

## UNIT 10 *Public Key Cryptography*

## Overhead Slides

---

### **Overhead Slides**

10.1 General Routine

10.2 Encipher

10.3 Decipher

10.4 Modulo Division

---

## OS 10.1

*General Routine*

---

<i>General Routine</i>	<i>Example</i>
<ol style="list-style-type: none"><li>1. Choose two prime numbers, <math>p, q</math></li><li>2. Let <math>m = p \times q</math></li><li>3. Let <math>A = (p - 1) \times (q - 1)</math></li><li>4. Choose a number <math>E</math> which is less than <math>A</math> and has no factors in common with <math>A</math>.</li><li>5. Find a number <math>D</math> so that <math>(D \times E) - 1</math> is a multiple of <math>A</math>.</li></ol>	

---

## OS 10.2

*Encipher*

$m = 10, \quad E = 3, \quad D = 7$
------------------------------------

A	D	E	H	N	O	R	S	T
1	2	3	4	5	6	7	8	9

Message	
Number value	
Power of $E$	
Value	
Remainder on division by $m$	

CIPHER message :

## OS 10.3

*Decipher*

$$m = 10, \quad E = 3, \quad D = 7$$

A	D	E	H	N	O	R	S	T
1	2	3	4	5	6	7	8	9

Cipher message	
Power of $D$	
Value	
Remainder on division by $m$	
Letter	

MESSAGE :

## OS 10.4

*Modulo Division*

Algorithm to find  $26^{83} \pmod{115}$

$$26^2 \pmod{115} = \boxed{\phantom{00}}$$

$$26^4 \pmod{115} = \boxed{\phantom{00}}$$

$$26^8 \pmod{115} = \boxed{\phantom{00}}$$

$$26^{16} \pmod{115} = \boxed{\phantom{00}}$$

$$26^{32} \pmod{115} = \boxed{\phantom{00}}$$

$$26^{64} \pmod{115} = \boxed{\phantom{00}}$$

In power of 2,

$$83 = 64 + \boxed{\phantom{00}} + \boxed{\phantom{00}} + \boxed{\phantom{00}}$$

So

$$26^{83} \pmod{115} = \boxed{\phantom{00}} \times \boxed{\phantom{00}} \times \boxed{\phantom{00}} \times \boxed{\phantom{00}}$$

$$= \boxed{\phantom{000000}} \pmod{115}$$

$$= \boxed{\phantom{00}}$$
