

<p><i>Codes and Ciphers</i></p>	<p><b>UNIT 17 Huffman Codes</b>      Lesson Plan 1</p>																									
<p><b>Activity 1</b></p>	<p><b>Introduction</b></p> <p>T: Does anyone know anything about ASCII computer codes? ( ? )</p> <p>T: They are used by computers to represent letters, numbers, etc. Look at this sheet – what do you notice? (Each character uses 7 'bits' of 0 or 1)</p> <p>T: That's right. How many different characters can be coded with this system? <math>(2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 = 2^7 = 128)</math></p> <p>T: Is this an efficient way to transmit messages/data, etc? ( ? )</p> <p>T: Can you think of a better way? (Use shorter codes for letters which occur more frequently)</p> <p>T: This is the basis of Huffman codes.</p> <p style="text-align: right;">5 mins</p>	<p style="text-align: center;"><b>Notes</b></p> <p>T: Teacher P: Pupil Ex.B: Exercise Book</p> <p>T builds on Ps' knowledge of computer codes, if possible.</p> <p><b>OS 17.1</b> is shown, or Ps are each given a copy.</p> <p>T introduces, interactively, the concept of compressing data, etc. for internet transmission.</p>																								
<p><b>2</b></p>	<p><b>Huffman code</b></p> <p>T: We'll look at how this works when we use just 5 letters</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <p>E A M N T</p> </div> <p>which are given in decreasing order of frequency of use.</p> <p>T: We use a tree diagram to illustrate the code, with '0' to the right of the branches and '1' to the left – look at the diagram.</p> <p>T: How many codes are there? (5)</p> <p>T: What are the codes? (1, 00, 010, 0110, 0111)</p> <p>T: How do you think we allocate these? (Shortest code for the letter with the highest frequency, etc.)</p> <p>T: OK. Who can complete the table?</p> <table style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: left;">P (on board):</th> <th style="text-align: center;"><u>Code</u></th> <th style="text-align: center;"><u>Letter</u></th> <th style="text-align: center;"><u>Length</u></th> </tr> </thead> <tbody> <tr> <td></td> <td style="text-align: center;">1</td> <td style="text-align: center;">E</td> <td style="text-align: center;">1</td> </tr> <tr> <td></td> <td style="text-align: center;">00</td> <td></td> <td></td> </tr> <tr> <td></td> <td style="text-align: center;">010</td> <td></td> <td></td> </tr> <tr> <td></td> <td style="text-align: center;">0110</td> <td></td> <td></td> </tr> <tr> <td></td> <td style="text-align: center;">0111</td> <td></td> <td></td> </tr> </tbody> </table> <p>T: Now that we have the codes, we can decode</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <p>0 1 1 1 0 0 0 1 0 1 0 1 0 0 0 0 1 1 0</p> </div> <p>T: Now work in pairs to decode</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <p>0 1 0 0 0 0 1 1 0 0 0 0 1 1 1 1 0 1 1 1 1 0 0</p> </div> <p>T: What did you get?</p> <p style="text-align: center;">Well done.</p> <p style="text-align: right;">20 mins</p>	P (on board):	<u>Code</u>	<u>Letter</u>	<u>Length</u>		1	E	1		00				010				0110				0111			<p>Ps' ideas should be used whenever possible here, but T will need to ensure that they produce a sensible Huffman code.</p> <div style="text-align: center;"> </div> <p>or <b>OS 17.2</b> can be used.</p> <p>Volunteer P, at board, completes the table. Other Ps watch and agree/disagree. T praises if correct.</p> <p>T shows code on board and Ps identify letters.</p> <p>Ps work in pairs for a few minutes to decode; T monitors progress. Interactive review of answers.</p>
P (on board):	<u>Code</u>	<u>Letter</u>	<u>Length</u>																							
	1	E	1																							
	00																									
	010																									
	0110																									
	0111																									
<p><b>3</b> <i>(continued)</i></p>	<p><b>Other Huffman codes</b></p> <p>T: Are other possible Huffman codes that we could use? ( ? )</p>	<p>Whole class discussion of possible codes for 5 letters. T should give Ps sufficient time to</p>																								

<p><b>Codes and Ciphers</b></p>	<p><b>UNIT 17 Huffman Codes Lesson Plan 1</b></p>	
<p><b>Activity 3</b></p> <p>(continued)</p>	<p>T: So we have three possible solutions. Which one should we use? (Depends on letter frequencies)</p> <p>T: Absolutely! When should we use</p>  <p>(When 3 letters have similar but higher frequency than the other 2)</p> <p>and this?</p>  <p>(When one letter is used much more than the other 4,</p> <p style="text-align: right;">35 mins</p>	<p><b>Notes</b></p> <p>think of all the possibilities. Ps display their suggestions. T can show <b>OS 17.3</b> if Ps do not suggest all these possibilities.</p> <p>T should try to get Ps to deduce the answers for themselves. The concept of length <math>\times</math> frequency can also be used (see <i>Pupil Text</i>) to make this more precise.</p>
<p><b>4</b></p>	<p><b>Activity</b></p> <p>T: Look at Activity 2 in the <i>Pupil Text</i>. Start with part a) and see how you get on. You can work with the person next to you for this.</p> <p>T: Who would like to give us an answer? Come and write one of your codes on the board.</p> <p>T: Does everyone agree that this is correct? Who would like to give us another code?</p> <p style="text-align: right;">45 mins</p>	<p>Ps work in pairs; T monitors work carefully to make sure that Ps have understood the concept and the problem.</p> <p>Review of part a) before Ps move on to part b).</p>
	<p><b>Homework</b></p> <p>Complete Activity 2, part b).</p>
