

x	-3	-2	-1	0	1	2	3	4	5	6
$2 \times x - 1$										

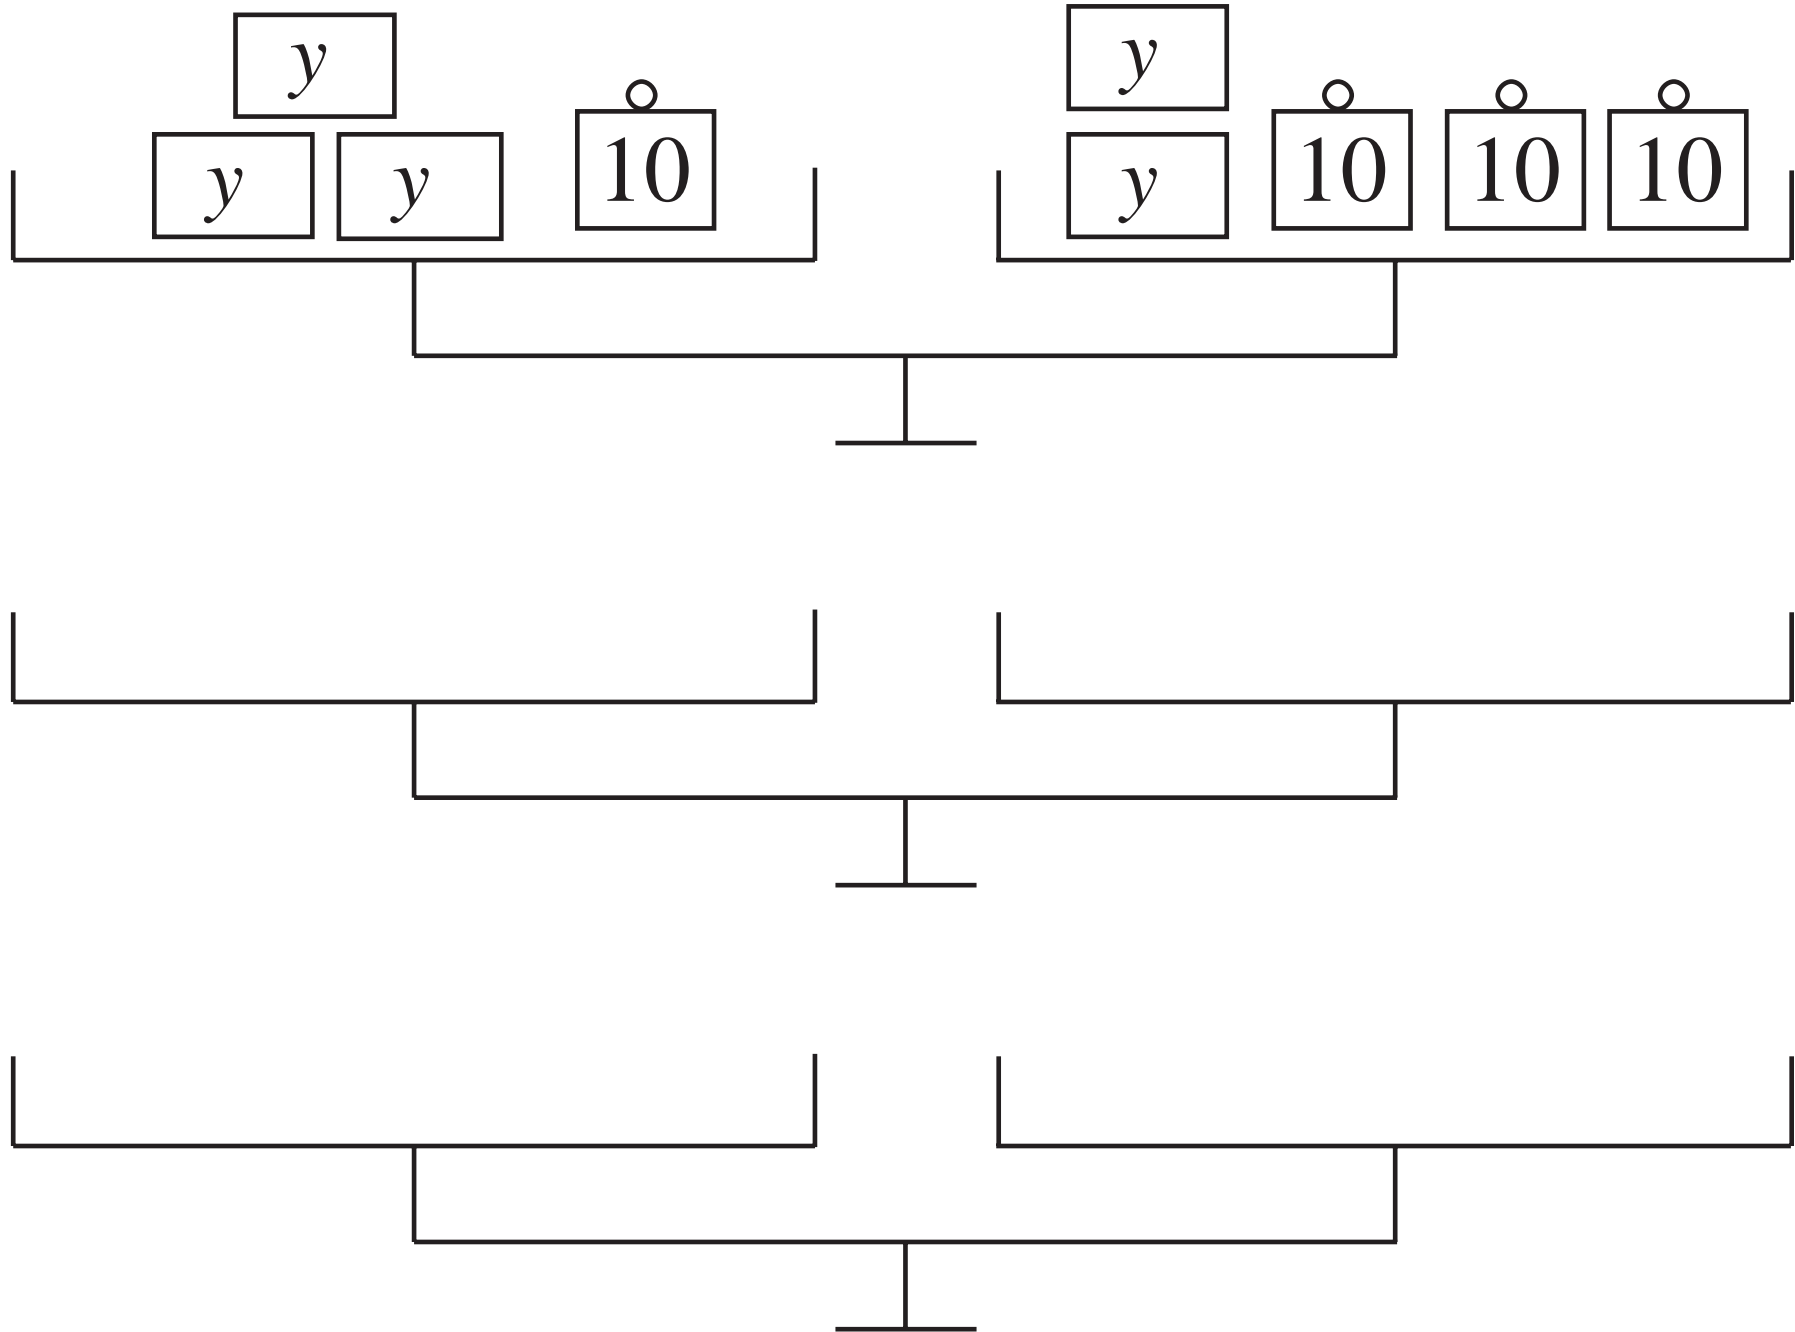

- a) the area of a rectangle with sides a and b
- b) the perimeter of a rectangle with sides e and f
- c) the area of a square with side c
- d) the perimeter of a square with side t
- e) the area of a square with diagonal e
- f) the surface area of a cube with edge c
- g) the volume of a cube with edge a
- h) the volume of a cuboid with edges a, b, c .

d) $-2 \square -1$ but $2 \square 1$

e) $0 \square 2$ but $0 \square -2$

f) $0 \square -2.5$ but $0 \square 2.5$

- a) A **cuboid** has 8 vertices, 6 faces and 10 edges.
- b) Every **cube** has 6 faces, 8 vertices and 12 edges.
- c) A **circle** is a 2-dimensional shape.
- d) A **line segment** is a 2-D shape.
- e) Every cuboid is a **prism**.
- f) Any prism is a cuboid.
- g) If the diagonals of a quadrilateral are equal and **bisect** each other, the quadrilateral is a rectangle.
- h) If a quadrilateral has 2 lines of symmetry, it is a **rhombus**.

- a) Every **isosceles triangle** has angles of 60° .
- b) No **rectangle** has adjacent equal sides.
- c) The **diameter** of a circle is twice the length of its radius.
- d) The **circumference** of a circle is its radius multiplied by π .
- e) There is a **prism** which has congruent faces.
- f) A square-based **pyramid** has 5 vertices, 5 faces and 8 edges.
- g) If the diagonals of a quadrilateral **bisect** each other at right angles, the quadrilateral is a **rhombus**.
- h) A **tangent** to a circle can touch the circle at more than 1 point.

- a) The **product** of two numbers can be less than each of the two numbers.
- b) The **arithmetic mean** of two negative numbers can be positive.
- c) There is an **isosceles** triangle which has two right angles.
- d) There is a positive fraction less than 1 which is equal to its **reciprocal**.
- e) If a **product** is zero, at least one of its factors is zero.
- f) If the areas of two triangles are equal, the triangles are **congruent**.
- g) There is a quadrilateral which is both a **deltoid** and a **parallelogram** but is not a square.

$$\text{a) } a + (-b) - (+c) - (-d) =$$

- a) If the areas of two rectangles are equal, the rectangles are **congruent**.
- b) All equilateral triangles are **similar**.
- c) The **arithmetic mean** of two numbers is always positive.
- d) There is an **isosceles** triangle which has three equal angles.
- e) The diagonals of a **parallelogram** intersect at right angles.
- f) If the areas of two squares are equal, the squares are **congruent**.
