	
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19		20
Head	10																				9
Tail	10																				11

Read: *What fraction of your tosses resulted in:*

a) a Head      b) a Tail?

Ps write fractions in *Pbs*, then T asks some Ps to report on their experiment and to compare their predictions with what actually happened. Agree that the 2 fractions should add up to 1.

Let's collect the data from everyone and write it in this table. How many Ps are in the class? (e.g. 25) If each pupil tossed the coin 20 times, how many tosses were there altogether? (e.g.  $25 \times 50 = 500$ ) Ps fill in appropriate column in table.

T quickly asks each P in turn to say their totals for Heads and Tails and writes it on BB. Ps keep a running total in *Ex. Bks.* (or use a calculator). After checking that the two totals add up to the total number of tosses, Ps write class totals in table in *Pbs*.

Individual prediction and experiment, monitored, (helped)

Tables drawn on BB or use enlarged copy master or OHP

T might ask some Ps for their predictions. (Accept unequal predictions too but say that we will wait for the results of the experiment to see who is correct.)

At a fast pace

P finished first could write his or her data on table on BB.

Individual work, monitored

e.g. Head:  $\frac{9}{20}$  Tail:  $\frac{11}{20}$

Discussion, reasoning, agreement, praising

Whole class activity

T works on BB, Ps in *Pbs*.

(If totals do not add up correctly, T in good humour says that some one has made a mistake and adjusts the figures appropriately.)

# Y5

## Lesson Plan 133

### Activity

4

(Continued)

We call the total number of times a Head was tossed its frequency.

What is the ratio of the frequency of a Head (Tail) to the total number of throws? Ps come to BB or dictate to T.

(e.g. No. of Heads : No. of tosses = 252 : 500

No. of Tails : No. of tosses = 248 : 500

We call this ratio the relative frequency. It means how frequently a Head or Tail was thrown compared with (relative to) the total number of throws.

Write the ratio or relative frequency in the table in your *Pbs* as a fraction and as a percentage. (Ps may use calculators to work out the percentages.)

[If necessary, calculate the percentages with the whole class, eliciting each step. (Divide the numerator by the denominator, then multiply by 100.).

BB: e.g.  $\frac{252}{500} = 252 \div 500 = 2.52 \div 5 = 0.504 = \underline{50.4\%}$

$\frac{248}{500} = 248 \div 500 = 248 \div 5 = 0.496 = \underline{49.6\%}$

Review completed table with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected. What do you notice? (Percentages are almost equal.)

BB: e.g.

Outcome	Number of tosses	Totals (frequency)	Ratio (relative frequency)	
			fraction	percentage
Head	500	252	$\frac{252}{500}$	50.4%
Tail		248	$\frac{248}{500}$	49.6%

Read: *What do you think is the **probability** of tossing:*

a) a Head b) a Tail?

Ps could show on scrap paper or slates on command. Ps with different answers explain reasoning. Class decides who is correct. Ps write agreed fractions in *Pbs*.

(There are only 2 possible outcomes, H or T, and assuming that the coin is unbiased, each outcome will have an equal chance of occurring. So each will have a probability of 1 chance out of 2 or 1 half or 50%.)

If some Ps' individual data and the class data do not match this probability, T points out that the more times the experiment is done, the closer the actual data will get to the calculated probability.

[T might mention that after lots of such experiments using Euros, it was found that the coins were biased, as the relative frequencies of the two sides were never equal!]

32 min

### Notes

BB: frequency

BB: relative frequency

Whether or not Ps use calculators depends on the difficulty of the division.

(Remind Ps that reducing the dividend and divisor by the same number of times does not change the quotient.)

0	5	0	4	0	4	9	6				
5	2	5	2	0	5	2	4	8	0		
2				2				2 4 3			

Discussion, reasoning, agreement, (self-correction), praising

(Ps who disagreed before might now agree that throwing a Head and throwing a Tail have an equal chance of happening.)

Reasoning, agreement, praising

BB:

Probability of:

a) Head:  $\frac{1}{2}$  b) Tail:  $\frac{1}{2}$

(If possible, use a computer simulation of tossing coins now, or in *Lesson 135*, to show that the more times a coin is tossed, the nearer the actual outcomes are to the predicted probability.)

# Y5

## Lesson Plan 133

### Activity

5

#### Possible outcomes: throwing a dice

If we throw a dice, what possible outcomes could there be?

Let's try it! Ps throw a dice several times (on desks and/or at front of class). What different outcomes did you see? (The dice landed showing 1, 2, 3, 4, 5 or 6 facing up.)

Did anyone's dice land on an edge or vertex? (No) Is it possible for a dice to land on an edge or vertex? T asks several Ps what they think. Class might agree that you can imagine it happening but in practice it does not happen unless the dice lands leaning against something, which does not count.

Let's assume that a dice always lands with 1, 2, 3, 4, 5 or a 6 facing up, so there are 6 possible outcomes.

What chance do you think these outcomes have? Do they have an equal or unequal chance of happening? Elicit that as a dice is usually a cube and is symmetrical, each of the numbers should have an equal chance of being thrown.

T: When we throw a dice, we assume that it is a normal (unbiased or fair) dice and has 6 possible outcomes, 1, 2, 3, 4, 5 or 6, and each outcome has an equal chance of occurring.

35 min

### Notes

Whole class activity

If possible, Ps have dice on desks too.

Discussion, agreement, praising

BB: Dice

6 outcomes: 1, 2, 3, 4, 5 or 6

(Again, some Ps might not agree because of their experience of board games where throwing a 6 is required to start or finish, or because they have used an unfair dice.)

6

#### PbY5b, page 133

Q.2 Read: *Predict the results for each outcome first, then do the experiment. Throw a dice 20 times and note how it lands in this table.*

Ps make predictions (checking that they add up to 20) and throw a dice 20 times. If possible, keep Ps together at each throw. Ps check that they have made 20 tally marks altogether.

Then Ps write totals in frequency column in table and calculate the ratios (relative frequencies) as fractions and percentages.

P finished first could write his or her results in table on BB.

T asks some Ps to report their results to class and to compare their actual results with their predictions.

e.g.

Prediction Outcome	Tally of 20 throws	Totals (frequency)	Ratio (relative frequency)	
			fraction	percentage
 2		4	$\frac{4}{20}$	20%
 4		3	$\frac{3}{20}$	15%
 3		3	$\frac{3}{20}$	15%
 3		3	$\frac{3}{20}$	15%
 4		3	$\frac{3}{20}$	15%
 4		4	$\frac{4}{20}$	20%
(20)		(20)	( $\frac{20}{20}$ )	(100%)

Read: *Collect the class data and fill in this table.*

First agree on total number of throws. (e.g. if 25 Ps in class, and 20 throws each, then number of throws:  $25 \times 20 = 500$ )

Ps dictate their results for each outcome and T writes on BB.

Ps keep count in *Ex. Bks* and/or T chooses Ps to keep a running total for each outcome on a calculator as a check. After checking that the 6 totals add up to 500, Ps write agreed frequencies in class data table on BB and in *Pbs*.

Individual work, closely monitored, helped, corrected  
Tables drawn on BB or use enlarged copy master or OHP  
At a fast pace

Calculations can be done in *Ex Bks*. or Ps may use a calculator for the percentages. T helps where necessary.

Elicit that relative frequency is the ratio of the number of times a certain number is thrown (frequency) compared with (relative to) the total number of throws.

BB:  $\frac{4}{20} = \frac{20}{100} \rightarrow 20\%$ , etc.

Praising, encouragement only

Whole class activity

T writes in table on BB and Ps write in *Pbs*.

Deal with one outcome at a time.

At a fast pace.

In good humour!

## Y5

## Lesson Plan 133

## Activity

6

(Continued)

Calculate the ratios (relative frequencies) as fractions and percentages with the whole class. Ps come to BB or dictate what T should write, explaining reasoning. Class agrees/disagrees. Check on a calculator. Ps fill in table in *Pbs* too. e.g.

BB:

Outcome	Number of throws	Totals (frequency)	Ratio (relative frequency)	
			fraction	percentage
	500	81	$\frac{81}{500}$	16.2%
		85	$\frac{85}{500}$	17.0%
		82	$\frac{83}{500}$	16.4%
		84	$\frac{84}{500}$	16.8%
		83	$\frac{83}{500}$	16.6%
		85	$\frac{85}{500}$	17.0%

(500)      ( $\frac{500}{500}$ )      (100%)

What do you notice about the percentages in this table compared with your table? (They are closer together.) Why do you think that is so? (We have collected lots more data.)

Read: *What do you think is the probability of throwing a: 1, 2, 3, 4, 5 or 6?*

Ps write fractions in *Pbs*. **A**, what did you write for each one? Why? Who agrees? Elicit that each number has a probability of 1 sixth. (6 possible outcomes, each with an equal chance of happening, so each outcome has a probability of 1 sixth.)

Read: *Divide 100% by 6. What does it have to do with the experiment?*

Ps do the division in *Ex. Bks*. T gives them time to consider the question, then asks several Ps what they think. e.g.

BB:  $100\% \div 6 = 16\frac{2}{3}\% = 16.\dot{6}\%$  and  $\frac{1}{6} \rightarrow 16.\dot{6}\%$

which is the chance of each outcome. Agree that the percentages in the table are all very close to  $16.\dot{6}\%$ .

Why do you think that the ratios from our experiment are not exactly  $16.\dot{6}\%$  or  $\frac{1}{6}$ ? (We still do not have enough data – we need to do the experiment thousands of times.)

T: The more times we throw the dice, the closer the actual outcomes will be to the outcomes we expect.

## Notes

Elicit that to change a fraction into a percentage, express it as 100ths if possible, or divide the numerator by the denominator and multiply by 100.

If percentages are difficult because of the number of Ps in the class, use a calculator.

Reasoning agreement, praising

At a good pace

Ps check that the total for each column is correct.

Discussion, agreement

Or Ps write fraction on scrap paper or slates and show in unison on command.

Discussion, reasoning, agreement, praising

If Ps do not see the connection, T points it out.

(1 out of 6 times is the same as 16 and 2 thirds times out of 100.)

If possible, T shows a computer simulation of throwing a dice in *Lesson 135*.

45 min

<h1 style="text-align: center;">Y5</h1>	<p>R: Fractions, ratio                  C: <b>Combinatorics. Chance or probability. Experiments</b>                  E: Percentages. Frequency. Relative frequency</p>	<h2 style="margin: 0;">Lesson Plan</h2> <h1 style="margin: 0;">134</h1>

Reasoning, agreement, praising</p> <p>(as <math>5 + 2 + 3 = 10</math>, and 10 times <u>2</u> is 20)</p> <p>Responses written on scrap paper or slates and shown in unison.                  Ps answering correctly explain reasoning to Ps who were wrong.                  Accept any correct form but elicit the simplification and percentage if no P has shown them.                  Also ask <i>yellow or pink</i> (same as 'not blue'), etc. and <i>blue or yellow or pink</i>.</p> <p><math>(\frac{20}{20} = \frac{10}{10} = 1 \rightarrow 100\%)</math>  <u>Certain</u> to happen!</p>

# Y5

## Lesson Plan 134

### Activity

3

**PbY5b, page 134**

Q.1 Read: *Four children tossed a coin several times and wrote their results in this table. Write the answer to each question in the appropriate part of the table.*

Deal with one part at a time or set a time limit. Ps do necessary calculations in *Ex. Bks* and write results in *Pbs*.

Review with whole class. Ps could show results on scrap paper or slates on command. Ps answering correctly come to BB to fill in table and explain reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

a) *How many tosses were there altogether?*

$$\text{BB: } (24 + 30 + 27 + 20) + (25 + 28 + 31 + 15) = 101 + 99 = \underline{200}$$

b) *How many: i) Heads ii) Tails were tossed altogether?*

i) No of Heads: 101 ii) No of Tails: 99

c) *What is the ratio of each outcome to the total number of tosses:*

i) *as a fraction*    H : All =  $\frac{101}{200}$ ;    T : All =  $\frac{99}{200}$

ii) *as a decimal*

$$\text{H : All} = \frac{101}{200} = 101 \div 200 = 1.01 \div 2 = \underline{0.505}$$

$$\text{T : All} = \frac{99}{200} = 99 \div 200 = 0.99 \div 2 = \underline{0.495}$$

iii) *as a percentage?*

$$\text{H : All} = 0.505 \rightarrow \underline{50.5\%}$$

$$\text{T : All} = 0.495 \rightarrow \underline{49.5\%}$$

Completed table:

Outcome	Alan	Becky	Carol	David	Totals frequency	Ratio relative frequency		
						fraction	decimal	percentage
Head	24	30	27		<b>101</b>	$\frac{101}{200}$	<b>0.505</b>	<b>50.5%</b>
Tail	25	28	31	15	<b>99</b>	$\frac{99}{200}$	<b>0.495</b>	<b>49.5%</b>
<b>Total tosses</b>					<b>200</b>			

### Notes

Individual work, monitored, helped

(or whole class activity in calculating the decimals and percentages)

Table drawn on BB or use enlarged copy master or OHP

Ps might be allowed to use calculators in c) ii) if they wish.

Discussion, reasoning, agreement, self-correction, praising

Feedback for T

$$\begin{array}{r} 0.505 \\ 2 \overline{) 1.010} \\ \underline{10} \phantom{0} \\ 10 \phantom{0} \\ \underline{10} \phantom{0} \\ 0 \phantom{0} \end{array}$$

$$\begin{array}{r} 0.495 \\ 2 \overline{) 0.990} \\ \underline{08} \phantom{0} \\ 19 \phantom{0} \\ \underline{18} \phantom{0} \\ 10 \phantom{0} \\ \underline{09} \phantom{0} \\ 10 \phantom{0} \end{array}$$

### Extension

What chance would you give of tossing a Head (Tail)? ( $\frac{1}{2}$  for each, as there are 2 possible outcomes, each with an equal chance of happening)

Which child's outcomes are closest to this prediction? Why?

[Alan, as he threw a coin 49 times, and 24 H and 25 T are each very close to half of 49 which is 24.5; or

Ratio of: a Head:  $\frac{24}{49} \approx 0.49 \rightarrow 49\%$ ; a Tail:  $\frac{25}{49} \approx 0.51 \rightarrow 51\%$

and both are very close to 50%, which is what we would expect; or difference between no. of Heads and no. of Tails is smallest for Alan and we would predict that there should be no difference at all.]

Whole class activity

T asks several Ps what they think and why.

(or Ps could show initial letters of children's names on slates in unison)

Reasoning, agreement, praising  
Who agrees? Who can think of another way to explain it?

Praising, encouragement only

22 min

#### Possible outcomes

Ps have 3 different coins (real or toy) on desks, e.g. 10 p, 50 p and £1 coins.

- a) What different outcomes are possible if we toss 2 different coins (e.g. 10 p and £1) at the same time? Ps toss the coins several times and note the outcomes in *Ex. Bks.*

Let's list all the different outcomes you found in this table. Ps come to BB or dictate to T. Class agrees/disagrees or points out any missed. Encourage a logical listing.

Elicit that there are 4 possible outcomes.

BB: 

10p	£1
-----	----

#### Outcome

H	H
H	T
T	H
T	T

How many outcomes give:

- a) 2 Heads (1)  
 b) a Head and a Tail (2)  
 c) 2 Tails? (1)

- b) What different outcomes are possible if we toss 3 coins at the same time? Ps toss the coins several times and note the outcomes in *Ex. Bks.*

Let's list all the different outcomes in this table. BB:

#### Outcome

10p	50p	£1
-----	-----	----

Ps come to BB or dictate to T. Class agrees/disagrees or points out any missed. Encourage a logical listing,

Elicit that there are 8 possible outcomes.

How many outcomes give:

- a) 3 Heads (1)  
 b) 2 Heads and a Tail (3)  
 b) a Tail and 2 Heads (3)  
 c) 3 Tails? (1)

27 min

### Notes

Whole class activity

(If all Ps having coins on desks is not possible, T asks several Ps to come to front of class to toss the coins.)

Tables drawn on BB or use enlarged copy master or OHP

At a good pace

Agreement, praising

*Check:* 1 + 2 + 1 = 4 ✓

Use any 3 different coins

Allow a set time for tossing and praise Ps who did the most tosses in the given time.

*Check:* 1 + 3 + 3 + 1 = 8 ✓

5

#### PbY5b, page 134

Q.2 Read: *Predict the result for each outcome first, then do the experiment.*

*Toss a 10 p coin and a £1 coin at the same time.*

*Repeat the experiment 24 times and keep a tally of how they land in this table.*

Ps write predictions. T asks several Ps what they predicted.

If possible, keep Ps together on the tosses. Ps count their tally marks and write the frequency for each outcome in their table. P finished first could write his or her data in the table on BB.

T chooses some Ps to report their data to the class and to compare their actual data with their predictions.

Read: *Collect the data for the class and complete the right hand side of the table.*

First agree on total number of tosses. (e.g. if 30 Ps in class, and 24 throws each, then number of throws:  $24 \times 30 = 720$ )

Ps dictate their results for each outcome and T writes on BB, while Ps keep a running total for each outcome in *Ex. Bks.*

Individual work, closely monitored, helped, corrected  
 Table drawn on BB or use enlarged copy master or OHP  
 Ps check that their predictions add up to 24.

At a fast pace

Ask Ps the reason for their predictions. Extra praise if they give a logical reasoning (4 possible outcomes, each with an equal chance, etc.)

Whole class activity

At a fast pace

4 Ps also keep running totals on calculators.

# Y5

## Lesson Plan 134

### Activity

5

(Continued)

After checking that the 4 totals add up to 720, T and Ps write the frequencies in class data part of the table (T on BB and Ps in *Pbs*).

Calculate the ratios (relative frequencies) as fractions and percentages with the whole class. Ps come to BB or dictate what T should write. Class agrees/disagrees. Ps fill in tables in *Pbs*.

BB: e.g.

e.g. In a class of 30 pupils

Outcome			Totals frequency		Ratio relative frequency			
(0p)	(5p)	(1)	Pupil	Class	fraction	decimal	%	
Tally of 24 throws								
H H	5		7	185	$\frac{185}{720}$	≈ 0.26	26%	
H T	6		5	176	$\frac{176}{720}$	≈ 0.24	24%	
T H	5		6	181	$\frac{181}{720}$	≈ 0.25	25%	
T T	8		6	178	$\frac{178}{720}$	≈ 0.25	25%	
Prediction			Total throws		720	$(\frac{720}{720})$	(1)	(100%)

Elicit that the probability of each outcome is 1 quarter (as 4 possible outcomes, each with an equal chance of happening.)

What do you notice about the percentages in the table? (All very close together, and each is almost 25%, which equals 1 quarter.)

Why does it not match up exactly? (Not enough data – we need to do the experiment thousands of times.)

What was the ratio of throwing 1H + 1T in any order?

BB: Ratio of (1H + 1T) :  $\frac{176 + 181}{720} = \frac{357}{720} \approx 0.496 \rightarrow 49.6\%$

36 min

### Notes

Ps use calculators to work out the decimals or T could set some calculations as individual work in *Ex.Bks* and check Ps' results with a calculator.

Reasoning agreement, praising

At a good pace

Ps check that the total for each column is correct.

Discussion, agreement, praising

BB:  $\frac{1}{4} = 0.25 \rightarrow 25\%$

[T could show computer simulation in *Lesson 135*.]

Discussion, reasoning, agreement, praising

Elicit all 3 forms.

### Extension

6

### PbY5b, page 134

Q.3 Read: *Repeat the experiment using 3 coins.*

Ps make predictions, throw 3 different coins 24 times, keep a tally of outcomes in table in *Pbs*, write totals in Pupil column and check that they add up to 24. P finished first writes own data on table on BB.

Collect the class data (with 8 Ps keeping count of each outcome on calculators) and check that they total 720. Ps write totals in table in *Pbs*.

Calculate the ratios as fractions, decimals and percentages with the whole class. (Ps may use calculators for the decimals.)

T writes agreed ratio on BB and Ps write it in *Pbs*. e.g.

e.g. In a class of 30 pupils

Outcome			Totals frequency		Ratio relative frequency			
(0p)	(5p)	(1)	Pupil	Class	fraction	decimal	%	
Tally of 24 throws								
H H H	3		4	88	$\frac{88}{720}$	≈ 0.122	12.2%	
H H T	3		2	89	$\frac{89}{720}$	≈ 0.124	12.4%	
H T H	3		3	91	$\frac{91}{720}$	≈ 0.126	12.6%	
H T T	3		3	90	$\frac{90}{720}$	≈ 0.125	12.5%	
T H H	3		2	88	$\frac{88}{720}$	≈ 0.122	12.2%	
T H T	3		5	92	$\frac{92}{720}$	≈ 0.128	12.8%	
T T H	3		2	90	$\frac{90}{720}$	≈ 0.125	12.5%	
T T T	3		3	92	$\frac{92}{720}$	≈ 0.128	12.8%	
Prediction			Total throws		720	$(\frac{720}{720})$	(1)	(100%)

Individual work, monitored, helped, corrected

Table drawn on BB or use enlarged copy master or OHP

Some Ps report their data and compare with their predictions.

Whole class collection of class data and calculation of ratios.

Reasoning, agreement, checking totals, praising

Elicit the expected probability and compare with actual data.

BB:  $\frac{1}{8} = 0.125 \rightarrow 12.5\%$

Agree that % ratios in the table are very close to this.

### Extension

What is the probability of throwing 1H + 2T in any order?

$(\frac{1}{8} + \frac{1}{8} + \frac{1}{8} = \frac{3}{8} \rightarrow 37.5\%)$

45min

**Y5***Lesson Plan*  
**135****Activity****Notes**

Revision, activities, consolidation  
(Use computer programs to simulate tossing coins and throwing dice.)

**PbY5b, page 135**

*Solutions:*

Q.1 a)  $B : W = 6 : 10$       b)  $W : B = 10 : 6$

c) i)  $W : \frac{10}{16} = \frac{5}{8}$       ii)  $B : \frac{6}{16} = \frac{3}{8}$

Q.2 a) I (but accept P from Ps who do not know that the World Cup in football is held every 4 years)

b) C      c) P      d) I      e) P

Q.3 a) No. of *red* marbles:  $\frac{1}{4}$  of 40 =  $40 \div 4 = 10$

No. of *blue* marbles:  $\frac{3}{4}$  of 40 =  $40 \div 4 \times 3 = 30$

or  $40 - 10 = 30$

b) i)  $p(\text{blue}) = \frac{3}{4}$       i)  $p(\text{not blue}) = 1 - \frac{3}{4} = \frac{1}{4}$

Q.4 Ratio of *red : blue : yellow* is 3 : 2 : 1

a)  $p(\text{red}) = \frac{3}{6} = \frac{1}{2}$  (= 0.5 = 50%)

b)  $p(\text{blue}) = \frac{2}{6} = \frac{1}{3}$  (= 0.3  $\approx$  33.3%)

c)  $p(\text{yellow}) = \frac{1}{6}$  (= 0.16  $\approx$  16.7%)

d)  $p(\text{not red}) = 1 - \frac{1}{2} = \frac{1}{2}$  (= 0.5 = 50%)

or  $= \frac{2}{6} + \frac{1}{6} = \frac{3}{6} = \frac{1}{2}$

 E: Frequency, relative frequency

## Lesson Plan 136

### Activity

1

#### Factorisation

a) Let's factorise 136 and list all its positive factors. Ps come to BB or dictate to T. Class agrees/ disagrees.

BB:  $136 = 2 \times 2 \times 2 \times 17$  (prime factors)

All positive factors:  
1, 2, 4, 8, 17, 34, 68, 136

b) Let's define the number 136.

Ps dictate definitions and class checks that they are correct and that the description is unique to 136.

(e.g.  $8 \times 17$ ; 80% of 170;  $\frac{17}{100}$  of 800;  $-64 + 200$ , etc.)

8 min

### Notes

Whole class activity

Ps draw factor tree on BB if necessary, but praise other reasoning too.

(e.g. 2 is a factor as 136 is even; 5 is not a factor as there is no 5 or zero in units column, etc.)

At a good pace

Agreement, praising

Extra praise for creativity!

2

#### Problem 1

Listen carefully, note the data and think how you would work out the answer. Do it in your *Ex. Bks* if you have time.

There are 36 marbles in a box. Some are *blue*, some are *yellow* and some are *pink*. The ratio of *blue* to *yellow* to *pink* marbles is 8 : 6 : 4.

a) How many marbles of each colour are in the box?

Who thinks that they know how to do it? P comes to BB to show solution and explain reasoning. Who agrees? Who would do it another way? etc. After agreement, T chooses a P to say the answer in a sentence.

BB: e.g.  $B : Y : P = 8 : 6 : 4 = 16 : 12 : 8$  ( $\times 2$ )

or show in a table:

B	8	4	16
Y	6	3	12
P	4	2	8
Total	18	9	36

↑ ( $\times 4$ )

or  $B = \frac{8}{18}$  of 36 = 16;  $Y = \frac{6}{18}$  of 36 = 12;  $P = \frac{4}{18}$  of 36 = 8

Answer: There are 16 *blue* marbles, 12 *yellow* marbles and 8 *pink* marbles in the box.

b) Show me the answers to these questions as fractions when I say.

If you take a marble out of the box with your eyes closed, what is the probability of the marble being:

i) *blue* ( $\frac{16}{36} = \frac{4}{9}$ )      ii) *yellow* ( $\frac{12}{36} = \frac{1}{3}$ )

iii) *pink* ( $\frac{8}{36} = \frac{2}{9}$ )      iv) not blue ( $\frac{20}{36} = \frac{5}{9}$ ) or  $1 - \frac{4}{9} = \frac{5}{9}$

iv) not yellow ( $\frac{24}{36} = \frac{2}{3}$ )      v) not pink ( $\frac{28}{36} = \frac{7}{9}$ )

or  $1 - \frac{1}{3} = \frac{2}{3}$       or  $1 - \frac{2}{9} = \frac{7}{9}$

14 min

Whole class activity

T repeats slowly and chooses a P to repeat in own words to give Ps time to think and calculate.

Ps tell class their ideas.

Reasoning, agreement, praising

(as  $8 + 6 + 4 = 18$ , and 18 times 2 is 36)

(as  $\frac{1}{18}$  of 36 = 2)

Responses shown on scrap paper or slates in unison.

At a fast pace

Ps answering correctly explain to Ps who were wrong.

Reasoning, agreement, praising

Extra praise if Ps give decimals and percentages too.

Feedback for T

# Y5

## Lesson Plan 136

### Activity

3

#### Possible outcomes: 2 dice

Ps have 2 different coloured dice on desks, e.g. 1 *white* and 1 *red*.

- a) *What different outcomes are possible if we throw 2 dice at the same time?*

Ps throw the dice several times and note the outcomes.

Let's list all the different possible outcomes in these tables. Ps come to BB or dictate to T. Class agrees/disagrees or points out any missed. Encourage a logical listing, as shown.

BB:

<i>white</i>	<i>red</i>	<i>white</i>	<i>red</i>	<i>white</i>	<i>red</i>	<i>white</i>	<i>red</i>	<i>white</i>	<i>red</i>	<i>white</i>	<i>red</i>	<i>white</i>	<i>red</i>
1	1	2	1	3	1	4	1	5	1	6	1		
1	2	2	2	3	2	4	2	5	2	6	2		
1	3	2	3	3	3	4	3	5	3	6	3		
1	4	2	4	3	4	4	4	5	4	6	4		
1	5	2	5	3	5	4	5	5	5	6	5		
1	6	2	6	3	6	4	6	5	6	6	6		

Elicit that there are 36 possible outcomes. (For each of the 6 possible numbers on the *white* dice there are 6 possible numbers on the *red* dice, i.e.  $6 \times 6 = \underline{36}$  possible outcomes.)

- a) How many outcomes give:
- i) two 4s (1)      ii) one 2 and one 4 (2)
  - iii) one 1 and one 6 (2)      iv) two 1s (1)
  - v) at least one 5? (11)

- b) *What chance (probability) would you give to each of these outcomes?*

Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. T shows Ps the notation for writing the probability of a certain outcome.

BB:

- i)  $p(\text{two } 4\text{s}) = \frac{1}{36}$  (as 1 chance out of 36)
- ii)  $p(\text{one } 2 \text{ and one } 4) = \frac{2}{36} = \frac{1}{18}$  (as 2 chances out of 36)
- iii)  $p(\text{one } 1 \text{ and one } 6) = \frac{2}{36} = \frac{1}{18}$  (as 2 chances out of 36)
- iv)  $p(\text{two } 1\text{s}) = \frac{1}{36}$  (as 1 chance out of 36)
- v)  $p(\text{at least one } 5) = \frac{11}{36}$  (as 11 chances out of 36)

21 min

### Notes

Whole class activity

If all Ps having dice on desks is not possible, T asks several Ps to come to front of class to demonstrate.

Tables drawn on BB or use enlarged copy maser or OHP

At a good pace

Agreement, praising

Discussion, reasoning, agreement, praising

Ps shout out in unison.

Agreement, praising

Reasoning, agreement, praising

Point out that notation for probability is a lower case 'p' (a capital 'P' is used for 'perimeter').

Ps write probabilities in *Ex. Bks.* too.

Feedback for T

<b>Prediction</b> (72)				<b>Total throws</b> (72)		1440	$(\frac{1440}{1440})$	(1)	(100%)

45 min

### Notes

Although Ps might find it rather tedious to toss the dice 72 times and then to collect and calculate so much class data, they should complete the experiment to give them direct experience of what is involved (and to appreciate how much help a computer programme can be).

Encourage Ps to be 'good scientists' and to collect and record the data accurately, otherwise the experiment will not be worth doing!

**Y5**

R: Graphs  
 C: **Frequency tables and graphs. Probability**  
 E: *Relative frequency*

## Lesson Plan 137

**Activity****1****Numbers**

Let's define the number 137.

Ps dictate their definitions. Class agrees/disagrees. T could give some definitions too (some incorrect) and ask Ps if they are correct.

e.g. It is a prime number greater than 131 and less than 139;  $140 - 3$ ;  $11 \times 11 + 16$ ; 1 third of 411; 137% of 100;  $1H + 37U$ ;  $1.37 \times 100$ ; etc.

*6 min***Notes**

Whole class activity

At a good pace

In good humour!

Checking, agreement, praising

Extra praise for creativity!

**2****Displaying outcomes**

Study this bar chart. What do you think it shows?

BB:

(Labels for the axes added after discussion)

Elicit/tell that the bar chart shows the results obtained after throwing a dice several times. The horizontal axis shows the different *outcomes* and the vertical axis shows how many times they occurred (*frequency*).

How many times was the dice thrown? ( $6 + 5 + 7 + 4 + 4 + 4 = \underline{30}$ )

Let's write the data in the table. Ps come to BB or dictate what T should write, using a calculator to work out the relative frequencies as percentages. (Divide numerator by denominator and multiply by 100). (Change recurring decimals in percentages to fractions so that the relative frequencies are exact and will add up to 100% – it is easier to compare with the probability as a %) Class points out errors.

Are the frequencies in the table what we would expect? T asks several Ps what they think and why. e.g.

[BB: Probability of each outcome:  $\frac{1}{6}$  (as 1 chance out of 6)

so we would expect that out of 30 throws, each outcome would occur ( $30 \div 6 = \underline{5}$ ) times and only the '2' was thrown 5 times.]

Show me the answer to these questions about the actual data when I say.

a) i) What is the *frequency* of an even number? ( $5 + 4 + 4 = \underline{13}$ )

ii) What is the *relative frequency*? ( $\frac{13}{30}$ ) [or  $43\frac{1}{3}\%$ ]

Are they what you would expect? (No, we would expect :

*frequency*:  $5 + 5 + 5 = \underline{15}$ ; *relative frequency*: 1 half or 50%)

b) i) What is the *frequency* of a number  $> 2$ ? ( $7 + 4 + 4 + 4 = \underline{19}$ )

ii) What is the *relative frequency*? ( $\frac{19}{30}$ ) [or  $63\frac{1}{3}\%$ ]

Are they what you would expect? (No, we would expect:

*frequency*:  $5 + 5 + 5 + 5 = \underline{20}$ ; *relative frequency*: 2 thirds or  $66\frac{2}{3}\%$ )

*14 min*

Whole class activity

Drawn on BB or use enlarged copy master or OHP

Table completed later (see below)

Discussion, agreement, praising

T writes agreed labels on bar chart.

Reasoning, agreement, praising

At a good pace

(e.g.  $\frac{5}{30} = \frac{1}{6} = 0.1\dot{6}$

$\rightarrow 16.\dot{6}\% = 16\frac{2}{3}\%$ )

T helps with reasoning if necessary.

Agreement, praising

(but the others are quite close)

Responses written on scrap paper or slates and shown in unison.

Ps answering correctly explain to Ps who were wrong.

Because in:

a) ii):

$$p(\text{even number}) = \frac{15}{30} = \frac{1}{2}$$

b) ii):

$$p(\text{number} > 2) = \frac{20}{30} = \frac{2}{3}$$

**Y5***Lesson Plan 137***Activity****3****PbY5b, page 137**

Q.1 Read: A dice was thrown 60 times. The number of times (**frequency**) each of the numbers 1 to 6 (**outcome**) was thrown is shown in the chart below.

Complete the table and answer the questions.

Talk about the chart and table first to make sure that Ps understand what to do. Set a time limit. Ps read data from the chart and write in correct places in the table.

Review and correct any mistakes in table before allowing Ps to answer the questions. If necessary, calculate the percentages with the whole class (using calculators).

Set another time limit for answering the questions, or deal with one question at a time and Ps show results on scrap paper or slates on command. Ps answering correctly explain at BB to Ps who were wrong. Mistakes discussed and corrected.

*Solution:*

Frequency

Outcome	1	2	3	4	5	6	
Frequency	9	12	10	11	8	10	
Ratio relative frequency	$\frac{a}{b}$	$\frac{9}{60}$	$\frac{12}{60}$	$\frac{10}{60}$	$\frac{11}{60}$	$\frac{8}{60}$	$\frac{10}{60}$
	%	15%	20%	$16\frac{2}{3}\%$	$18\frac{1}{3}\%$	$13\frac{1}{3}\%$	$16\frac{2}{3}\%$

a) Which outcome occurred:

- i) most frequently (throwing a 2)  
ii) least frequently? (throwing a 5)

b) Which frequency exactly fits the expected frequency for each outcome?

(Expected frequency: 1 sixth of 60 = 10)

c) What was the frequency of the outcome 'less than 6'?

( $9 + 12 + 10 + 11 + 8 = \underline{50}$ )

[Relative frequency:  $\frac{50}{60} = \frac{5}{6} \rightarrow 83\frac{1}{3}\%$ ]

d) What was the frequency of the outcome 'odd'?

(Frequency:  $9 + 10 + 8 = \underline{27}$ )

[Relative frequency:  $\frac{27}{60} = \frac{9}{20} \rightarrow 45\%$ ]

**Notes**

Individual work, monitored, helped

Drawn on BB or use enlarged copy master or OHP

Discussion, reasoning, agreement, self-correction, praising

Reasoning, agreement, self-correction, praising

(Changing to percentages makes comparison with the probability easier and using fractions rather than decimals in the percentages ensures that the relative frequencies add up to 100%.)

b) 3 and a 6 were thrown 10 times.

c) Elicit that this equals the expected frequency and relative frequency.

d) Expected frequency:

$10 + 10 + 10 = \underline{30}$

Expected relative frequency:

$\frac{30}{60} = \frac{1}{2} \rightarrow 50\%$

22 min

# Y5

## Lesson Plan 137

### Activity

4

*PbY5b, page137*

Q.2 Read: *Two coins were tossed 60 times. The frequency of each outcome is shown in the table.*

- a) Complete the chart.
- b) Calculate the ratio for each outcome and complete the table.
- c) What is the frequency of tossing a Head **and** a Tail?

What does the chart have to do with the table? Ps come to BB to explain to class. T helps where necessary.

Deal with one part at a time or set a time limit. More able Ps could also be asked to give the ratios as percentages.

Review with whole class. Ps come to BB to draw horizontal lines on the chart and to write the ratios in the table, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

### Extension

In c), compare the actual outcome with the expected outcome.

*Solution:*

a)

Outcome ①②	Frequency	Ratio <i>relative frequency</i>
H H	14	$\frac{14}{60}$ ( $\approx 23.3\%$ )
H T	15	$\frac{15}{60}$ (25%)
T H	16	$\frac{16}{60}$ ( $\approx 26.7\%$ )
T T	15	$\frac{15}{60}$ (25%)

b)

c) Frequency of a Head and a Tail:  $15 + 16 = 31$

Relative frequency:  $\frac{31}{60} \rightarrow \approx 51.7\%$

Expected probability:  $p(1H + 1T) = \frac{2}{4} = \frac{1}{2} \rightarrow 50\%$ ,

so the actual outcome is very close to what we would expect.

32 min

### Notes

Individual work, monitored closely, helped  
 Drawn on BB or use enlarged copy master or OHP

Initial discussion to make sure that Ps understand what to do. Elicit that the horizontal line already drawn in the chart is not long enough and needs to be extended.

(Ps may use calculators to work out the percentages.)

Discussion, reasoning, agreement, self-correction, praising

Extension done as a whole class activity, with Ps saying what to do first and how to continue.

Praising, encouragement only

5

### Fortune wheel

Ideally, T acts as a fortune teller and chooses Ps to come to front of class to spin the wheel. (T could have brief fortunes prepared for each number. e.g. 1: 'you will be happy'; 2: 'you will not be rich'; 3: 'you will have a secret admirer' ; etc. or Ps could make them up beforehand.)

If the pointer comes to rest on a diagonal, the P must spin the wheel again.

How many possible outcomes are there? (8) What chance would you give to each number? T asks several Ps what they think. Extra praise if Ps give each of them an equal chance.

Let's see if you are right! Ps come to front of class to spin the wheel 40 times and rest of class keep a tally for each number in *Ex Bks*. Agree on the totals, then write in the table. Then Ps calculate the relative frequencies as fractions, decimals and percentages, using calculators where necessary. Compare the actual with the expected outcomes.

Whole class activity

Wheel made from card (can use copy master) and pinned to BB so that it can turn.

Pointer stuck or drawn on BB.

BB:

At a fast pace

In good humour!

Discussion, reasoning, agreement, praising

# Y5

## Lesson Plan 137

### Activity

5

(Continued)

BB:

e.g.

Outcome	1	2	3	4	5	6	7	8	
Frequency	4	5	3	6	5	6	5	6	
Ratio relative frequency	fraction	$\frac{4}{40}$	$\frac{5}{40}$	$\frac{3}{40}$	$\frac{6}{40}$	$\frac{5}{40}$	$\frac{6}{40}$	$\frac{5}{40}$	$\frac{6}{40}$
	decimal	0.1	0.125	0.075	0.15	0.125	0.15	0.125	0.15
	%	10%	12.5%	7.5%	15%	12.5%	15%	12.5%	15%

Agree that if the wheel is fair (unbiased) :

BB: probability for each outcome is:  $\frac{1}{8} = 0.125 \rightarrow 12.5\%$

### Extension

If we assume that the wheel is unbiased, what probability would you give to these outcomes? (Ps could show on slates on command.)

What is the probability of the pointer resting on:

- a) an odd number?                      b) a number less than 6?

$$\left(\frac{4}{8} = \frac{1}{2} = 0.5 \rightarrow 50\%\right)$$

$$\left(\frac{5}{8} = 0.625 \rightarrow 62.5\%\right)$$

40 min

### Notes

Discussion on the data compared with what is expected and what the reasons could be for an outcome not matching the expected probability.

(Unfair, i.e unbalanced or weighted wheel, or if quite close, not enough data.)

[T could show a computer simulation for large number of spins in *Lesson 140*.]

Reasoning, agreement, praising

6

**PbY5b, page 137**

Q.3 Read: *A fortune teller spins her lucky colour wheel 100 times. Complete the table.*

Set a time limit. Ps can use calculators for the decimals and %.

Review with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.

*Solution:*

Outcome	pink	blue	white	green	pink or blue	p or w or g	
Frequency	26	23	25	26	49	77	
Ratio relative frequency	fraction	$\frac{26}{100}$	$\frac{23}{100}$	$\frac{25}{100}$	$\frac{26}{100}$	$\frac{49}{100}$	$\frac{77}{100}$
	decimal	0.26	0.23	0.25	0.26	0.49	0.77
	%	26%	23%	25%	26%	49%	77%

Individual work, monitored, helped  
Table drawn on BB or use enlarged copy master or OHP  
Differentiation by time limit.  
If no P reaches the last two columns, do them with the whole class.

Reasoning, agreement, self-correction, praising

Feedback for T

Whole class activity  
Ps come to BB or dictate what T should write. Class agrees/disagrees.

Discussion, reasoning, agreement, praising

In good humour!  
Praising

### Extension

Let's compare the actual outcomes with the expected probability.

Elicit that if the wheel is unbiased, each outcome has an equal chance, so the probability for:

- each colour is:  $\frac{1}{4} = 0.25 \rightarrow 25\%$
- pink or blue is:  $\frac{2}{4} = \frac{1}{2} = 0.5 \rightarrow 50\%$
- pink or white or green:  $\frac{3}{4} = 0.75 \rightarrow 75\%$

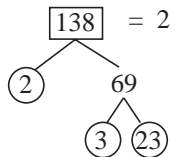

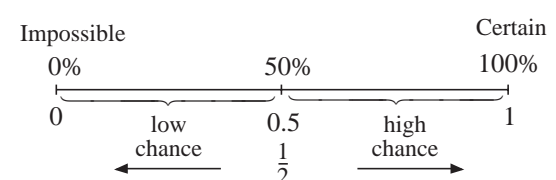

Tell me an outcome which would have a probability of 1 (0).

e.g.  $p(\text{green or pink or white or blue}) = 1$  (Certain to happen)

$p(\text{yellow}) = 0$  (Impossible!)

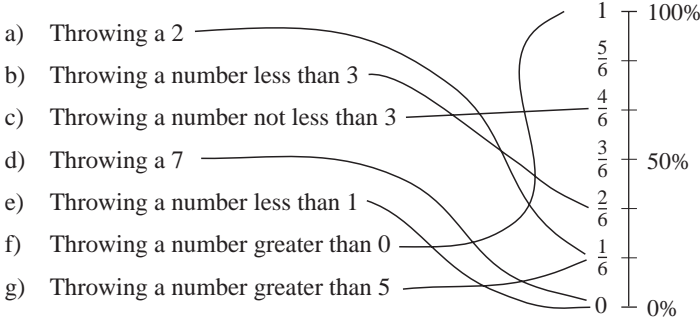

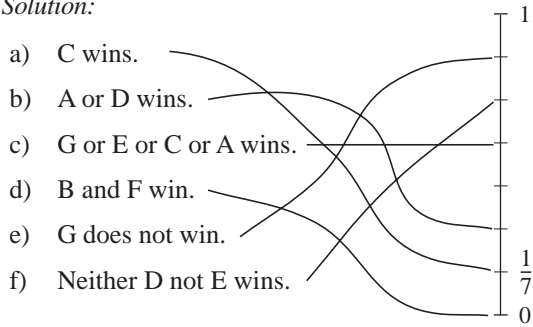

45 min

<p><b>Y5</b></p>	<p>R: Fractions, ratio                  C: <b>Frequency, relative frequency</b>                  E: <i>Probability scale</i></p>	<p><i>Lesson Plan</i>  <b>138</b></p>
<p><b>Activity</b>  <b>1</b></p>	<p><b>Numbers</b></p> <p>a) Let's <u>factorise</u> 138 and list all its positive factors. Ps come to BB or dictate to T. Class agrees/ disagrees.</p> <p>BB: <math>138 = 2 \times 3 \times 23</math> (prime factors)</p>  <p>All positive factors:                  1, 2, 3, 6, 23, 46, 69, 138</p> <p>b) Let's <u>define</u> the number 138.                  Ps dictate definitions and class checks that they are correct and that the description is unique to 138.                  (e.g. <math>6 \times 23</math>; 138% of 100; <math>13.8 \times 10</math>; <math>-12 + 150</math>, <math>690 \div 5</math>; etc.)</p> <p style="text-align: right;"><i>8 min</i></p>	<p><b>Notes</b></p> <p>Whole class activity                  Ps draw factor tree on BB but praise other reasoning too.                  (e.g. 2 is a factor as 138 is even; 5 is not a factor as no 5 or zero in units column, etc.)</p> <p>At a good pace                  Agreement, praising                  Extra praise for creativity!</p>
<p><b>2</b></p>	<p><b>Probability scale</b></p> <p>On the radio one morning during the weather forecast, the presenter made these remarks. What did he mean?</p> <p>a) <i>There is a 50% chance of rain in the South-West.</i>                  (There is an equal chance of it raining as not raining.)                  What other way could you say it? (e.g. half-in-half chance, or fifty-fifty chance, or even chance)</p> <p>b) <i>There is a 20% chance of rain in the South-East.</i>                  (Rain is possible but is rather unlikely.)</p> <p>c) <i>There is an 80% chance of rain in the North.</i>                  (It is very likely to rain, but it is not certain.)</p> <p>Have you ever heard of a 0% chance of rain, or a 100% chance of rain?                  (No, as a 0% chance means that it is <u>impossible</u> for it to rain and a 100% chance means that it is <u>certain</u> to rain – but we cannot control the weather!)</p> <p>Let's draw a probability scale. T draws a horizontal line on the BB and Ps draw one in <i>Ex. Bks</i>. What should we mark on it? (0 at one end and 1 at the other) Should we extend the line below zero and beyond 1? (No, as a probability cannot be less than zero, or more than 1.) What other mark could we make on it? (Half-way mark, where the probabilities of not happening and happening are equal.)</p> <p>Elicit what each part of the probability scale actually means and that the greater the probability, the more chance something has of happening.</p> <p>BB:</p>  <p>Ask Ps to think of examples from real life and to show where they would be on the probability scale. (T should also have some in mind in case Ps cannot think of any.) Class agrees/disagrees.</p> <p style="text-align: right;"><i>16 min</i></p>	<p>Whole class activity                  Discussion involving as many Ps as possible                  Elicit alternative statements: e.g.</p> <p>a) There is a 50% chance of no rain in the South-West.                  b) There is an 80% chance of no rain in the South-East.                  c) There is a 20% chance of no rain in the North.</p> <p>Agreement, praising</p> <p>T works on BB and Ps work in <i>Ex. Bks</i>.</p> <p>While Ps are suggesting examples, T quickly checks all Ps' probability scales, correcting where necessary.</p> <p>Extra praise for clever examples.</p>

<b>Y5</b>		<i>Lesson Plan 138</i>
<b>Activity</b>  <b>3</b>	<p><b>Probability game</b></p> <p>Let's play a game. Everyone stand up! I will say a probability as a ratio or a fraction or a decimal or a percentage and you must show me what it means with actions. e.g.</p> <p>If you think it is:</p> <ul style="list-style-type: none"> <li>• <u>certain</u>, raise both arms above your head</li> <li>• <u>likely</u> but not certain, hold your ears</li> <li>• <u>as equally likely as unlikely</u>, bow</li> <li>• <u>unlikely</u> but possible, fold your arms</li> <li>• <u>impossible</u>, sit down.</li> </ul> <p>T says a probability, then says, 'Show me . . . now!' Ps with different responses explain reasoning and class decides which response is correct. e.g.</p> <p><math>\frac{1}{10}</math> (unlikely), <math>\frac{70}{100}</math> (likely), 1 (certain), 0.26 (unlikely), 85% (likely), 0% (impossible), 50% (equally likely as unlikely), etc.</p> <p style="text-align: right;">22 min</p>	<p style="text-align: center;"><b>Notes</b></p> <p>Whole class activity</p> <p>Ps could chooses the actions.</p> <p>T might have actions written on BB as a reminder, or Ps have a short practice first.</p> <p>At speed, in good humour!</p> <p>Actions done in unison.</p> <p>Praising, encouragement only</p> <p>If problems or disagreement, Ps show on probability scale.</p> <p>Ps could say some probabilities too!</p> <p>Feedback for T</p>
<b>4</b>	<p><b>Tossing a coin</b></p> <p>If we toss an unbiased coin, how many different outcomes are there? (2) What are they? (a head or a tail) Which is more likely? (They each have an equal chance, or are equally likely.)</p> <p>I will say an outcome and you must show me (on scrap paper or slates) what you think its probability is when I say. e.g.</p> <p>a) We toss a Head. <math>(\frac{1}{2}</math> or 0.5 or 50%)</p> <p>b) We toss a Head <u>or</u> a Tail. (1 or 100%) [Certain]</p> <p>c) We toss neither a Head <u>nor</u> a Tail. (0 or 0%) [Impossible]</p> <p>d) We toss a Head <u>and</u> a Tail. (0 or 0%) [Impossible]</p> <p>e) We toss a tail. <math>(\frac{1}{2}</math> or 0.5 or 50%)</p> <p style="text-align: right;">27 min</p>	<p>Whole class activity</p> <p>Responses shown in unison.</p> <p>Demonstrate and/or show on probability scale if necessary.</p> <p>Elicit the other forms too.</p> <p>T (Ps) writes each on BB in a mathematical way. e.g.</p> <p>a) <math>p(H) = \frac{1}{2} = 0.5 \rightarrow 50\%</math></p> <p>b) <math>p(H \text{ or } T) = 1 \rightarrow 100\%</math></p> <p>c) <math>p(H \text{ nor } T) = 0 \rightarrow 0\%</math></p> <p>etc.</p>
<b>5</b>	<p><b>PbY5b, page 137</b></p> <p>Q.1 Read: <i>When we throw an unbiased dice, there are 6 possible outcomes, each equally likely: 1, 2, 3, 4, 5, or 6.</i></p> <p><i>Show the probabilitiy of each of these outcomes by joining it to the correct point on the probability scale.</i></p> <p>Elicit that the vertical probability scale ranges from 0 to 1 and is divided into 6 equal parts, with a tick at every sixth.</p> <p>Set a time limit or deal with one at a time. Advise Ps to find the correct point on the scale first then join it to the matching question, rather than the other way round, as it is more accurate.</p> <p>Review with whole class. Ps come to BB or dictate to T, explaining reasoning. Class agrees/disagrees. Mistakes discussed and corrected.</p>	<p>Individual work, monitored, helped</p> <p>Written on BB or use enlarged copy master or OHP</p> <p>Differentiation by time limit and extension work.</p> <p>Discussion, reasoning, agreement, self-correction, praising</p>

Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <ul style="list-style-type: none"> <li>a) C wins.</li> <li>b) A or D wins.</li> <li>c) G or E or C or A wins.</li> <li>d) B and F win.</li> <li>e) G does not win.</li> <li>f) Neither D nor E wins.</li> </ul>  <p>T reviews, then Ps repeat in unison.</p> <p>When we have 7 possible outcomes, each with equal probability, the sum of their probabilities is the <u>certain</u> outcome, 1.</p> <p style="text-align: right;">38 min</p>	<p>Individual work, monitored, helped</p> <p>Written on BB or use enlarged copy master or OHP</p> <p>Use names of Ps in class if possible.</p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>Show details on BB:</p> <ul style="list-style-type: none"> <li>a) 1 chance out of 7: <math>\frac{1}{7}</math></li> <li>b) <math>\frac{1}{7} + \frac{1}{7} = \frac{2}{7}</math></li> <li>c) <math>\frac{1}{7} + \frac{1}{7} + \frac{1}{7} + \frac{1}{7} = \frac{4}{7}</math></li> <li>d) Impossible, as only one winner!</li> <li>e) <math>1 - \frac{1}{7} = \frac{6}{7}</math></li> <li>f) <math>1 - \frac{2}{7} = \frac{5}{7}</math></li> </ul>

Y5

Lesson Plan 138

## Activity

7

**PbY5b, page 138, Q.3**

Read: *Let's suppose that when the fortune teller spins her lucky number wheel, any of the numbers has an equal chance of coming to rest in front of the arrow.*

*Also, the wheel has been fixed so that it cannot stop with the arrow pointing to a line between two numbers.*

*What is the probability of these outcomes happening?*

What can you tell me about this wheel? (Divided into 20 equal parts; labelled with the numbers 1 to 20 in a random order.)

Deal with one part at a time. T reads the outcome and Ps show its probability on scrap paper or slates on command. Ps with different responses explain reasoning to class. Class decides who is correct. Ps write agreed fraction in *Pbs*. Elicit decimals and percentages too if no P has shown them.

*Solution:*

The number is:

- |                                |                       |  |
|--------------------------------|-----------------------|--|
| a) 17                          | $(\frac{1}{20})$      | $[= \frac{5}{100} = 0.05 \rightarrow 5\%]$                 |
| b) less than 17                | $(\frac{16}{20})$     | $[= \frac{4}{5} = \frac{80}{100} = 0.80 \rightarrow 80\%]$ |
| c) <b>not</b> greater than 17  | $(\frac{17}{20})$     | $[= \frac{85}{100} = 0.85 \rightarrow 85\%]$               |
| d) <b>not</b> less than 17     | $(\frac{4}{20})$      | $[= \frac{1}{5} = \frac{20}{100} = 0.20 \rightarrow 20\%]$ |
| e) even                        | $(\frac{10}{20})$     | $[= \frac{1}{2} = 0.5 \rightarrow 50\%]$                   |
| f) divisible by 4              | $(\frac{5}{20})$      | $[= \frac{1}{4} = \frac{25}{100} = 0.25 \rightarrow 25\%]$ |
| g) <b>not</b> divisible by 4   | $(\frac{15}{20})$     | $[= \frac{3}{4} = \frac{75}{100} = 0.75 \rightarrow 75\%]$ |
| h) either even <b>or</b> odd   | $(\frac{20}{20} = 1)$ | $[ \rightarrow 100\% ]$ Certain!                           |
| i) neither even <b>nor</b> odd | $(\frac{0}{20} = 0)$  | $[ \rightarrow 0\% ]$ Impossible!                          |

**Extension**

Which outcomes are likely but not certain to happen? [ b), c) and g)]

T reviews:

When we have 20 possible outcomes, each with equal probability, the sum of their probabilities is the certain outcome, 1.

45 min

**Notes**

Whole class activity  
(or individual trial first if Ps wish and there is time, monitored, helped)  
Drawn on BB or use enlarged copy master or OHP

BB:

Responses shown in unison.  
Discussion, reasoning, agreement, (self-correction), praising

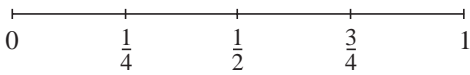

Elicit the possible numbers:

- b) 1 to 16
- c) 1 to 17
- d) 17, 18, 19, 20
- e) 2, 4, 6, 8, 10, 12, 14, 16, 18, 20
- f) 4, 8, 12, 16, 20
- g) 1, 2, 3, 5, 6, 7, 9, 10, 11, 13, 14, 15, 17, 18, 19
- h) 1 to 20 (All)
- i) none

Extra praise if a P notices that the probabilities of f) and g) sum to 1.

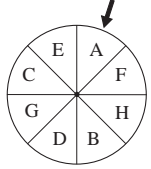

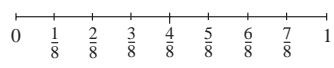

Agreement, praising

Ps repeat in unison.

<h1>Y5</h1>	<p>R: Ratio, percentage  C: <b>Probability scale. Experiments and calculations</b>  E: <i>Problems. Combinatorics</i></p>	<h2>Lesson Plan 139</h2>
<p><b>Activity</b></p> <p><b>1</b></p>	<p><b>Numbers</b></p> <p>a) Let's factorise <u>139</u> and list its positive factors.  Ps try the prime numbers in increasing order, explaining reasoning with logic, as below. Class agrees/disagrees.</p> <ul style="list-style-type: none"> <li>• <u>2</u> is not a prime factor, as 139 is odd</li> <li>• <u>3</u> is not a factor, as <math>139 = 120 + 19</math>, and 19 is not a multiple of 3</li> <li>• <u>5</u> is not a factor, as units digit is not 5 or 0.</li> <li>• <u>7</u> is not a factor, as <math>139 = 140 - 1</math>, and 140 is a multiple of 7</li> <li>• <u>11</u> is not a factor, as <math>139 = 110 + 29</math>, and 29 is not a multiple of 11</li> </ul> <p>Elicit that no prime number more than 11 is possible either. e.g. 13:  BB: <math>13 \times 13 = 130 + 39 = 169</math>, and <math>169 &gt; 139</math>  Agree that 139 is a <u>prime number</u> and its only factors are 1 and 139.</p> <p>b) Let's <u>define</u> 139 in different ways.  Ps dictate definitions and class checks that they are correct and that the description is unique to 139.  (e.g. <math>1000 - 961</math>; 139% of 100; <math>1.39 \times 100</math>; 1H + 39U, <math>556 \div 4</math>; etc.)</p> <p style="text-align: right;"><i>8 min</i></p>	<p><b>Notes</b></p> <p>Whole class activity  Elicit method for checking prime numbers.  T directs Ps' thinking if necessary.  At a good pace  Agreement, praising  Ps use easy known multiples.</p> <p>BB: <math>139 = 1 \times 139</math></p> <p>Checking, agreement  Praising, encouragement only  Extra praise for unexpected definitions</p>
<p><b>2</b></p>	<p><b>Probability 1</b></p> <p>T has probability scale drawn on BB.</p> <p>BB:</p>  <p>Let's think of outcomes for each of these probabilities. If necessary, T helps with the context, but Ps think of the appropriate outcomes. e.g.</p> <p>a) In a lottery, one number is drawn from the numbers 1, 2, 3 and 4. Each of the numbers has an equal chance of being drawn.</p> <p>Ps: The probability of 'drawing 1' is <math>\frac{1}{4}</math>. (same for 2, 3 and 4)</p> <p>The probability of 'drawing 1 <u>or</u> 2' is <math>\frac{1}{2}</math>. (or 'an odd number')</p> <p>The probability of '<u>not</u> drawing 1' is <math>\frac{3}{4}</math>. (or '1 <u>or</u> 2 <u>or</u> 3')</p> <p>The probability of 'drawing 5' is 0. (or 'drawing 1 <u>and</u> 2', etc.)</p> <p>The probability of 'drawing a number <u>not</u> greater than 4' is 1.</p> <p>b) In an interntional summer camp, there are 100 children; 25 are from Denmark, 50 are from England, and 25 are from France. All their names are put into a computer and the computer picks 1 name at random for a special task.</p> <p>Ps: e.g. The probability that the child is:</p> <ul style="list-style-type: none"> <li>• Danish is <math>\frac{1}{4}</math> (25%)</li> <li>• English is <math>\frac{1}{2}</math> (50%)</li> <li>• <u>not</u> French <math>\frac{3}{4}</math> (75%)</li> <li>• Russian is 0 (0%)</li> <li>• Danish or English or French is 1 (100%).</li> </ul> <p>etc.</p> <p style="text-align: right;"><i>15 min</i></p>	<p>Whole class activity  Drawn on BB or SB or OHT</p> <p>Ps could be given time to discuss it with their neighbour first.  T intervenes only if Ps are struggling.  Reasoning, agreement, praising  Extra praise for creativity in contexts and ideas for the probabilities  Encourage Ps to use the logic words:  'and', 'or', 'not', 'nor'</p> <p>Elicit also if an outcome is impossible, unlikely, likely or certain to happen.</p>

<b>Y5</b>		<i>Lesson Plan 139</i>
<p><b>Activity</b></p> <p><b>3</b></p>	<p><b>Probability 2</b></p> <p>In a number card game, the numbers 1, 2, 3, 4 and 5 are placed face down on the table and mixed around, then a player picks up 2 cards at random.</p> <p>Let's suppose that each number has an equal chance of being picked.</p> <p>a) <i>How many possible outcomes are there, if the order in which they are picked up does not matter?</i></p> <p>If possible, Ps try it first, either in pairs on desks, or at front of class, and note the different outcomes in their <i>Ex. Bks.</i></p> <p>Then they dictate the outcomes to T who writes on BB in a logical order. Class points out any missed.</p> <p>BB: 1, 2   2, 3   3, 4   4, 5              1, 3   2, 4   3, 5            Agree that there are              1, 4   2, 5                    <u>10</u> possible outcomes.              1, 5</p> <p>b) <i>What are the probabilities of these outcomes?</i></p> <p>i) The two numbers picked up are the 5 <u>and</u> the 2. (<math>\frac{1}{10}</math> or 10%)</p> <p>ii) One of the numbers picked up is the 3. (<math>\frac{4}{10} = \frac{2}{5}</math> or 40%)</p> <p>iii) One of the numbers picked up is the 5 <u>or</u> the 2 (<math>\frac{7}{10}</math> or 70%)</p> <p><b>Extension</b></p> <p>What if the order <u>did</u> matter? How many outcomes would there be? What would the probabilities be then?</p> <p>Elicit that there would be <u>20</u> possible outcomes (the 10 shown above and then each pair reversed) but the probabilities would be the same.</p> <p style="text-align: right;"><i>21 min</i></p>	<p><b>Notes</b></p> <p>Whole class activity</p> <p>Ideally, Ps have the 5 number cards on desks.</p> <p>Or T could put the number cards in an opaque bag and Ps draw them out with their eyes closed.</p> <p>At a good pace</p> <p>Agreement, praising</p> <p>Ps could show probabilities on scrap paper or slates in unison on command.</p> <p>Ps responding correctly explain to Ps who were wrong.</p> <p>Discussion, listing of outcomes, then counting the frequency. e.g.</p> <p>i) <math>p</math> (one card is the 3):</p> $\frac{8}{20} = \frac{4}{10} \rightarrow 40\%, \text{ etc.}$
<p><b>4</b></p>	<p><b>Outcomes</b></p> <p>This time, the same cards: 1, 2, 3, 4 and 5 are placed face down on the table and mixed around. Then the player picks up one card at random, notes its number and <u>puts it back</u> face down on the table. The cards are mixed around, then the player picks up the 2nd card at random and notes the number.</p> <p>a) <i>How many possible outcomes are there, if the order does not matter?</i></p> <p>Ps try to dictate the different outcomes to T in a logical order without doing the experiment. Class points out any missed.</p> <p>BB: 1, 1   2, 2   3, 3   4, 4   5, 5              1, 2   2, 3   3, 4   4, 5            Agree that there are              1, 3   2, 4   3, 5                    <u>15</u> possible outcomes.              1, 4   2, 5                         (but <u>not</u> equal probability, as there are two              1, 5                                 ways of getting, e.g. 1 and 2 (1, 2) and (2, 1)          but only one way of getting, e.g. 1, 1))</p> <p>b) <i>How many possible outcomes are there if the order <u>does</u> matter?</i></p> <p>BB: 1, 1   2, 1   3, 1   4, 1   5, 1              1, 2   2, 2   3, 2   4, 2   5, 2            Agree that there are              1, 3   2, 3   3, 3   4, 3   5, 3            <u>25</u> possible outcomes.              1, 4   2, 4   3, 4   4, 4   5, 4            (and each has equal              1, 5   2, 5   3, 5   4, 5   5, 5            probability)</p> <p style="text-align: right;"><i>27 min</i></p>	<p>Whole class activity</p> <p>T demonstrates while explaining.</p> <p>At a fast pace</p> <p>Agreement, praising</p> <p>[If possible, use a computer simulation.]</p> <p><b>To Ts only:</b></p> <p>Using the listing in b), where the outcomes have equal probability:</p> <p>i) <math>p</math> (5 <u>and</u> 2) = <math>\frac{2}{25} \rightarrow 8\%</math></p> <p>ii) <math>p</math> (one card is 3)</p> $= \frac{9}{25} \rightarrow 36\%$ <p>iii) <math>p</math> (one card is 5 <u>or</u> 2)</p> $= \frac{16}{25} \rightarrow 64\%$

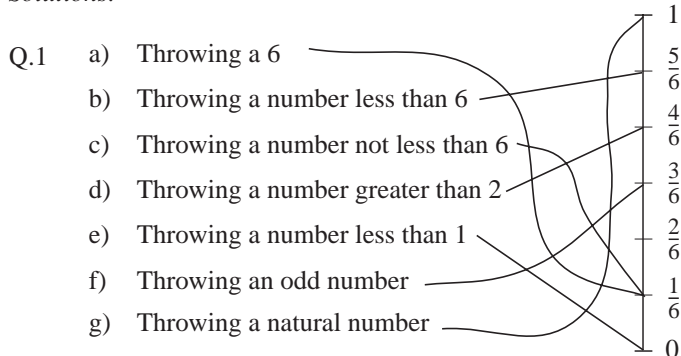

<b>Y5</b>		<i>Lesson Plan 139</i>
<p><b>Activity</b></p> <p><b>4</b></p>	<p><i>PbY5b, page 139</i></p> <p>Q.1 Read: <i>In a lottery game, two numbers are drawn from the numbers 1, 2, 3 and 4.</i></p> <p><i>Let's suppose that each number has an equal chance of being drawn.</i></p> <p>Deal with part a) first, then parts b) and c). Set a time limit. Ps read questions themselves and write the answers in <i>Pbs</i>.</p> <p>Review with whole class. Ps come to BB or dictate to T. Class agrees/disagrees. Mistakes discussed and corrected.</p> <p><i>Solution:</i></p> <p>a) <i>List the possible outcomes if the order of the two numbers does not matter.</i></p> <p>(1, 2), (1, 3), (1, 4), (2, 3), (2, 4), (3, 4) [6 outcomes]</p> <p>b) <i>What is the probability of these outcomes?</i></p> <p>i) The numbers are <b>1 and 3</b>. <math>\left(\frac{1}{6}\right)</math></p> <p>ii) One of the numbers is 2. <math>\left(\frac{3}{6} = \frac{1}{2}\right)</math></p> <p>iii) One of the numbers is either 1 <b>or</b> 3. <math>\left(\frac{5}{6}\right)</math></p> <p>c) <i>List the possible outcomes if the order of the two numbers does matter.</i></p> <p>(1, 2), (1, 3), (1, 4); (2, 1); (2, 3), (2, 4); (3, 1), (3, 2), (3, 4); (4, 1), (4, 2), (4, 3) [12 outcomes]</p> <p>What are the probabilities of the outcomes in b)?</p> <p>(The same: i) <math>\frac{2}{12} = \frac{1}{6}</math> ii) <math>\frac{6}{12} = \frac{1}{2}</math> iii) <math>\frac{10}{12} = \frac{5}{6}</math>)</p> <p style="text-align: center;"><i>33 min</i></p>	<p><b>Notes</b></p> <p>Individual work, monitored, helped</p> <p>T stresses that the 2 numbers are drawn at the same time.</p> <p>Discussion, reasoning, agreement, self-correction, praising</p> <p>Feedback for T</p> <p>More able Ps can be asked for decimals and percentages too.</p> <p><b>Extension</b> (for quicker Ps)</p> <p>iv) Neither of the two numbers is 1 or 3.</p> $\left(1 - \frac{5}{6} = \frac{1}{6}\right)$ <p>Agreement, praising</p>
<p><b>5</b></p>	<p><i>PbY5b, page 139</i></p> <p>Q.2 Read: <i>This time the numbers 1, 2, 3 and 4 are written on cards and put into a bag.</i></p> <p><i>A pupil takes out one card with his eyes shut, notes the number and puts it back into the bag again. Then the pupil takes out a 2nd card in the same way and notes the number.</i></p> <p>a) <i>List the possible outcomes if the order of the two numbers does not matter.</i></p> <p>b) <i>List the possible outcomes if the order of the two numbers does matter.</i></p> <p>Deal with one part at a time. Set a time limit. Encourage logical listing.</p> <p>Review with whole class. Ps come to BB or dictate to T. Class points out any missed combination. Mistakes corrected.</p>	<p>Individual work, monitored, (helped)</p> <p>Demonstrate the game with a P at front of class if necessary.</p> <p>Discussion, reasoning, agreement, self-correction, praising</p>

<h1 style="text-align: center;">Y5</h1>		<p><i>Lesson Plan 139</i></p>
<p><b>Activity</b></p> <p style="text-align: center;">5</p> <p><b>Extension</b></p>	<p>(Continued)</p> <p><i>Solution:</i></p> <p>a) 1, 1   2, 2   3, 3   4, 4      (<u>10</u> possible outcomes, 1, 2   2, 3   3, 4                      but <u>not</u> equal probabilities) 1, 3   2, 4 1, 4</p> <p>b) 1, 1   2, 1   3, 1   4, 1                      (<u>16</u> possible outcomes, 1, 2   2, 2   3, 2   4, 2                      with equal probabilities) 1, 3   2, 3   3, 3   4, 3 1, 4   2, 4   3, 4   4, 4</p> <p>Using the listing in b), what are the probabilities of these outcomes?</p> <p>i) The two cards are 1 <u>and</u> 3.      <math>(\frac{2}{16} = \frac{1}{8})</math></p> <p>ii) There is at least one 2.      <math>(\frac{7}{16})</math></p> <p>iii) The two cards are 1 <u>or</u> 3.      <math>(\frac{12}{16} = \frac{3}{4})</math></p> <p>iv) The two cards are 2 and 2.      <math>(\frac{1}{16})</math></p> <p style="text-align: right;"><i>39 min</i></p>	<p style="text-align: center;"><b>Notes</b></p> <p>T elicits/explains the unequal probability in the listing in a). [There is only one way of getting, e.g. 1 and 1, but there are 2 ways of getting, e.g. 1 and 2 in any order, (1, 2) and (2, 1), so the outcome '1 and 2' is more likely than the outcome '1 and 1'.</p> <p>[If possible, use a computer simulation to show it.]</p> <p>Whole class activity (Ps could show on slates or scrap paper in unison.) Ps with different responses explain reasoning. Class decides on correct probability. Extra praise if Ps give % too.</p>
<p style="text-align: center;">6</p> <p><b>Extension</b></p>	<p><i>PbY5b, page 139</i></p> <p>Q.3 Read: <i>Eight children have written their names on a wheel of fortune. The fortune teller spins the wheel to see who is to be chosen to have their fortunes told.</i></p> <p><i>Let's suppose that each letter has an equal chance of coming to rest in front of the arrow and that the wheel cannot stop on the lines between the letters.</i></p> <p><i>What is the probability of each of these outcomes?</i></p> <p>Set a time limit. Review with whole class. Ps could show responses on scrap paper or slates on command. Ps answering correctly explains to Ps who were wrong. Mistakes discussed and corrected.</p> <p>Show each probability on a probability scale and ask Ps to express them as a decimal and percentage too.</p> <p><i>Solution:</i></p> <p>a) A wins. b) D wins      <math>(\frac{1}{8})</math>      [= 0.125 → 12.5%]</p> <p>c) B <u>and</u> G win.      (0)      [Impossible!]</p> <p>d) F does <u>not</u> win.      <math>(1 - \frac{1}{8} = \frac{7}{8})</math> [= 0.875 → 87.5%]</p> <p>e) C <u>or</u> H wins.      <math>(\frac{2}{8} = \frac{1}{4})</math>      [= 0.25 → 25%]</p> <p>f) Neither C <u>nor</u> H wins.      <math>(1 - \frac{1}{4} = \frac{3}{4})</math> [= 0.75 → 75%]</p> <p>i) E either wins <u>or</u> doesn't win. (1) [→ 100%] Certain!</p> <p style="text-align: right;"><i>45 min</i></p>	<p>Individual work, monitored, helped (or whole class activity)</p> <p>Drawn on BB or use enlarged copy master or OHP</p> <p>BB:</p>  <p>Reasoning, agreement, self-correction, praising</p> <p>Scale drawn on BB or SB or OHT:</p>  <p>The winning name's initial letter comes :</p> <p>g) <u>after</u> C in the alphabet; (i.e. D, E, F, G, H)</p> <p><math>(\frac{5}{8})</math> [= 0.625 → 62.5%]</p> <p>h) <u>before</u> C in the alphabet. (i.e. A, B)</p> <p><math>(\frac{2}{8} = \frac{1}{4})</math> [= 0.25 → 25%]</p>
